
ACKNOWLEDGMENTS

We thank our sponsors at the Casey Family Programs and the Substance Abuse and Mental Health Services Administration (SAMHSA) for their support of this project. We especially acknowledge the valuable guidance we received from Peter Pecora at the Casey Family Programs, and Michelle Basen and Patricia Salomon from the Office on Early Childhood at SAMHSA. We also benefited from discussions with a number of cost and outcome analysis experts who specialize in mental health and substance abuse interventions. In particular, we thank Anthony Broskowski (President, Pareto Solutions), William A. Hargreaves (University of California, San Francisco), Brenda Reiss-Brennan (President, Primary Care Family Therapy Clinics, Inc.), and Brian T. Yates (American University). These four individuals served as expert panelists for a two-day meeting convened by RAND in August 2000 to discuss the potential use of cost-benefit analysis or related methods in the analysis of subsequent knowledge development and application studies of the *Starting Early Starting Smart* (SESS) program, a public-private initiative funded and directed through SAMHSA and the Casey Family Programs. This document was shaped by the insights they offered during and after the meeting. In addition, we benefited greatly from information about the current SESS evaluation provided by Fred Springer and his colleagues at EMT Associates, which serves as the SESS Data Coordinating Center. The perspectives on the SESS program offered by David Deere and Karen Rossmair from the Russellville, Arkansas, site, and Miriam Escobar and K. Lori Hanson from the Miami, Florida, site were also insightful. Other participants at the meeting from SAMHSA and the Casey Family Programs provided useful input.

We thank RAND colleague James Chiesa for writing the summary of this report and providing us with outstanding comments on an earlier draft. We are also grateful for the careful technical reviews provided by our RAND colleagues Carole Roan Gresenz and Shin-Yi Wu. Other valuable comments on the draft report were provided by Richard Boyle and Mark Friedman. Finally, we also thank Patrice Lester and Claudia Szabo of RAND for their very able assistance with the assembly and production of the document.
