This study has benefited from the comments, suggestions, and corrections provided by several colleagues over the course of its development. Of particular importance were contributions by Thomas Ahlfeld, Department of Interior; Timothy Boyd, Oregon State University; Garrett Brass, Arctic Research Commission; Jeff Cohen, Naval Underwater Warfare Center; Dennis Conlon, Office of Naval Research; Captain Chris Gunderson, U.S. Naval Observatory; John Haines, U.S. Geological Survey; Pete Johnson, National Research Council; Charles Langmuir, Columbia University; Rear Admiral (ret) Michael McDevitt, Center for Naval Analyses; Sujata Millick, Office of Naval Research; George Newton, Arctic Research Consortium; Paul Pan, Environmental Protection Agency; Rear Admiral P. J. Ryan, U.S. Atlantic Fleet; Gene Smith, National Oceanic and Atmospheric Administration; and Cindy Van Dover, College of William and Mary.

Design teams from NAVSEA, Newport News, and Electric Boat were essential to the success of the study. We also thank the Office of Naval Intelligence and former officers in charge of the NR-1, including Captains Don Randall and Dave Olivier and Vice Admiral E. P. Giambastiani, for their insights. We also thank the Woods Hole Oceanographic Institute. Several RAND colleagues, including Jim Bonomo, Bruce Berkowitz, Martin Libicki, Kevin O’Connell, and Mike Wermuth, provided valuable insight and analysis.

This study was formally reviewed by Ashton Carter of Harvard University and by Elliot Axelband of the University of Southern California. We have included as many of their comments and suggestions as possible. Jeffrey Sands of MITRE Corporation provided assistance.
during the first military conference, and Peter Vogt of NRL contributed valuable insights into several scientific issues. Mario Bagaglio contributed to this study as well. Audrey Caudle provided logistical and administrative support and helped to pull together many of the report’s charts and graphs.

However, the information, judgments, analyses, and recommendations contained in this study are entirely the responsibility of the authors.
