ABOUT THE AUTHORS

Bruce W. Bennett (Ph.D., policy analysis, RAND Graduate Institute for Public Policy Analysis) is a senior analyst and professor of policy analysis at RAND. His research interests include military strategy and force planning, countering proliferation of weapons of mass destruction, Korea, and the Persian Gulf.

Nurith Berstein (Masters in public administration, Carleton University, Ottawa, Canada) is a researcher at RAND specializing in national and international security policy issues.

Frank Camm (Ph.D., economics, University of Chicago) leads research at RAND on high-level Army resource management issues associated with force structure design, logistics policy, and acquisition of combat service support services.

David S.C. Chu (Ph.D., economics, Yale University) has served in a variety of RAND and national security government posts.

Paul K. Davis (Ph.D., chemical physics, Massachusetts Institute of Technology) is a senior scientist and research leader at RAND. His research encompasses a number of areas, including strategic defense planning, future forces and force transformation, and advanced modeling and simulation. He is a professor at the RAND Graduate School; a member or former member of the Naval Studies Board of the National Research Council, the Defense Science Board, and the U.S. SALT Delegation; and author of numerous books and studies.

Daniel B. Fox (Ph.D., operations research, University of Illinois) is a senior operations research analyst at RAND. His focus is the design

and application of computer simulations for analysis of complex military operations. Dr. Fox has over 30 years of experience in military operations analysis.

James R. Hosek (Ph.D., economics, University of Chicago) is a senior economist at RAND, editor-in-chief of the *RAND Journal of Economics*, RAND Graduate School professor, and former director of RAND's Defense Manpower Research Center.

Stuart E. Johnson (Ph.D., physical chemistry, Massachusetts Institute of Technology) was a senior scientist at RAND when this research was completed. He has many years of experience in defense planning and analysis at the Department of Defense, NATO headquarters, and in private industry.

Martin C. Libicki (Ph.D., city and regional planning, University of California, Berkeley) is a senior policy analyst at RAND whose areas of expertise include the application of information technology to national security.

David Mussington (Ph.D., political science, Carleton University) is a political scientist at RAND. Among his areas of expertise are critical infrastructure protection, information and technology security, and counterterrorism and cyberterrorism.

Stuart H. Starr (Ph.D., electrical engineering, University of Illinois) is the Director of Plans at The MITRE Corporation; his areas of expertise include the assessment of information systems in the context of national security missions.

Harry J. Thie, (Doctorate, business administration, George Washington University) is a senior management scientist at RAND whose research explores military career management and defense organization, manpower, personnel, and training.

Gregory F. Treverton (Ph.D., economics and politics, Harvard University) is a senior policy analyst at RAND. He has worked on intelligence and on Europe for Congress, the White House and the National Intelligence Council; his current research interests also include Asia and public-private partnerships.
