TABLES

I.1 Clinical Areas in QA Tools System By Covered Population Group

I.2 Dates Expert Panels Convened

I.3 Distribution of Indicators (%) by Level of Evidence

I.4 Distribution of Indicators (%) by Type of Care

I.5 Distribution of Indicators (%) by Function of Medicine

I.6 Distribution of Indicators (%) by Modality

I.7 Estimated Proportion of Ambulatory Care Conditions to be Evaluated in the QA Tools Indicator System, Based on 1993 NAMCS Data

I.8 Distribution of Final Set of Pediatric Indicators by

I.9 Distribution of Pediatric Indicators by Strength of Evidence

1.1 Guidelines for the Treatment of Acne

2.1 Descriptors for Interventions (Continuous Variables) Reporting Results 12 Months After Initiation of Intervention

2.2 Cytopathology Reporting Systems for Pap Smears

4.1 Diagnosis of Asthma

4.2 Classification of Asthma by Severity of Disease

4.3 Four-Level Staging of Asthma Severity

4.4 Guidelines for Measuring PEFR in Children in Different Settings

4.5 Predicted Average Peak Expiratory Flow for Normal Children and Adolescents

5.1 Diagnostic Criteria for Attention-Deficit/Hyperactivity Disorder

10.1 WHO Factors For Assessing Hydration Status

10.2 Northrup and Flanigan Factors For Assessing Hydration Status

15.1 Classification of Otitis Media

15.2 Prevalence of Otitis Media by Age

21.1 Operating Characteristics of Common Diagnostic Tests for Vaginal and Cervical Infection

22.1 Comparison of Components of the Newborn Examination Recommended by Four Sources
