Crime inflicts a substantial toll on individuals, businesses, and communities. Understanding the total cost of crime—which includes costs related to lost quality of life, general fear, and other intangibles, in addition to the more obvious costs related to lost property, incarceration, and the like—can help cities decide how best to invest their crime-control dollars. RAND’s Cost of Crime Calculator lets city leaders and residents calculate the total cost of crime in their communities and assess the potential value of hiring additional police officers. The calculator can be found at http://cqp.rand.org/cost-of-crime.

The Cost of Crime AMERICANS MORE THAN $300 BILLION IN 2010
