The Health Related Behaviors Survey (HRBS) is the U.S. Department of Defense (DoD)'s flagship survey for understanding the health, health-related behaviors, and well-being of active-duty service members.

- It allows leadership to better understand the readiness of the force.
- It is used to facilitate benchmarking in combination with Healthy People benchmarks (designed for the general U.S. population).
- Results are weighted to represent the 2015 active-duty force by service branch, age, pay grade, and gender.

Comparison to U.S. General Population

The 2015 HRBS shows that active-duty service members generally have better health and health-related behaviors than the U.S. adult population. Exceptions include binge and hazardous alcohol use, common mental health conditions, and sleep problems.

Comparison of respondents to the general U.S. population shows that active-duty service members:
- Generally have better health and related behaviors.
- Are better understood.
- Are used to facilitate benchmarking in combination with Healthy People benchmarks (designed for the general U.S. population).

Limitations

A low overall response rate (8.6%) suggests that the results should be interpreted with caution and in conjunction with other existing data. New ways to improve survey response rates are needed, including focusing survey content, shifting to a confidential rather than anonymous survey, and addressing information technology issues related to use of a non-DoD email address.

The above comparisons to the general adult population do not control for differences in demographic composition.

How well are service members taking care of themselves—Are they living healthy?
Results from 16,699 respondents across the Air Force, Army, Marine Corps, Navy, and Coast Guard

---

Weight and sleep issues

- 29.9% were moderately or severely bothered by sleep-related lack of energy
- 8.6% took sleep medications daily or almost daily
- 65.7% were overweight or obese according to body mass index
- 56.3% reported less sleep than needed

Mental and Emotional Health

- 9.4% met survey criteria for probable depression
- 14.2% met survey criteria for probable generalized anxiety disorder
- 8.5% met survey criteria for probable posttraumatic stress disorder
- 6.3% thought about attempting suicide in the past year
- 1.4% reported a suicide attempt in the past year
- 29.7% reported a self-perceived need for mental health services in the past year
- 17.4% reported that someone else told them they needed mental health treatment in the past year

Physical Health and Functional Limitations

- 38.6% reported diagnosis of at least one of nine chronic medical conditions (e.g., high blood pressure) in their lifetime
- 35.7% reported that pain bothered them a lot over the past 30 days
- 42.5% reported a functional impairment in at least one domain—work or school, social life, or family life

Sexual Behavior and Health

- 19.4% had more than one sex partner in the past year
- 36.7% had sex with a new partner without a condom in the past year
- 1.7% reported contracting a sexually transmitted infection in the past year
- 20.9% were at high risk for human immunodeficiency virus (HIV)
- 19.4% of those not expecting or trying to conceive a child had vaginal sex without using birth control in the past year
- 2.4% reported having or causing an unintended pregnancy in the past year

Sexual Orientation, Transgender Identity, and Health

- 6.1% identified as lesbian, gay, bisexual, or transgender (LGBT)

Deployment Experiences and Health

- Among those who had deployed:
  - 64.9% reported exposure to combat trauma
  - 27.7% reported a deployment-related injury
  - 11.9% screened positive for deployment-related mild traumatic brain injury
  - 8.6% reported deployment-related postconcussive symptoms
  - 67.6% reported substance use, mostly alcohol or cigarettes, during their most-recent deployment

- Among those deployed in the past three years:
  - 10.4% met survey criteria for probable depression
  - 15.0% met survey criteria for probable generalized anxiety disorder
  - 9.9% met survey criteria for probable posttraumatic stress disorder

- 37.8% reported chronic pain

Substance Use

- Alcohol, Tobacco, Illicit Drugs, and Prescription Drugs
- 30.0% binge drank in the past month (5+ drinks for men or 4+ for women in one sitting)
- 5.4% were heavy drinkers (5+ drinks 5 or more times in the past month)
- 68.2% viewed military culture as supportive of drinking
- 13.9% were current cigarette smokers
- 12.7% were current smokeless tobacco users
- 12.4% reported using e-cigarettes in the past month
- 0.7% reported illicit drug use (mostly marijuana or synthetic cannabis) in the past year
- 4.1% used prescription drugs without a valid prescription (i.e., prescription drug misuse) in the past year
- 0.9% used more of a drug than prescribed (i.e., prescription drug overdose) in the past year
