

ACKNOWLEDGEMENTS

The research reported here was supported by a grant from the Public Policy Institute of California (PPIC) and by the Institute for Civil Justice (ICJ). We are particularly grateful to Deborah Hensler and Alan Charles, past and present ICJ Directors, respectively, for their advice and support at various stages of the project.

We are indebted to several other individuals who contributed time and energy to help us. Robert Cenzer extracted data for us from the California Energy Commission (CEC)/Department of Motor Vehicles vehicle database, and Gary Occhiuzzo of the CEC provided supplementary information about these data. Jeff Long of the California Air Resources Board helped us understand, access, and use the EMFAC2000 model. Meg Bernhardt and Jennifer Pace of RAND provided extensive and expert research and programming assistance, respectively. Beth Giddens and Miriam Polon of RAND helped make the document more readable. Joanna Nelsen, Sandy Petitjean, Sophia Washam, and Nikki Wickham of RAND provided invaluable help in producing the manuscript.

The report has also benefited from comments by seminar participants at PPIC and from comments on an earlier draft by Stephen Gould of the California Department of Consumer Affairs, Bureau of Automotive Repair; Chris Kavalec of the CEC; Bob Reville of RAND; Michael Teitz of PPIC; and Mary Vaiana of RAND. Finally, Don Fullerton (University of Texas), Susan Gates (RAND), Jon Haveman (Purdue University), and Virginia McConnell (Resources for the Future) provided thoughtful and constructive technical reviews.
