3.1. Analysis Sample: Schools That Were Implementing in Both 1997 and 1998, with Complete Data in Both Years ................................................................. 22
3.2. A Comparison of Respondents and Nonrespondents in the Longitudinal Sample in 1999, Based on 1998 Data ................................................................. 24
3.3. Distribution of the 1999 Longitudinal Sample, by Jurisdiction and Design Team ............... 25
3.4. Selected School Characteristics, by Jurisdiction ........ 26
4.2. Means of the Core Implementation Index and Its Components, by Number of Years of Implementation, 1997–1999 ......................................................... 40
5.1. Descriptive Statistics of Variables in Multilevel Analysis ............................................... 53
5.2. Multilevel Results for the Relationships of Implementation to Teacher-, School-, and Design-Related Factors ......................................................... 59
5.3. Variance in Implementation Explained by the Model ...................................................... 65
6.1. Factors Contributing to the Decision to Drop the NAS Design ......................................... 68
B.1. 1997 Target Sample for RAND’s Longitudinal Sample: Principal Interviews and Teacher Surveys .... 83
C.1. Table of Standard Deviations for the Core Implementation Index and Its Components ........ 88
