## Preface

---

Air Force senior leadership has recognized the need for all airmen to possess a set of skills that will enable them to survive and operate in an expeditionary environment. This monograph provides results of three connected analyses toward proposed training changes to build the future expeditionary airman.

The first analysis used as its starting point a proposed training curriculum for common battlefield airman training (CBAT) developed by the Air Force Directorate of Operations (AF/A3O) and the Air Education and Training Command, Technical Training Division (AETC/A3T) for airmen within seven Air Force Specialty Codes (AFSCs) who operate outside the perimeter of an air base. These include combat controller technicians (combat control teams [CCTs]), pararescuemen (PJs), security forces (SF), terminal attack controllers, combat weathermen (battlefield weather teams [BWTs]), and specialties associated with explosive ordnance disposal (EOD) and survival, evasion, resistance, and escape (SERE). In this analysis, we examined how CBAT affects the existing curriculum for these seven AFSCs.

The second analysis used the results of the first to develop a CBAT plan of instruction (POI). Using this estimated POI, we computed CBAT resource requirements (e.g., training areas and devices, classrooms, and instructors) using the RAND Schoolhouse Model.<sup>1</sup>

The third analysis consisted of a survey of individuals in previously deployed, non-ground combat Air Force specialties to develop a list of incidents they faced in high-threat environments. Using these data, subject-matter experts were able to develop a list of training categories to prepare non-ground combat deployers for these situations.

This work was based on proposals the Air Force developed in 2005 and early 2006. The first two analyses document work related to concepts envisioned at that time. Since then, many of the proposals and much of the direction has changed. Nonetheless, we document our findings here because they may be useful in evaluating further revisions of the concepts. The third analysis is concept-independent, having value beyond that for any specific proposal for combat training for non-ground combat personnel.

This study was sponsored by AF/A3O and the Air Force Directorate of Security Forces (AF/A7S) and conducted within the Manpower, Personnel, and Training Program of RAND Project AIR FORCE for a fiscal year 2006 project, “Expeditionary Airmen Requirement Analysis.”

---

<sup>1</sup> The RAND Schoolhouse Model was developed under previous RAND Project AIR FORCE work. A description of the model can be found in Manacapilli and Bennett, 2006.

This monograph should be of interest to Air Force leaders and staffs concerned with developing expeditionary airmen.

### **RAND Project AIR FORCE**

RAND Project AIR FORCE (PAF), a division of the RAND Corporation, is the U.S. Air Force's federally funded research and development center for studies and analyses. PAF provides the Air Force with independent analyses of policy alternatives affecting the development, employment, combat readiness, and support of current and future aerospace forces. Research is conducted in four programs: Aerospace Force Development; Manpower, Personnel, and Training; Resource Management; and Strategy and Doctrine.

Additional information about PAF is available on our Web site:  
<http://www.rand.org/paf/>

## Summary

---

For this monograph, we conducted three separate but connected analyses in support of developing combat training for airmen. In the first analysis, we evaluated a proposed CBAT standard for Air Force specialties that routinely operate “outside the fence” against their current training programs.<sup>1</sup> In the second analysis, we used the results of our CBAT evaluation to build a strawman CBAT POI. We then used the RAND Schoolhouse Model to estimate the required resources. Finally, in the third analysis, we surveyed previously deployed “inside the fence” specialties to develop a list of incidents faced when deployed to high-threat environments. Using these incidents and training experts, we were able to develop a requirement for CBAT companion training for the “inside the fence” specialties.<sup>2</sup>

The first two analyses are specific to proposals developed in 2005 and early 2006.<sup>3</sup> The third analysis is concept-independent and is valuable for any proposal for combat training of non-ground combat personnel.

### CBAT Independent Evaluation Analysis

We developed three model courses that satisfied the training requirements for CBAT,<sup>4</sup> based primarily on training materials from the SF, CCT, or PJ curricula.<sup>5</sup> The estimated duration of each course exceeded a specified 25-day maximum. We therefore developed a fourth, minimum-duration course that satisfied the CBAT proficiency requirements for each task by

---

<sup>1</sup> Air Force personnel use the phrases *outside the fence* and *outside the wire* (OTW) interchangeably to indicate operations outside the defended perimeter of an Air Force installation. *Outside the fence* is more common at the Air Staff level. Focus group participants with deployment experience used *outside the wire*. Part of this difference may be due to the use of wire to demarcate the perimeter at deployed locations instead of the fences typical at an Air Force main operating base.

<sup>2</sup> *CBAT companion* is what the Air Force calls a just-in-time training program that it envisions non-ground combat personnel attending prior to deployment.

<sup>3</sup> At the time of our research, CBAT was a mature idea and the Air Force was not interested in a study of the relative value of CBAT or whether “common” training was even a good idea. The Air Force was attempting to implement CBAT immediately; therefore, the client’s primary interest was in the resource requirement. Since then, CBAT has changed dramatically. Still, the first two analyses will have value if the older plans, or something like them, are revisited.

<sup>4</sup> The original CBAT course training standard was developed by the Air Staff Battlefield Airmen Integrated Product Team.

<sup>5</sup> The CBAT program itself is intended for the following specialties: PJ, tactical air control party (TACP), CCT, BWT, SF, EOD, and SERE personnel.

using the standard of the specialty that supplied the fewest training hours. For the most part, the standards of the SF training curriculum met these requirements.

Developing these four models allowed us to accomplish two related goals. First, we determined the feasibility of providing the specified CBAT elements within a specified 25-day time frame. We found that only a course based primarily on the SF training curriculum will satisfy the specified 25-day duration.<sup>6</sup>

Second, for each AFSC, we identified the tasks and skill areas for which CBAT will provide training enhancements (i.e., where it will provide training of longer duration or to a higher standard than what each AFSC currently provides), those for which CBAT specifies less training than would ordinarily be provided in initial skills training (IST), and those for which further training in IST will be required to reach the proficiency for skill level 3. Generally, these proficiency deferrals are concentrated within the PJ and CCT specialties. Table S.1 summarizes the effect on all seven AFSCs using the minimum-duration model.

For the CBAT course to achieve the goal of improving combat preparedness over the short and long terms, members of these career fields will require continuous (if only periodic) refresher training and evaluation in combat tasks. If the combat skills learned in CBAT are to remain relevant to the readiness of individuals and units, the amount and frequency of training required to maintain established proficiency levels must be developed. This might be accomplished by employing the refresher training timetables the SF, CCT, PJ, and TACP specialties currently employ.

**Table S.1**  
**General CBAT Course Enhancements and Deferrals**

| Training Area               | CBAT-Provided Training Enhancements | CBAT Does Not Change | Full Proficiency Deferred to IST |
|-----------------------------|-------------------------------------|----------------------|----------------------------------|
| Weapon proficiency          | Weather, EOD, SERE, SF              | TACP                 | PJ, CCT <sup>a</sup>             |
| Field training              | Weather, EOD, SERE                  | SF, TACP             | PJ, CCT                          |
| Navigation                  | Weather, EOD, SERE, SF              |                      | PJ, CCT                          |
| Self-defense                | Weather, EOD, SERE, PJ, CCT, TACP   | SF                   |                                  |
| Physical training           | Weather, EOD, SERE, SF, TACP        |                      | PJ, CCT                          |
| Medical                     | Weather, EOD, SERE, TACP            | SF, CCT              | PJ                               |
| Communications <sup>b</sup> |                                     | EOD, SF, PJ, SERE    | CCT, TACP, weather               |

<sup>a</sup> SF defers weapon safety.

<sup>b</sup> Potential for radio cross-training.

<sup>6</sup> RAND provided the Air Staff a limited-distribution document containing an analysis of CBAT without the 25-day limitation. Appendix B summarizes that analysis. If a CCT standard is used, 38 eight-hour days are required; with a PJ standard, 37 eight-hour days are required. The 25-day limitation was specified by senior leadership.

## CBAT Resource Estimate Analysis

Using the minimum-duration model discussed above, we developed a strawman POI, which we then entered into the RAND Schoolhouse Model to compute the resources required to run a CBAT course. We ran the model at tier-1–only input levels of 1,200 and 6,600 graduates per year and at a tier-2 input level of 6,600 graduates per year.<sup>7</sup> Table S.2 shows the results. We could not estimate requirements for the CBAT companion course because no course outline or training standard existed at the time.

## CBAT Companion Training Survey Analysis

We surveyed 108 previously deployed tier-3 personnel about their deployment experiences.<sup>8</sup> From these data, we compiled a list of 400-plus threatening and potentially threatening

**Table S.2**  
**Comparison of CBAT Requirements for the Two Cases**

|  | Graduates per Year                                |   |
|--|---|---|
|  | 1,200   | 6,600   |

| Road systems (no.) <sup>b</sup>            | 1   | 3   |
| Administration                             | Building<br>Vehicle parking<br>Ammunition storage | Building<br>Vehicle parking<br>Ammunition storage |
| Kit storage (no. of kits)                  | 1,700   | 4,000   |

<sup>a</sup> Each with 15 firing points.

<sup>b</sup> For mounted movement.

<sup>7</sup> Tier-1 specialties are the original enlisted CBAT specialties: PJ, CCT, TACP, and BWT. Tier-2 specialties add SF, EOD, and SERE.

<sup>8</sup> Tier-3 specialties are all other specialties not referenced in tiers 1 and 2. Tier-3 specialties are also referred to as the *non-ground combat* or *inside the fence* specialties.

incidents. With the help of AETC subject-matter experts, we grouped these incidents into training categories to produce a justifiable requirement for CBAT companion training.

Table S.3 shows the proportion of “inside the fence” personnel who went OTW while deployed to Iraq, Afghanistan, Kuwait, or other locations. The survey showed that 60 percent of deployed tier-3 personnel went OTW at one time or another.

Given the results of the survey, RAND recommends that training provided in a CBAT companion course for tier-3 personnel

- be provided to all tier-3 personnel deploying to combat locations or to other locations where they may receive orders to deploy to a combat location (e.g., personnel deploying to Germany who may be called on to travel to Iraq)
- include a minimum of ten days of training time
- cover all categories individual subject-matter experts identified in their sorting or that the material from the Lessons Learned Database suggested<sup>9</sup>
- refer to and apply the examples and incidents collected in this study
- involve realistic field simulations or other creative training solutions
- apply integrated rather than sequential training of several categories
- be updated regularly using short, open-ended response surveys of all personnel returning from deployments.

**Table S.3**  
**Personnel Going OTW, by Deployment Location**

| Deployed Location | Sample Size<br>(no.) | Going OTW |         |
|-------------------|----------------------|-----------|---------|
|                   |                      | Number    | Percent |
| Iraq              | 64                   | 31        | 48      |
| Afghanistan       | 12                   | 8         | 67      |
| Kuwait            | 36                   | 32        | 89      |
| All locations     | 108                  | 65        | 60      |

NOTE: Some individuals in the sample had been deployed to more than one location and are thus represented in more than one place. “All locations” includes deployments to Iraq, Afghanistan, Kuwait, or any other location (e.g., Southwest Asia, Qatar, no location reported).

<sup>9</sup> Headquarters Air Force, Lessons Learned Division (AF/A9L), maintains the Air Force Lessons Learned Database, which is intended to exploit Web-based technologies to improve the after-action reporting process and its use by Expeditionary Air Forces.

## Future Work

The next step in CBAT implementation is to develop a CBAT companion course training standard and a strawman POI. We could then use the RAND Schoolhouse Model to estimate training resource requirements for both the CBAT and CBAT companion courses. At that point, we would have a better estimate of the full land area and facilities required—a prerequisite for selecting a location for training.

Additionally, while this monograph was being prepared, the Air Force began work to increase basic military training by ten days. Most of the increase is for foundational training in combat-related items. This increase in basic military training will therefore likely reduce the training CBAT and the CBAT companion course must provide. In turn, this will affect the total resources required for a CBAT campus, or campuses, depending on the training approach taken. The effects of these curriculum changes warrant further analysis.

## Acknowledgments

---

There are a number of people to thank without whom there would be no study or results. Our biggest thanks go to Brig Gen Robert H. Holmes (AF/A7S), who had the vision to propose changing what and how the United States trains its airmen.

We also wish to thank our Air Staff sponsors, Brig Gen William L. Holland, Brig Gen Robert Kane, Brig Gen Mary Kay Hertog, Col Gail Keefe, and Col Dennis Jones, who opened doors to get the data needed to do this study and provided study direction. The Security Forces Center provided a valuable critique of the draft document.

We are grateful to Brig Gen Richard Perraut (AETC/A5/8) and Michael Snedeker (AETC/A5/8A) for providing database access and computer support that was invaluable in the research process.

Jody Jacobs (RAND) provided timely advice and counsel as we worked through the study process.

Maj John McElroy (AETC) was involved in every aspect of the analysis, getting data, organizing subject-matter experts, planning field trips, and offering expert advice.

We also thank Col Rich Naylor (AETC/A3T) and his staff for their support. His replacement, Col Jim Hollingsworth, continued the same level of support and also helped during his previous job in AF/A1.

Air Staff experts Lt Col Jeffrey Staha and CMSgt Ryan Beckmann provided great information and continuity during the whole process.

Other Air Staff personnel, Lt Col Brian Yoo, Col Dawn Hodge, and Susan Giedt, helped to set up the survey. Lou Datko (AFMA) fielded the RAND-developed survey. He also sent out the follow-up emails to the sampled personnel.

We also want to thank AETC experts Lt Col Dave Marttala, Maj John Fitzhugh, CMSgt David Dick, SMSgt Kenneth Phillips, Thomas Cacy, Teddy Woodland, Capt James Masoner, MSgt Amy Johnson, SMSgt Caleb Washington, Donald Selman, and Edward B. Lundberg for their assistance as training experts.

Capt Chris Callis (AF/A9L) and CMSgt Richard Gornal (AF/A3) were very helpful opening doors to the Air Force Lessons Learned Database.

We want to thank Squadron Leader Robert McLucas (Royal Air Force) and his colleague, Captain Shaw, for the excellent briefing and tour of the Basic Combat Convoy Course facilities.

Last, we wish to thank Pat Bowden and David Oaks, who reviewed the document and offered many useful comments.

## Introduction

---

Air Force senior leadership has recognized the need for all airmen to possess the skills that will enable them to survive and operate in an expeditionary environment. Increasingly, deployed airmen find themselves stationed at bases with active insurgencies operating in the area.

In February 2004, the Secretary of the Air Force designated officers and airmen serving in seven specialties as *battlefield airmen*. Also, the Chief of Staff of the Air Force has indicated that all airmen should regard themselves as *expeditionary airmen*. Experience in recent conflicts has led to recognition that airmen require improved expeditionary combat skills. The Air Force established the Expeditionary Airmen (EA) Integrated Product Team (IPT), co-led by the Air Force Directorate of Operations (AF/A3O) and the Air Force Directorate of Security Forces (AF/A7S) and drawn from staffs across the Air Force, to address the issue of combat skills in expeditionary environments.

One of the EA IPT initiatives was to develop common battlefield airman training (CBAT) to save costs and to develop a common culture among the battlefield airman specialties. Later, the IPT expanded CBAT to include additional specialties with high probabilities of “outside the fence” operations.<sup>1</sup> Additionally, the IPT recognized that all expeditionary airmen require some level of CBAT-like training prior to deployment to high-threat areas. The IPT initiated the idea of a “CBAT companion” course for all other specialties.<sup>2</sup>

In September 2005, the Air Force asked RAND Project AIR FORCE to help determine the resource requirements of CBAT. The service also asked RAND to assess the need for a CBAT companion course.

## Definitions

The Air Force has used a number of terms over the last year to differentiate the various regions of operations and the types of personnel who would most likely operate in these regions.

---

<sup>1</sup> Air Force personnel use the phrases *outside the fence* and *outside the wire* (OTW) interchangeably to indicate operations outside the defended perimeter of an Air Force installation. *Outside the fence* is more common at the Air Staff level. Focus group participants with deployment experience used *outside the wire*. Part of this difference may be due to the use of wire to demarcate the perimeter at deployed locations instead of the fences typical at an Air Force main operating base.

<sup>2</sup> *CBAT companion* training is intended as a just-in-time program for non-ground combat AFSCs about to be deployed. We discuss this in more detail beginning in Chapter Four.

For individuals who routinely operate outside the fence of an Air Force base, the Air Force has used the terms *battlefield airmen* and *tier-1 personnel*. These are individuals serving as para-rescue (PJ), combat controller (combat control team [CCT]), tactical air control (tactical air control party [TACP]), and battlefield weather (battlefield weather team [BWT]) personnel.

The Air Force has also used the terms *expeditionary combat airmen* and *tier-2 personnel* to describe those who operate both inside and outside the fence of an Air Force base. These specialties include security forces (SF); explosive ordnance disposal (EOD) personnel; and survival, evasion, resistance, and escape (SERE) personnel.

Finally, the Air Force has used the terms *expeditionary airmen* and *tier-3 personnel* to describe those who routinely work inside the fence of an Air Force base. This group includes all other specialties not mentioned in tiers 1 and 2. This set of specialties has been referred to as *non-ground combat specialties*.

## History

In October 2005, the Air Force developed a 25-day training outline for the CBAT course for tier-1 personnel. Later, the EA IPT expanded CBAT to include tier-2 personnel. CBAT would take place after basic military training (BMT) and before initial skills training (IST) (Figure 1.1).<sup>3</sup>

The Air Force recognized the need for CBAT-like training for tier-3 personnel but focused initially on tiers 1 and 2. In the meantime, the Air Force was directed to resource U.S. Central Command requirements in theater that had been previously met with Army personnel. Consequently, some tier-3 Air Force personnel (primarily transportation specialists) were required to go OTW routinely to support Army logistics operations. These requirements, also called *ILO taskings* (Air Force personnel assigned “in lieu of” Army personnel, since they are filling Army Title 10 support requirements<sup>4</sup>), forced the Air Force to develop battlefield training quickly for some tier-3 personnel. The Basic Combat Convoy Course (BC3) was developed in response to this ILO tasking.

Additionally, the Air Force was proposing a 19-hour unit-level predeployment course (training at the home base) for all personnel deploying overseas to a combat theater.<sup>5</sup> The Air Force also began the process of lengthening BMT by ten days to include more combat train-

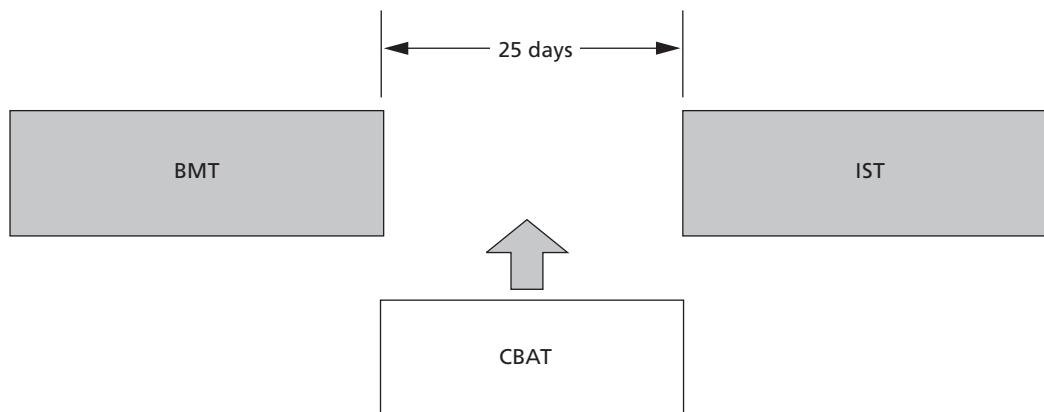

---

<sup>3</sup> IST, also called *technical training*, is specific functional or specialty training designed to prepare airmen to be mission-ready when they arrive at their unit of assignment. IST awards these individuals a skill level 3 in their Air Force specialties. Airmen are expected to continue progressing through on-the-job training and completing curriculum development courses to achieve level 5, or *craftsman*, designation.

<sup>4</sup> U.S. Army Training and Doctrine Command pamphlet 525-77 summarizes the responsibilities Title 10 of the U.S. Code assigns to the service. Among these, the Army must provide various types of support in a wartime theater, such as inland petroleum distribution, veterinary support, and enemy prisoner of war and detainee programs. The pamphlet also defines the Army’s role in fulfilling Wartime Executive Agency Requirements.

<sup>5</sup> The 19-hour course is not intended to replace CBAT companion training but rather gives members of deploying units an opportunity to receive deployment skills training collectively.

**Figure 1.1**  
**Sequence and Duration of Proposed CBAT Course**

RAND MG624-1.1

ing. Some training formerly devoted to developing discipline, such as folding clothes, has already been replaced with handling, disassembling, and cleaning weapons.

### Limitations of This Study

Because of the urgency, at the time of the study, of fielding a combat training program, RAND was asked to help size the resource requirements for the proposed course training standard. We did not look at the larger questions of whether a CBAT course was needed (it was assumed), whether the training needed to be common, or where the training might take place.

None of the information gathered since then or the direction changes of the Air Force has indicated any question regarding the need for CBAT.

There have, however, been questions concerning the need for “common” combat training. It is not clear that a common course for the ground-combat Air Force Specialty Codes (AFSCs) is actually cheaper. There are certainly positives in the level of standardization of a common course and the efficiencies of shared use of unique facilities. However, most ground-combat specialties operate independently of the others and do not benefit from a shared experience that might or might not materialize in future operations.

Finally, there have been questions regarding the best location for CBAT or even if one location is the best answer. SF represents the bulk of any future combat training (75 percent) and already have extensive facilities to train its personnel. We did not evaluate these facilities to see whether they could absorb some of the other, smaller AFSCs.

## Organization of This Monograph

Chapter Two is an independent content evaluation of CBAT. The independent review of CBAT did not offer any new insights to the Air Force. But, since no plan of instruction (POI) existed for CBAT at the time, the independent review became the basis for a strawman POI for CBAT. We then used the strawman POI in RAND's Schoolhouse Model to estimate the resource requirements for CBAT. Chapter Three is the result of that analysis, defining the required resources for CBAT at various throughput levels (tier 1, tier 2, and tier 3). Chapter Four surveys tier-3 (non-ground combat) personnel who had recently been deployed to Iraq, Afghanistan, or Kuwait.<sup>6</sup> The survey developed a list of incidents tier-3 personnel faced in high-threat areas. Chapter Four also discusses the development of the survey and its results and includes recommendations for a CBAT companion course as a result of the training need analysis. Chapter Five contains recommendations for further work.

We also include six appendixes. Appendix A describes the CBAT course as it was planned in late 2005. Appendix B describes the course models we developed. Appendix C presents the inputs and outputs for our schoolhouse model. Appendix D lists the information we gleaned from the Air Force Lessons Learned Database. Appendix E tallies the our survey results. Finally, Appendix F presents the results of the subject-matter experts' sorting of the experiences described during the interview phase of our research.

---

<sup>6</sup> The survey focused on the current area of operations. While the next conflict may not include insurgency warfare with religious fundamentalists, the deficiencies noted need to be addressed regardless of the area of operations or type of conflict.

## Evaluation of Common Battlefield Airman Training

---

### CBAT Evaluation Process

The CBAT course outline of October 20, 2005, specifies 39 specific combat tasks in the following seven core combat skill training areas:

1. weapon training
2. tactical field operations
3. land-navigation field events
4. self-defense techniques and individual combat skills
5. physical fitness training
6. medical
7. communications.

The outline sets out the proficiency standards to which these tasks will be taught. The course outline also specifies standards for three physical training (PT) events: running, swimming, and calisthenics. Finally, the CBAT plan specifies a maximum course length of 25 days.<sup>1</sup>

Currently, only four of the CBAT specialties receive any substantial training in combat skills as a condition for attaining skill level 3: SF, CCT, PJ, and TACP.<sup>2</sup> For the most part, the training guidelines for these specialties—as indicated by their respective career field education and training plans (CFETPs) and POIs—provide classroom and/or hands-on instruction in most of the areas included in the CBAT course. However, the specific course content, training conditions, duration of instruction, and performance standards vary across these specialties.

We developed three model courses that satisfied CBAT's requirements, basing these courses primarily on training materials from the SF, CCT, or PJ curriculum.<sup>3</sup> The estimated duration of each course exceeded the specified 25-day maximum. We therefore developed a fourth,

---

<sup>1</sup> Appendix A provides the outline, with the training tasks and proficiency standards.

<sup>2</sup> Skill level 5 weather personnel who are assigned to combat weather teams develop proficiency in basic combat field skills by attending the Combat Weather Team Operations Course and receiving mission-specific training on assignment to airborne and special operations units.

<sup>3</sup> No full definition of combat skills training was available within the TACP CFETP and POI. This evaluation therefore does not include a TACP model. Particularly problematic is that the hours of training provided for some material listed in the CFETP (e.g., weapons and field tactics) were not determinable from the POI.

minimum-duration course that satisfied the CBAT proficiency requirements for each task by using the standard of the specialty that demanded the fewest training hours. For the most part, the standards of the SF training curriculum met these requirements. Appendix B discusses each model in detail.

## Assessment Goals

Developing these four models allowed us to accomplish two related goals. First, we determined the feasibility of providing the specified CBAT elements within the given 25-day time frame. We found that only a course based primarily on the SF training curriculum will satisfy the specified 25-day duration.

Second, for each AFSC, we identified the tasks and skill areas for which CBAT will provide training enhancements (i.e., where it will provide training of longer duration or to a higher standard than what each AFSC currently provides) and those for which CBAT specifies less training than would ordinarily be provided in IST and for which further training in IST will be required to reach the proficiency to attain skill level 3. Generally, these proficiency deferrals are concentrated within the PJ and CCT specialties.

In addition to these immediate goals, the evaluation strategy provides an opportunity to briefly address additional considerations related to the execution of the CBAT course itself and the career development requirements of the specific specialties involved.

## Caveats

In developing our models, we found it necessary to make a number of assumptions about the duration of training and the training intent of the specified CBAT proficiency levels. The appropriateness of these assumptions may affect the length of the final CBAT course and perhaps the specified attainment levels for some tasks.

## Field Training and Administrative Activities

CBAT specifies that training will culminate in an 18- to 24-hour field training exercise (FTX) that integrates a practical application of learned tasks. Because some training tasks may be particularly suitable for instruction under field conditions—such as bivouac events (personal hygiene and field sanitation) and construction and camouflage of hasty field fortifications—we did not include this time in the models. The final CBAT course may therefore be as much as one day longer than we estimate here. Similarly, we do not estimate the time required for such activities as class graduation and the issuing and return of equipment.<sup>4</sup>

---

<sup>4</sup> In most Air Education and Training Command (AETC) technical training courses, a half-day is provided in the course chart for these activities.

### Physical Training

The expressed intent of the PT regimen is not only to develop the physical strength and stamina required for the successful completion of CBAT, but also to prepare students bound for PJ and CCT training for the more demanding physical requirements they will encounter in these IST courses. Therefore, all our models assume the CCT standard of two hours of PT per eight-hour instructional day (that is, two hours of PT in addition to all other training provided on a given day).<sup>5</sup> We also treat the training time allotted to swimming and combat water survival as PT. To the extent that training is conducted in range or bivouac environments (where PT is generally not conducted), we have most likely overestimated the total amount of PT instruction the course will provide.

### Deferred Proficiency

Finally, for specialties with higher task-proficiency standards and more-intensive training than CBAT will provide (because CBAT requires fewer hours or has lower standards), we assumed that training to meet the final AFSC proficiency would be provided in IST (i.e., we did not expect specialties to replace their own current standards with lower CBAT) and that the implementation of CBAT would coincide with a reduction in current IST lengths. Although requirements beyond CBAT's are not directly germane to the development of the final CBAT course curriculum, we believe that specialties with training hours or proficiency requirements that exceed those of CBAT cannot reduce the length of their IST courses by the same number of training hours provided in CBAT.<sup>6</sup> Some refresher training will be required during IST to bring students up to a level at which work toward achieving advanced proficiency can begin.<sup>7</sup>

### CBAT Requirements

This section describes the training requirements of the CBAT minimum-duration model. To estimate the course requirements, we began by determining which of the SF, CCT, and PJ specialties currently required the fewest per-task instructional hours. For 19 out of 36 specific CBAT skills (excluding PT and swimming events and three tasks for which standards could not be verified), the SF guidelines met this standard. The CCT curriculum provides standards and hours for another ten tasks—including rifle and pistol qualification—while the remaining seven tasks come from the PJ curriculum (see Appendix B). The estimated course length is

---

<sup>5</sup> The two-hour PT requirement is a significant increase over current PT training. One of the implicit goals of the “common” course was to develop a common culture and mentality. Since the PJ and CCT students require the PT, we included it for all the students. If the additional PT causes significant injuries, this could be an argument against common training.

<sup>6</sup> The full cost of CBAT will not be known until the required course resource estimate is accomplished for each of the affected tier-1 and tier-2 courses.

<sup>7</sup> For example, a CBAT course based on the minimum-duration model would provide all students approximately 55 hours of navigation training. However, CCT training specifies 122 hours of navigation. CCT students must make up the balance of this training in IST, but they will also require additional training time to refresh basic skills learned during CBAT (such as orienteering or map-reading methods).

just under 25 eight-hour instructional days, excluding additional time for an FTX, graduation ceremonies, and processing students in and out. Under current Air Force career field training guidelines, this was the only model estimated that both satisfied the current 25-day CBAT course length requirement and provided training at the specified proficiency levels.

However, to incorporate FTX and administrative events, such as graduation and student processing, within the 25-day time frame, some minor revisions of the tasks and/or proficiency standards will be necessary—or the training day will need to be extended beyond eight hours. We feel that recovering the time necessary for FTX and administrative activities should not require altering the course greatly. For example, spreading the six hours of hand-to-hand combat training over three PT periods could shorten the course by almost one day without eliminating any instruction time. Instruction in bivouac and other field events (such as camouflage) may be incorporated into the FTX or delivered when students stay overnight at training ranges. Because the CBAT outline calls for conducting the practical application of mounted movement techniques during regular transit to and from training sites, the 30 hours currently dedicated to this task can probably be reduced substantially to no more than a single day of classroom and hands-on training—thus freeing almost two days of training time for other tasks. Additionally, because the PJ and CCT curricula require a 3c proficiency standard for all tasks, the estimated training hours for some tasks may be more than necessary to bring all CBAT students to the 2b or B level. Further reductions or reallocations of training hours may therefore be feasible.<sup>8</sup>

It should be reiterated that, relative to other possible courses (such as those based on PJ or CCT training requirements), a large portion of the time savings under the minimum-duration model comes from reductions in total hands-on weapon training (i.e., marksmanship and weapon qualification are allotted only 33.25 hours, compared to about 70 hours in the SF and PJ models). Without expanding the amount of weapon-handling hours (at the expense of some other skill area or by extending the course length), reaching the 3c weapon proficiency requirement may pose some organizational and pedagogical challenges. The 32-hour CCT weapon qualification regimen was developed for members of a highly selective AFSC. It is not known how quickly members of other AFSCs will be able to attain the proficiency level currently expected of CCT candidates. That there are differences in existing training standards across AFSCs seems to assume that there are some differences in either the candidates' abilities or the effectiveness of the various training regimens. For example, compared to CCT, SF weapon qualification training is designed to produce a lower proficiency level (2b) under a smaller set of conditions in roughly the same amount of time (31.25 hours, excluding weapon safety training). On the other hand, PJ trainees are given more than twice as much time as CCT trainees to reach the same 3c level of proficiency. While the relative abilities of AFSC candidates to achieve the specified weapon proficiency levels is of great importance, it should in fact be a concern for all tasks when the CCT or PJ training standard is adopted.

---

<sup>8</sup> Appendix A defines “3c” and the other training proficiency codes. The CBAT course lacks instruction on the M-203 grenade launcher or crew-served weapons, such as the M-249 squad automatic weapon. Because these weapons are fundamental to squad-level tactics, consideration might also be given to reallocating some recovered training hours to a block of instruction that familiarizes students with their use. For example, excluding range qualification and operator maintenance, the SF course currently provides 5.5 training hours in these weapon systems.

## CBAT Course Enhancements and Proficiency Deferrals

This section provides an overview of the training enhancements and proficiency deferrals for each specialty whose students attend CBAT. Because the CBAT course description specifies some tasks that the SF, CCT, and PJ ISTs do not currently provide, all AFSCs that participate will receive some training enhancements. However, the weather, EOD, and SERE specialties that currently receive no combat training will receive the majority of enhancements from CBAT. Table 2.1 summarizes the AFSC-specific enhancements in the seven core combat skill training categories (first column) identified in the proposed CBAT course outline (Appendix A).

### Training Enhancements

Since EOD, SERE, and weather trainees currently receive little or no training in combat skills, implementation of CBAT will enhance the training for these specialties in all skill areas. One possible exception is in the area of radio communications, in which these AFSCs currently provide training. However, all specialties, even those, such as weather and CCT, for which radio communications are a core competency, may receive enhancements from CBAT to the extent that training increases students' exposure to different radio systems.

Although SF trainees currently receive extensive instruction in weaponry, the CBAT marksmanship training standards (3c) are higher than those currently specified for SF training (2b). SF trainees will therefore receive enhanced training in weaponry. CBAT will also provide SF trainees with additional navigation training, in particular by adding training under nighttime conditions. Swimming and combat water survival skills training would also become available to SF trainees. PJ and CCT trainees are currently not provided hand-to-hand combat training. SF hand-to-hand training is geared toward defensive measures (physical apprehen-

**Table 2.1**  
**General CBAT Course Enhancements and Deferrals**

| Training Area               | CBAT-Provided Training Enhancements | CBAT Does Not Change | Full Proficiency Deferred to IST |
|-----------------------------|-------------------------------------|----------------------|----------------------------------|
| Weapon proficiency          | Weather, EOD, SERE, SF              | TACP                 | PJ, CCT <sup>a</sup>             |
| Field training              | Weather, EOD, SERE                  | SF, TACP             | PJ, CCT                          |
| Navigation                  | Weather, EOD, SERE, SF              |                      | PJ, CCT                          |
| Self-defense                | Weather, EOD, SERE, PJ, CCT, TACP   | SF                   |                                  |
| Physical training           | Weather, EOD, SERE, SF, TACP        |                      | PJ, CCT                          |
| Medical                     | Weather, EOD, SERE, TACP            | SF, CCT              | PJ                               |
| Communications <sup>b</sup> |                                     | EOD, SF, PJ, SERE    | CCT, TACP, weather               |

<sup>a</sup> SF defers weapon safety.

<sup>b</sup> Potential for radio cross-training.

sion and restraint techniques [PART]). Since the course training standard defined the use of the Marine Corps model, this represents an enhancement for these AFSCs.

### Proficiency Deferrals

The term *proficiency deferrals* refers to cases in which the current training standard for a specialty exceeds the CBAT standard. In these cases, the additional required training would be taught in the specialty's awarding course. For the most part, the deferral of full development to specified proficiency levels is limited to the PJ and CCT specialties (although the areas in which deferrals may occur are not identical).<sup>9</sup> These AFSCs would experience proficiency deferrals even if the CCT or PJ training guidelines (or some combination of the two) were used as the primary basis for CBAT courses; for all practical matters, the 25-day course length and the anticipated class sizes would necessarily limit the variety of conditions under which certain types of training could be provided (for instance, weapon qualification under nuclear, biological, and chemical and nighttime conditions accounts for many of the CCT weapon training hours). Likewise, practicality limits the amount of CBAT medical training relative to that of the PJ specialty.

Navigation is another area in which training deferrals may be substantial for tier-1 trainees. Navigation training hours will be 48 percent lower for PJ candidates (who normally receive 105 hours of training but will now receive 55 hours) and 55 percent lower for CCT candidates (who normally receive 123 hours). Additionally, hands-on weapon time will be cut in half for PJ and SF trainees. It should be noted, however, that the decrease in SF trainees' hands-on weapon experience comes largely from decreasing weapon safety hours from 37 to 2. The comparatively large number of safety hours for SF personnel reflects the circumstances of their police duties, which require frequent handling of weapons and live ammunition outside field and range environments. While eliminating these hours may help SF trainees achieve the advanced CBAT weapon proficiency standard in the allotted time, safety nonetheless represents an area of proficiency deferral. Given the selectivity of the PJ and CCT specialties, concerns for attrition and washback also argue for deferring proficiency in some other areas (not the least of which may be PT).<sup>10</sup> In light of these deferrals, IST courses for the PJ and CCT specialties may require some revision to accommodate refresher training that builds on the core skills learned in CBAT.

### Additional Considerations

The implementation of CBAT will raise other issues that are not immediately apparent from a review of its training length and proficiency requirements. These relate to (1) the effects of extended training pipelines on manpower requirements, (2) the maintenance and recertification of skills acquired in CBAT, and (3) aligning the physical and psychological demands of

---

<sup>9</sup> One exception is that TACP and weather specialists may have to defer some proficiency in communications training (which is currently a core competency for each specialty).

<sup>10</sup> It is also possible to use CBAT as a screening mechanism for some of the more-difficult follow-on specialties.

the CBAT curriculum with the characteristics of the trainees and career professionals in the participating specialties.

### **Effects of Extended Training Pipelines**

For EOD, SERE, and weather specialties, the training pipeline will be lengthened by the duration of the CBAT course, plus any additional transit time involved in moving from CBAT to IST. CBAT extends the training pipeline for a new recruit in one of these specialties by 25 training days beyond that of the minimum-duration course. Because CBAT proficiency standards generally meet or exceed those of the SF training curriculum, substantial reductions in the length of SF IST may be feasible. CBAT may therefore extend the SF pipeline by only the amount of time devoted to tasks in which members currently receive no training, about 6.6 days (plus any additional transit time). Understanding pipeline productivity losses for CCT and PJ recruits will require a better understanding of how much refresher training is required for the specific tasks for which the training provided is below the 3c standard, in addition to the 2.25 days of additional time devoted to military operations on urban terrain (MOUT) and hand-to-hand combat training. Career field managers should expect some increases in their pipelines but not of the same magnitude as for the EOD, SERE, and weather specialties.

### **Refresher Training**

A related concern is the integration of CBAT combat tasks into the continuous career development of SERE, EOD, and weather specialists and the cost of such refresher training. For CBAT to achieve the goal of improving combat preparedness over the short and long terms, members of these career fields will require continuous (if only periodic) refresher training and evaluation in combat tasks. If the combat skills learned in CBAT are to remain relevant to the readiness of individuals and units, the amount and frequency of training required to maintain established proficiency levels must be determined. This might be accomplished using current SF, CCT, PJ, and TACP specialty refresher training timetables.

Additionally, supervisors must not only be capable of performing combat tasks to the CBAT standards but also be capable of training subordinates in these tasks and evaluating their performance. Career field managers must therefore be prepared to develop skill-level requirements for CBAT tasks and incorporate these into the process of evaluating individuals for promotion to higher grades and movement into supervisory positions.<sup>11</sup> More immediately, a time line for providing CBAT to all current members of these specialties, at all skill levels, must be developed.

Since SERE, EOD, and weather specialties do not currently undergo formal combat training (with the exception of members of combat weather teams), some of the time currently allotted for training and for noncritical duties must be reallocated.<sup>12</sup> This reallocation can occur through some combination of techniques. First, any current proficiency standards

---

<sup>11</sup> These concerns are not unique to the CBAT course. Similar concerns also arise regarding the content of new curricula and training courses, such as BC3 and the CBAT companion course, for personnel under deployment orders.

<sup>12</sup> Existing funding and infrastructure (e.g., training facilities and equipment) must also be reallocated to accommodate new tasks, or new resources must be acquired.

that exceed the knowledge, skills, and ability required to perform a particular task at a particular skill level could be decreased. Second, the target time for individuals to achieve currently required proficiency levels might be increased. Third, a review of existing tasks could be conducted to identify training items that can be eliminated (for example, if a system or piece of equipment is phasing out of the current inventory).<sup>13</sup> Fourth, a similar review could be conducted to identify the minimal number of training events and instructional hours required within a specified period to attain current proficiency levels. This would entail measuring how many members fall below the specified proficiency level by specific times following a training event to develop a timetable for refresher training. Across units, the average point at which an unacceptable number become unable to meet the proficiency level would set the guidelines for the time between training events.<sup>14</sup>

In all these instances, time that is currently used to achieve and maintain current proficiency levels would become available for combat skills training. At this point, however, it is not clear how much proficiency levels could be lowered for any given task or how much excess training and performance time could be recovered by deferring or lowering proficiency. Understanding this would require a thorough review of all critical skills and tasks for each affected AFSC. What is clear, however, is that lower task proficiency would reduce productivity. Preserving the aggregate productivity levels deemed appropriate for the Air Force's overall readiness might require increasing the personnel strengths of these career fields.

### **Physical and Psychological Demands**

A third set of concerns relates to the physical and psychological demands of the CBAT course itself. The course outlines PT guidance that "PJ/CCT must meet career field exit standards" implies that the CBAT PT standards will be adjusted upward from what those who are not special operations forces (SOF) trainees receive. While motivating trainees to achieve higher levels of physical fitness is commendable, it must be acknowledged that, for many military personnel, high PT standards pose a barrier to many special operations training programs. Even among highly selected SOF candidates, the physical demands of training—and the swimming requirements in particular (see Harrell et al., 1999)—contribute to comparatively high levels of attrition. Highly intense CBAT fitness training standards (even if fitness testing scores remain at current levels) may therefore increase the rates of attrition or washback among non-SOF trainees. Existing standards of PT and physically demanding training for members of non-SOF specialties should therefore be reviewed, and the CBAT standards should be adjusted to reflect these realistic physical requirements.

---

<sup>13</sup> The utilization and training workshops currently review all items in the training curriculum. Obsolescent training rarely provides any hours for reuse.

<sup>14</sup> In practice, not all units and members would require training at the same interval. Levels of experience gained through relevant job performance and supervisors' training experience are potentially mitigating factors. Following the Ready Aircrew Program methodology, dynamic guidelines might be developed for different types of units based on unit personnel characteristics (e.g., the number of man-years of training in the previous year, turnover rates, leadership experience). This method of evaluating current training might therefore have the advantage of rationalizing training to produce the most efficient outcomes but does not by itself guarantee that units can reduce their training time so that they can focus on a broader array of tasks.

Considering that women do not currently undergo training of the physical intensity SOF specialties demand, it is not yet known how the majority of female trainees will perform in CBAT events that are designed to be physically challenging for *deep battlespace* trainees (such as long-distance dismounted movements under heavy equipment loads). We are not predisposed to believe that female trainees are less capable of performing combat tasks than males or that they will systematically perform poorly at higher levels of intensity. Women receive combat training not only in the SF specialty and in preparation for assignment to combat weather teams (although they are not eligible for assignment to special operations units) but also in other military environments, such as the service academies. Women are also active members of combat specialties in the armed forces of some foreign nations (e.g., women serve in the Canadian infantry). Nonetheless, the exposure of women to the types and amounts of combat training considered appropriate for developing elite ground combat personnel is unprecedented in the United States and perhaps elsewhere as well. The possibility that even incremental quantitative changes in standards may require qualitatively different approaches to training and evaluating trainees of different genders should be considered.

The general concerns about the appropriate physical demands of CBAT can also be raised about the amounts of psychological stress deliberately induced during CBAT. Stress is an integral component of CCT, PJ, and SERE training (and is common to combat training in other services). Moreover, the axiom “train as you fight” stipulates that members of any specialty with some likelihood of experiencing combat conditions become accustomed to operating under extremely stressful, chaotic, and unforgiving conditions. Combat personnel operating on the ground must also be encouraged to develop the aggressiveness and self-discipline necessary for inflicting violence reflexively, decisively, and ruthlessly when immediate contingencies call for it. High-stress conditions may be useful in this regard. Nonetheless, approaches to inducing and maintaining stress among trainees vary across services and even across specialties within the Air Force. Thus, one challenge to the implementation of CBAT will be in establishing a tone for the course—e.g., the instructors’ mannerisms and outward attitudes toward trainees, the level of the regimentation of trainees’ nontraining hours, the amounts of sleep and calories the trainees get, and the imposition of informal discipline (peer pressure, job selection, privileges)—that usefully employs stress without incurring unnecessarily high levels of attrition.

## Resource Requirements for the CBAT Course

---

### Building a CBAT Model

Using the results from Chapter Two and the specific course content from each combat AFSC POI, we developed a strawman CBAT POI that meets the requirements of the course training standard. We used portions of each course resource estimate to identify the types of resources needed for a CBAT course.<sup>1</sup> To simplify the computation of requirements for training devices, we grouped training devices into kits. Table 3.1 is an example of two such kits. We created 34 kits, 30 of which are reusable training devices, and four are consumable.<sup>2</sup>

We then used the RAND Schoolhouse Model to simulate a CBAT course at annual production levels of 1,200 (an estimate of tier-1 AFSC requirements) and 6,600 (an estimate of tier-1 and -2 requirements).<sup>3</sup> Figure 3.1 illustrates the simulation process. Students graduating from BMT are organized into classes (also referred to as *flights*) and execute the POI in sequence. The POI defines the requirements for each unit of course content: the number and types of facilities, training devices, instructors, and the time the unit of instruction should take. After

**Table 3.1**  
**Example Training Device Kits**

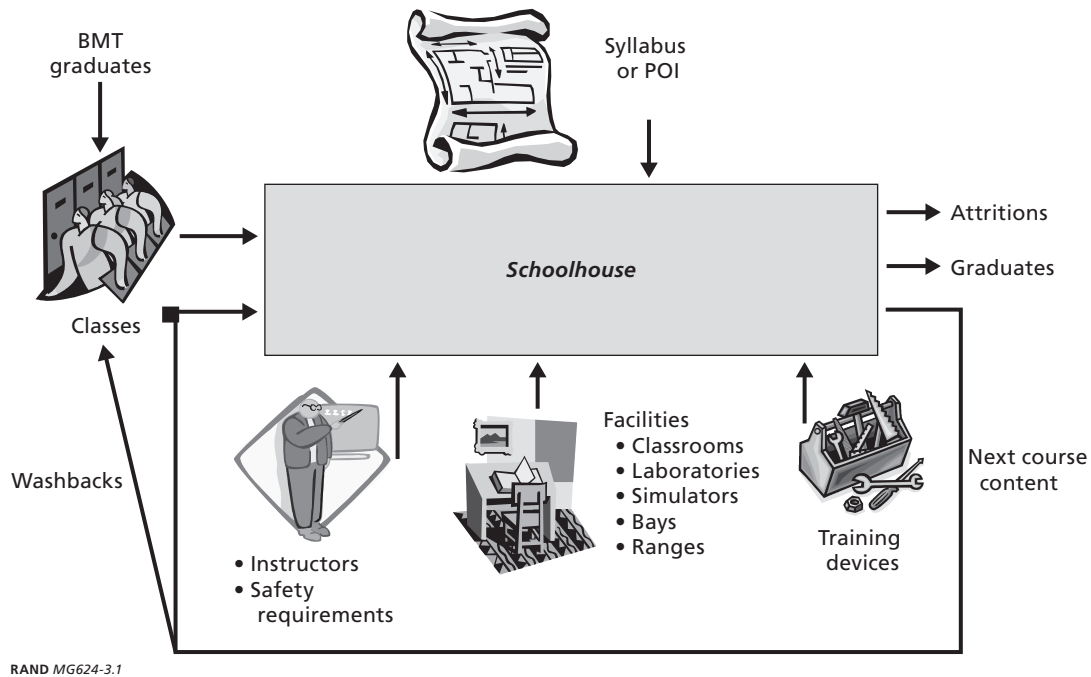

| Kit        | Contents                                      | Quantity |
|------------|---|----------|
| M-9 pistol | PISTOL_9MM_1005011182640                      | 1        |
|            | MAGAZINE_PISTOL_9MM_15 ROUND_M9_1005012044376 | 1        |
|            | ASSY_HOLSTER_9MM_1095011943343                | 1        |
| Tent       | STAKE_TENT_WD_ONE NOTCH_16IN_8340002619750    | 8        |
|            | SYS_SPT_CAMO WDLND_1080001081173              | 1        |

<sup>1</sup> The POI and resource estimate can be found in Appendix C.

<sup>2</sup> The kits are intended to give only a general estimate of resources. In fact, the reusable training device kits include some consumables (e.g., tape, batteries). The items needed for replacing these will require subsequent recalculation based on their consumption rates. Appendix C includes a complete list of these kits.

<sup>3</sup> Production levels represent the number of course graduates.

**Figure 3.1**  
**RAND Schoolhouse Model**

finishing each unit in the POI, the class goes on to the next until the POI has been completed. During each unit of instruction, depending on user input, individuals can wash out of the program or wash back to another class.<sup>4</sup> On completing the POI, students graduate.

## Assumptions

We used the original definition for CBAT and CBAT companion courses developed in early fiscal year (FY) 2006. Figure 3.2 illustrates our understanding of the process. CBAT is intended as common training for seven enlisted AFSCs.<sup>5</sup> It occurs directly following BMT and prior to specific IST, with the understanding that CBAT replaces some common aspects of IST.

After CBAT, the graduates would continue on in their specific pipelines and receive AFSC-specific instruction. Some of the CBAT instruction would now be redundant with the current IST, but since it was not taught to the level of detail the specialty required (deferred), time would still be required to finish the training and offer some review before continuing. Still, even in such cases, some reduction in IST would be possible.

<sup>4</sup> For a more detailed explanation of the RAND Schoolhouse Model, see Manacapilli and Bennett, 2006.

<sup>5</sup> CBAT was originally intended for seven AFSCs: enlisted PJ, TACP, CCT, and BWT; and officer combat rescue, special tactics, and BWT. Later, three enlisted AFSCs were added: SF, SERE, and EOD. It became common to refer to the seven enlisted AFSCs as the main requirement for CBAT.

**Figure 3.2**  
**CBAT Course Pipeline**

The “inside the fence” AFSCs would continue as they do today and would not receive training until needed for deployment. *CBAT companion* is intended as a just-in-time training program for the non-ground combat AFSCs. It would not replace unit-level predeployment training but would augment it.

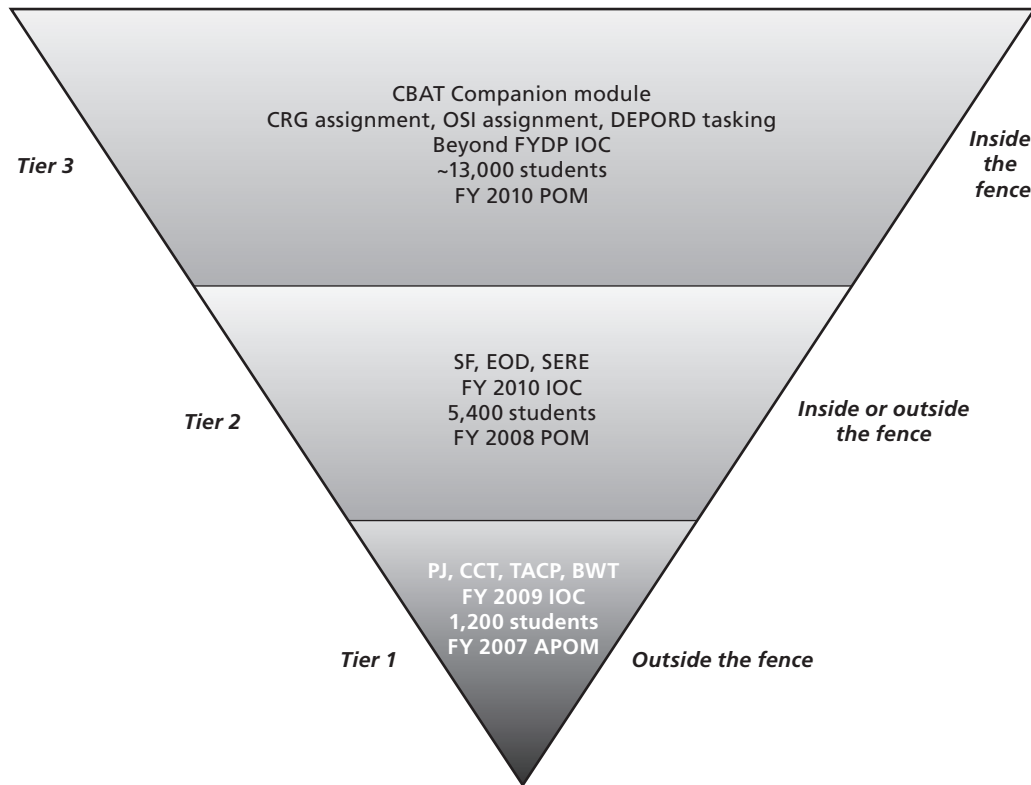

For our resource estimates, the EA IPT estimated two production levels for CBAT (Figure 3.3). The lowest region of the triangle represents the four enlisted AFSCs: PJ, CCT, TACP, and BWT (also called tier-1 AFSCs). The tier-1 AFSCs have a production requirement of 1,200. Moving up the triangle adds three more AFSCs: SF, EOD, and SERE (tier-2). The tier-2 AFSCs require an additional 5,400 graduates, for a total of 6,600.<sup>6</sup> The last part of the triangle is for the CBAT companion course. We did not estimate resource requirements for the CBAT companion course because it was still undefined.<sup>7</sup>

One last assumption concerns our attempt to define the land required for mounted movement. Rather than creating a huge land requirement for this purpose, the model assumed that mounted maneuver instruction would make use of perimeter roads (around the dismounted maneuver areas) and eight closed dismounted maneuver areas (520 acres). Furthermore, we assumed that mounted maneuver could encompass driving the personnel out to the dis-

<sup>6</sup> The majority of the increase in tier 2 is for SF personnel. Presently, the SF trains over 5,000 personnel in combat skills at Lackland Air Force Base (AFB) and Camp Bullis (both locations are within 45 minutes driving time of each other). These locations have fairly new facilities (constructed since 1996), including dormitories, a dining hall, new classrooms, simulators, ranges, an armory, equipment maintenance, weapon storage, and two MOUTs. Because of trained personnel requirement limitations, these facilities cannot accommodate all CBAT courses but could be part of a two-location system.

<sup>7</sup> Chapter Four will, however, define the CBAT companion course’s content requirements.

**Figure 3.3**  
**CBAT and CBAT Companion Production Requirements and Initial Operational Capabilities**

mounted maneuver areas for dismounted maneuver tasks. Consequently, the facility requirements include an additional “dismounted maneuver area” requirement that, in effect, shuts down some dismounted maneuver areas while mounted maneuver training is conducted.

### CBAT Requirements

The Air Force plan pictured in Figure 3.3 starts small, with an initial operational capability for tier-1 AFSCs in FY 2008. Using our estimate of the CBAT POI (discussed in Chapter Two) and the RAND Schoolhouse Model, we simulated production levels of 1,200 and 6,600 students to determine the required resources. Assuming a washout rate of 8.4 percent,<sup>8</sup> the model calculated the number of entrants required to produce approximately the required number of graduates for each case (Table 3.2).

<sup>8</sup> The 8.4-percent washout rate is based on a historical analysis of the SF training program. Since CBAT most closely resembles SF training, we used the SF washout rate. CBAT is more physically challenging than SF training, so the rate may underestimate the actual effect.

**Table 3.2**  
**Average Annual Production**

| Target Number of Graduates | Entries | Losses | Actual Graduates |
|----------------------------|---------|--------|------------------|
| 1,200                      | 1,366.8 | 110.5  | 1,256.3          |
| 6,600                      | 7,272.3 | 615.0  | 6,657.3          |

### Housing Requirements

For a production level of 1,200, the simulation estimates an average attendance of 135 students a day (Figure 3.4). The actual load ranged from a low of 94 to a high of 204.<sup>9</sup> The average dormitory houses 300, so one dormitory would be sufficient to house the students. If 8-man tents are used instead, 26 to 30 tents would be required.<sup>10</sup>

For a production level of 6,600, the simulation estimates an average attendance of 717 students a day (Figure 3.5). The actual load ranged from a low of 509 to a high of 853. The average dormitory houses 300, so three dormitories would be required to house the students. If 8-man tents are used, 110 tents would be required.

**Figure 3.4**  
**Actual Daily Student Load for Production of 1,200 Graduates per Year**

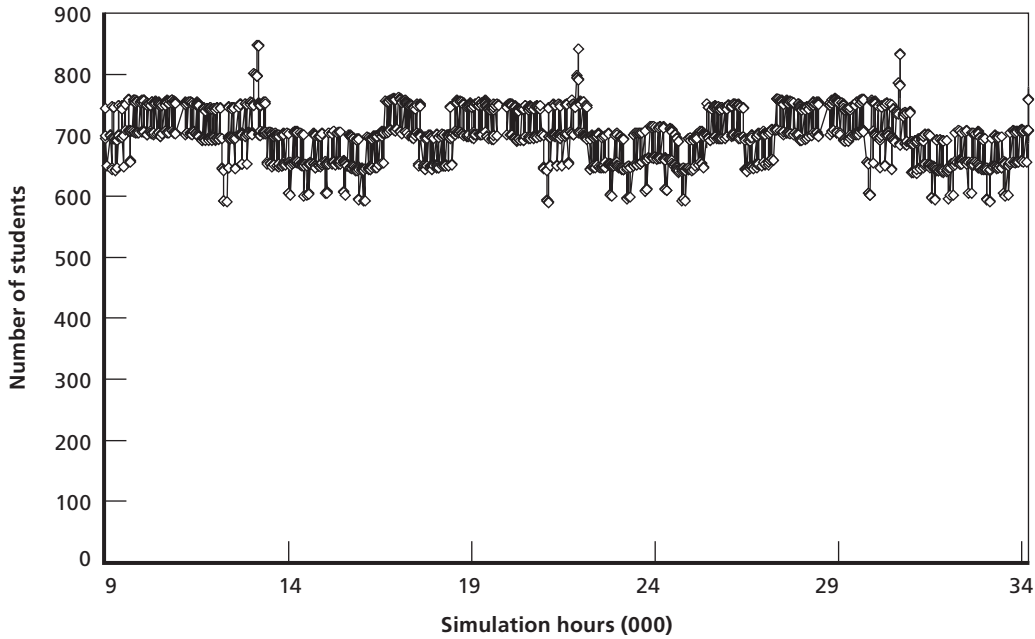

NOTE: Graph represents a span of three years.

RAND MG624-3.4

<sup>9</sup> The RAND Schoolhouse Model uses scheduling software that models the lower inputs during February, March, April, and May, when accessions are lower. The model also simulates holidays (including Christmas break).

<sup>10</sup> The Combat Convoy Course at Camp Bullis, Texas, provides an excellent model for tent costs. Experience at Camp Bullis suggests that replacement costs are a critical factor in the usage of tents.

**Figure 3.5**  
**Actual Daily Student Load for Production of 6,600 Graduates per Year**

NOTE: Represents a span of three years.  
 RAND MG624-3.5

**Instructor Requirements**

We ran the schoolhouse simulation for four years and averaged the results (see Table 3.3). The simulation indicated a need for only 32 instructors, but this estimate did not take into account other demands on an instructor’s time, such as preparation, updating the Technical Training Management System, student counseling, or other required tasks. Our discussions with actual instructors indicated that they devote an extra 20 hours per week to nonplatform instruction activities. We therefore estimate a requirement of 40 instructors for an annual production of 1,200 graduates and 191 instructors for an annual production of 6,600 graduates.

**Table 3.3**  
**Instructor Requirements**

| Factor                            | Target Number of Graduates per Year |         |
|-----------------------------------|-------------------------------------|---------|
|                                   | 1,200                               | 6,600   |
| Instructor hours per year         | 38,400                              | 207,210 |
| Simulation instructors used       | 32                                  | 128     |
| Average instructor training hours | 25.0                                | 33.7    |
| Estimated total instructors       | 40                                  | 191     |

NOTE: The number of simulation instructors does not account for noninstruction hours (preparation, administrative tasks, additional duties, leave, etc.).

Additionally, our manpower estimate did not include administrative support, chain-of-command, or training development personnel.

### Training Device Requirements

Table 3.4 shows the simulation results for required training devices at the 1,200- and 6,600-per-year production levels. Because the simulation itself does not include the effects of break-

age, we have also calculated a 20-percent increase over the simulated requirement to account for the breakage and repair of training devices.

Table 3.5 lists the annual consumable requirements for both cases. The simulation specified one kit for each student during certain course content. We calculated the number of times a kit is called for, not the amount of ammunition used. If, for instance, an M-4 ammunition kit contains 100 rounds, the simulation results indicate a need for 138,500 rounds of ammunition annually for the 1,200 production level.

### **Training Facility Requirements**

Table 3.6 lists the calculated facility requirements for producing 1,200 and 6,600 graduates per year. In each case, some dismounted maneuver areas are closed during mounted maneuver. Otherwise, a separate road network is required for mounted maneuver. We assumed that the road network would cover the perimeter of the base and that some roads would traverse the dismounted maneuver areas. In the 1,200-per-year case, eight dismounted maneuver areas are required for the mounted maneuver content. In the 6,600-per-year case, 24 dismounted maneuver areas are required. The last row, mounted maneuver, does not depict a range or acreage, but rather the requirement for a number of road networks. For each case, we also calculated the requirements to provide an additional 10-percent and 20-percent as backup (for maintenance, unforeseen events, etc.).

### **Acreage Training Range Area Requirements**

Table 3.7 shows the acreage required for dismounted maneuver, as well as the effects of closing some dismounted maneuver areas to accommodate mounted maneuver. The simulation required 1,040 acres for a production level of 1,200 and 3,640 acres for a production level of 6,600 graduates. The table also calculates maintenance factors of 10 and 20 percent. We did not calculate the additional acreage required for dormitories, classrooms, vehicle parking, device and ammunition storage, and administrative buildings.

### **Summary of CBAT Requirements**

Table 3.8 compares the cases and shows the requirements for getting CBAT to an initial operating capability of 1,200 graduates per year and a full operating capability of 6,600 graduates per year.<sup>11</sup>

If the CBAT operation must also house the CBAT companion course, additional space and facilities will be required. We did not have enough information to build a detailed POI for the CBAT companion course. In the next two chapters, we develop a justifiable draft for a CBAT companion course curriculum.

---

<sup>11</sup> Our estimates do not obviate the need for a course resource estimate. Once an organizational management structure and a location have been chosen, an official estimate would be accomplished. Still, the results presented here are useful for planning purposes.

## Developing a CBAT Companion Course

---

### Introduction

In today's military environment, deployed Air Force personnel, whose normal duties would ostensibly not require them to venture off base (tier-3), are in fact often asked to go outside the secure perimeter of the military base—OTW. The purpose of our CBAT companion research was to determine the following in view of this environment:

1. What, if any, predeployment combat training do tier-3 individuals need?
2. Should that training differ by AFSC or by deployment location?

The research design focused most heavily on addressing the first question but did allow tentative conclusions on the second question.

While the CBAT concept changed during the course of this study, the changes did not affect the survey we used to develop requirements for a CBAT companion course. The survey and the resulting data are concept-independent and therefore useful regardless of the direction the Air Force takes for ground combat training.

Several major steps in developing an effective training program are common to such training development approaches as Instructional Systems Design (the Air Force's formal approach).<sup>1</sup> Because of the limited scope of our research, we could not accomplish all the usual training development steps. Instead, we opted to start the process by defining performance and training goals.

In defining the goals, we aimed to specify (a) the aspects of performance that are relevant to tier-3 deployment and (b) the levels of performance that are desired. We began by exploring various data sources on tier-3 deployment experiences to define categories of training that should be included in the CBAT companion. The most promising source of information was the Air Force Lessons Learned Database.<sup>2</sup> We searched the database for any descriptions of training deficiencies of deployed personnel using a variety of search terms, but the search ulti-

---

<sup>1</sup> We address only one step toward developing an effective training program in this chapter but do suggest additional steps as follow-on research. For further explanation of important training design steps, see Campbell, 1988, pp. 177–215.

<sup>2</sup> The Air Force Lessons Learned Database is maintained by Headquarters Air Force, Lessons Learned Division. The database uses after-action reports and Web-based technologies to improve the information that is passed on to Expeditionary Air Forces.

mately produced only a handful of relevant results.<sup>3</sup> These can be summarized in terms of three main training categories: combat training, joint environment, and cultural issues (with only 11, 9, and 9 lessons learned in each category, respectively).

Because we gleaned so little information on predeployment training needs from the Air Force Lessons Learned Database, we developed a method for collecting additional information to ensure that no relevant training category would be overlooked. The method proceeded in four stages. In stage 1, information was collected from focus groups to inform the content of a stage 2 survey. In stage 2, a variety of tier-3 personnel were surveyed to confirm and supplement the information collected in stage 1. In stage 3, follow-up interviews were conducted to supplement the survey. In stage 4, training subject-matter experts (SMEs) sorted the information gathered in the first three stages to create a comprehensive set of training content categories for the CBAT companion course and estimated desired performance levels for each.

## **Stage 1: Focus Groups**

Stage 1 involved two structured focus groups. Their purpose was to establish a broad understanding of the experiences of tier-3 personnel in a deployed setting. The focus groups were exploratory and were intended to inform the research questions and content of stage 2.

### **Participants**

Focus groups were conducted at two Air Force bases. When the Air Force Manpower Agency (AFMA) was selecting these bases, we asked that the focus groups include individuals who had recently been deployed to such locations as Iraq and Afghanistan and individuals representing a wide variety of AFSCs. Both Eglin AFB and Hurlburt Field met these requirements. One focus group was conducted at each base. AFMA selected a sample of 296 Air Force personnel (144 at Eglin and 151 at Hurlburt), to whom we sent email invitations to participate in the focus groups. AFMA was unable to identify who had been recently deployed, so we explained in the email invitation that the focus group was only for personnel who had recent deployment experience. The sample was stratified by AFSC family such that all AFSC families had an equal chance of participating. The sample was limited to E-5s through E-7s to ensure that rank differences did not influence willingness to speak candidly in the focus group. As a result of AFMA's recruiting efforts, a total of 15 individuals from the two bases volunteered to participate.

### **Protocol**

The focus group protocol started with informed consent, then introductory questions about a typical day in a deployed location. We then asked whether the participants had been OTW; if so, why; and what type of dangerous events they had experienced. After fully discussing their

---

<sup>3</sup> Details on the search terms and the results can be found in Appendix D.

experiences with dangerous events, we then asked questions about the local people and their culture. Last, we asked for their thoughts about training.<sup>4</sup>

We were particularly concerned that some people's preference for one type of training over another or dislike of training altogether might influence their responses, so we took steps to ensure that participants were blind to the broader goals of this study. For example, participants were told that the purpose of the focus group was to understand and describe the entire domain of deployed experiences that someone might encounter; participants were not told that the purpose of the focus group was to develop a training program. We did, however, ask about training occasionally throughout the focus groups; at the end of each focus group (after all experience questions had been exhausted), we spent approximately 15 minutes discussing whether or not training on various subjects would, in their opinion, be beneficial.

## Results

The main purpose of the focus group was to develop a comprehensive picture of the types of experiences tier-3 people have while deployed. In this respect, the focus groups were very successful. From the focus group results, we developed

1. a broad list of experiences that the participants considered threatening to their safety
2. new categories of relevant deployment experience, such as interacting with third-country nationals (TCNs).<sup>5</sup>

The findings from the focus groups also raised several new research questions that were explored further in the stage 2 survey. First, although all participants had been deployed, only about half had ever been OTW. Those who had been OTW maintained that they were the exception rather than the rule. They suggested that, even though they had left the secure base, other people in their AFSCs would not be likely to do so. Despite the assertions to the contrary, the diversity of AFSCs that focus group participants who had been OTW represented suggested that members of any AFSC might go OTW. This led us to ask how many tier-3 people actually go OTW, whether those who do go OTW are in a particular AFSC, or whether going OTW is unrelated to the AFSC.

Second, we learned that the likelihood of going OTW depends on (1) the country of deployment, (2) the base of deployment, and (3) the threat level assessed at the time and location in which a person might go OTW. For example, one participant was deployed in Kuwait and billeted off base. He therefore spent a majority of his time OTW. In contrast, other individuals had been deployed to Iraq; some of them had gone OTW but indicated that, in most cases in Iraq, tier-3 people are not expected or even permitted to leave the base.

Third, we discovered that there was considerable interaction between Air Force personnel and (1) the local population, (2) TCNs, and (3) other joint forces. We had anticipated that, perhaps, some culture and language training would be relevant but not that such training might

---

<sup>4</sup> Transcripts of these focus groups are available on request, with Air Force approval.

<sup>5</sup> TCNs are foreigners to the United States and to the country of interest. They perform work in the country but are not citizens of the country or members of the U.S. mission.

be necessary for interaction with joint forces and TCNs. In fact, reactions to that idea were mixed; some participants, for example, indicated that communication with joint forces was not a problem, while others reported many problems, including determining whose rules to follow (e.g., Army or Air Force rules) and how to use Army equipment. Additionally, it appeared that tier-3 personnel were in contact with TCNs much more often than with members of the local population.

In response to questions about a need for training, some indicated that training would never provide enough preparation for OTW situations, while others described in detail the types of training they thought would be beneficial. This supported our initial assumption that people might have preconceived opinions about the usefulness of this type of training. These differences could be due to variations in satisfaction with past training programs, in perceptions of the usefulness of training in general, or simply in experience OTW. Because our intent was to design a general course, we did not want negative training experiences to influence survey responses. Therefore, the survey questions emphasized the frequency of the incidents and situations they experienced.

## **Stage 2: Survey**

We used the information collected in the focus groups to develop the survey. Its primary goals were to

- determine how many and what type of tier-3 individuals go OTW
- determine what potentially dangerous experiences they have while OTW
- add to our list of incidents through open-ended responses to ensure that the list used to create training categories is comprehensive.

## **Participants**

The sample included personnel from all AFSC families, all enlisted ranks, and officers through O-6 but excluded members of the seven tier-1 and -2 AFSCs. Because we were interested in deployment experiences in combat areas, we also limited our sample to personnel who had been deployed to either Iraq, Afghanistan, or Kuwait in the last five years. Iraq and Afghanistan were chosen because they are high-threat locations; personnel may rarely leave the base but are more likely to encounter dangerous situations when they do. Kuwait was selected as a comparison location because personnel in Kuwait are typically free to leave the base and are less likely to encounter dangerous situations when they do. AFMA drew a random sample of 329 Air Force personnel from those who met the previously mentioned requirements. AFMA emailed invitations to participate in the online survey. Of the 329 people who were invited, 117 accessed the survey, and 108 completed at least part of the survey. Although this response rate is consistent with previous Air Force surveys, it does indicate that a significant proportion of the invited personnel are not represented in the present data. It is worth noting that their responses might differ from those presented here.

## Contents

The survey asked if and how often individuals go OTW. For those who had gone OTW, it asked how often they had encountered situations from a list developed from the focus group results. These situations included such things as encountering improvised explosive devices (IEDs) or huts by the side of the road and being approached by local people.

To improve our knowledge of the range of threatening incidents, we created a series of open-ended questions asking these Air Force personnel to describe their (1) experiences working in a joint environment, (2) interactions with locals and TCNs, (3) dangerous situations OTW, (4) training they felt would have been useful for these situations, and (5) what they learned on the job when they were deployed that helped them handle dangerous situations.

## Results

The survey showed that 60 percent of the deployed participants had gone OTW at least once in the previous five years. Tables 4.1 through 4.4 organize the results by duty AFSC, major command (MAJCOM), grade, and deployment location, respectively. These tables show that the experience of going OTW is not limited to a particular AFSC, MAJCOM, grade, or location. In fact, even AFSCs that would seem unlikely to go OTW (e.g., 4V0X1, Optometry; 4Y0X1, Dental Assistant; 3S2X1, Education and Training) reported doing so. Table 4.4 also confirms our expectation that people tend to go OTW more often in Kuwait than in Iraq or Afghanistan.

Note that, while all MAJCOMs were represented in the invited sample, not all were represented in the sample that responded to the invitation (e.g., Special Operations Command is not represented in the survey data but is represented in the focus group data). Also, while a majority of the individuals represented in the country categories had deployed to only one of the three locations of interest, seven individuals reported that they had deployed to Kuwait and Iraq; one person reported deployments to Kuwait and Afghanistan; and one person reported deployments to all three locations. Because the answers of the individuals who had deployed to more than one location are included in each of the location analyses, these analyses have a small amount of double counting. Seven individuals did not report deploying to any of the three locations of interest. This was surprising because all invitees had been selected because they had deployed to Kuwait, Iraq, or Afghanistan. Two of the seven did, however, report their deployment locations as “classified” and “southwest Asia.” In addition, in several categories, the small samples mean that the percentages going OTW should be viewed with caution.

Table 4.5 shows how many times the participants left the base, and Table 4.6 shows the farthest they traveled from the secure base. Both tables show the responses of all survey participants, as well as those who reported being deployed to Iraq, Afghanistan, and/or Kuwait. Table 4.5 shows that, of those who went OTW, a majority did so more than once. Surprisingly, the results in Table 4.6 show that several people in Iraq had traveled farther than 50 miles from a secure base.

The second objective of the survey was to determine what potentially dangerous experiences tier-3 personnel have while OTW. Appendix E includes a full list of experiences by deployment location; Table 4.7 lists all events experienced by more than ten people in our sample.

**Table 4.1**  
**Personnel Going OTW, by Duty AFSC**

| AFSC Families |                          | Sample Size | Going OTW |         |
|---------------|--------------------------|-------------|-----------|---------|
|               |                          |             | Number    | Percent |
| Officers      |                          |             |           |         |
| 1XXX          | Operations               | 8           | 6         | 75      |
| 2XXX          | Logistics                | 3           | 2         | 67      |

NOTE: Where total sample size exceeds 65, the survey questions were received both by individuals who had not been OTW and those who had been. All other items were answered only by those who had been OTW.

Last, while the situations were not necessarily dangerous, the following survey findings also suggest important areas for predeployment training:

- 43 percent (46 out of 108) reported working in a joint environment.
- 26 percent (28 out of 108) reported traveling in a convoy.
- 11 percent (12 out of 108) reported being injured, although none of the injuries were combat related.
- 37 percent (40 out of 108) reported carrying a weapon, although only one reported ever firing it to protect someone. Of those who did carry a weapon, 31 people reported carrying an M-16; seven reported carrying an M-9; and one carried an M-4.

To accomplish survey goal 3, we added these results, the findings from the survey items in Table 4.7, and the survey participants' open-ended responses about additional experiences to the list of experiences to be used in the SME sorting task.

### **Stage 3: Follow-Up Interviews**

#### **Participants**

At the end of the survey, participants were asked whether they would be willing to participate in a follow-up interview. Seventeen people agreed to do so and, of those, five participated in scheduled telephone interviews.

#### **Method**

We studied each interviewee's survey responses in advance and tailored our interview questions to the individual. We asked the interviewees to elaborate on each item that they indicated they had experienced on the survey and about each open-ended response that they provided on the survey. In addition, all participants were asked to describe any other potentially dangerous situations they had experienced OTW, any interaction with locals or TCNs, and any training that might have been helpful.

#### **Results**

Despite the small sample, the interviews were a rich source of information. The additional descriptions of experiences OTW were used to supplement the list of incidents from the survey and focus groups. Many of the experiences described during the interviews expanded on those mentioned previously in the focus groups or the surveys. However, two areas of training suggested during the interviews that were not mentioned previously were (1) training for women in how to assert their authority when they are working with TCNs and (2) training to prevent injury on base resulting from noncombat recreation.<sup>6</sup>

---

<sup>6</sup> Causes of recreational injuries include rough sports, such as tackle football.

## Stage 4: Sorting by Subject-Matter Experts

The purpose of having SMEs sort the final list of incidents was to develop a set of training content categories for use in designing the CBAT companion course.

### Participants

Air Force trainers and training developers were asked to participate as SMEs in the development of CBAT companion training categories. A total of seven SMEs participated.

### Method

We used 420 incidents that participants in the focus groups, survey, and interviews had described. Each incident was numbered and printed on a slip of paper. The incidents were placed in a random order and divided into two sets; half the SMEs addressed the first set of incidents, and the other half took the second set.<sup>7</sup>

The first part of the task was completed individually. Each SME received a description of the background and the purpose of the task. We then asked the SMEs to sort one of the two sets of incidents (each set contained approximately 200 incidents) into piles representing “training categories.” They were instructed to consider the following questions when reading the incidents and categorizing them:

1. How would I best prepare/train Air Force personnel to deal with this incident? What do they need to know, and what skills do they need to learn to deal with this incident? Is the knowledge and skill needed for this incident applicable to other incidents? If so, the incidents should be placed in the same category.
2. Should I combine some of the categories I have created? Should I break up a category into two (or more) categories?
3. If I wanted to train someone to handle all of the incidents provided, how would I break the training into sections to make the course sensible to the students? Do my categories capture that idea?

After the SMEs completed the sorting task, they were asked to label and describe each category they created.

For the second part of the task, SMEs were asked to meet in groups of two or three and arrive at consensus for the categories. After arriving at consensus, the group then produced a new set of category labels and descriptions.

In the last part of the task, the SMEs were asked to answer a series of questions about the relative importance of each category of training, the amount of time needed to provide the training, the required proficiency that should be achieved in training, whether any important training categories appeared to be missing from those they created based on the incidents, and whether any categories were not important for predeployment training.

---

<sup>7</sup> See Appendix F for a complete list of these incidents and how the SMEs categorized them.

## Results

The seven SMEs successfully sorted the incidents into meaningful categories. Their results are shown in Table 4.8.

In part 3 of the SME task, the groups were asked several questions about the categories they had developed. First, the three groups were asked whether there were any categories that were needed but not represented by those they created from the incidents. All SME groups indicated that there were no missing training categories.

The groups were then asked to estimate training times and required levels of performance for each group category. These results are also listed in Table 4.8. Estimates of required levels of performance varied somewhat across groups. More specifically, one group tended to suggest A or B levels for nearly all categories, while the other two groups tended to suggest 1a or 2b levels for nearly all categories.

Estimates of the total time needed for each category of training also varied across groups. Summing the lowest estimated times for the groupings in Table 4.8 suggests a minimum training time of five days. Summing the highest estimated times for the groupings in Table 4.8 suggests a maximum training time of 10 to 15 days. These estimates are, however, tentative. Even though they could not imagine predeployment training taking any less time than they had suggested, the SMEs did admit that they were not certain that they were qualified to make such estimates.

Differences in the SME group estimates for training time could be partly due to variations in their beliefs regarding (1) the suggested depth of training and (2) whether training should be administered in realistic field simulations, rather than briefings, classroom lectures, or online. In addition, some SMEs felt that, because they did not have personal experience with combat training, the time estimates were difficult to judge.

SMEs were also asked to indicate which categories would require situational training or simulation exercises and which could be accomplished through classroom lectures, briefings, or online training. The SME groups indicated that situational training is appropriate for vehicle and convoy procedures; forward operating base (FOB) procedures; self-aid buddy care (SABC); chemical, biological, radiation, nuclear, and explosives (CBRNE); UXO; use of force (UOF); rules of engagement (ROE); situational awareness; language; weapons; and small-unit tactics. They also decided that cultural, operational security (OPSEC), intelligence, TCN duties, and joint operations training could be conducted via briefings, in classroom settings, or via computer-based training. However, full implementation of the training would require situational or “real world” simulation. Most SMEs agreed that more situational or “real world” simulation training for all categories is better, if possible.

The SME groups agreed that all deployed personnel need this training, and most suggested that more training is better than less training for all categories.<sup>8</sup> They also emphasized

---

<sup>8</sup> There is some suggestion that better management of operational risks is sufficient to handle these incidents. This is a continuous, systematic process of identifying and controlling risks in all activities according to a set of preconceived parameters by applying appropriate management policies and procedures. The process includes detecting hazards, assessing risks, and implementing and monitoring risk controls to support effective, risk-based decisionmaking. In this case, operational risk management is not a sufficient tool for reducing the incidents tier-3 personnel have experienced. While only a handful of personnel experienced some of these incidents, the wide range of AFSCs suggest important systemic training needs.

**Table 4.8**  
**SME Categorization of Survey Incidents**

| SME Group                 | Incident Category  | Training Time | Proficiency Level |
|---------------------------|--|---------------|-------------------|
| Culture and language      |  |               |                   |
| 1                         | Basic language skills  | 2.5 hours     | 1a                |
| 1                         | Culture—differences in local customs   | 1 hour        | B                 |
| 2                         | Cultural awareness   | 8 hours       | A                 |
| 3                         | Culture training   | 8 hours       | 1a                |
| 3                         | TCN duties   | 6 hours       | 1a                |
| Weapons                   |  |               |                   |
| 1                         | Weapons  | 8 hours       | 3c                |
| 2                         | Weapon firing  | 1 day         | 3b                |
| 3                         | Weapon training  | 24 hours      | 2b                |
| Transportation operations |  |               |                   |
| 1                         | Convoy driving   | 8 hours       | 2b                |
| 2                         | Vehicle and convoy operations  | 4–8 hours     | A                 |
| 3                         | Convoy procedures  | 24 hours      | 2b                |
| Situational awareness     |  |               |                   |
| 1                         | OPSEC brief  | 30 minutes    | B                 |
| 1                         | Situational awareness—planning surroundings—develop plans—know surroundings                                | 4 hours       | 2b                |
| 2                         | Situational awareness/OPSEC  | 8 hours       | B                 |
| 3                         | Intel  | 4 hours       | 1a                |
| Small unit tactics        |  |               |                   |
| 1                         | Threats—ROE and UOF  | 8.0 hours     | 2b                |
| 2                         | ROE and local procedures   | 4–8 hours     | A                 |
| 3                         | Small unit tactics   | 8 hours       | 2b                |
| 3                         | FOB procedures   | 2 days        | 2b                |
| Individual tactics        |  |               |                   |
| 1                         | Equipment brief—care of, communication uses  | 1 hour        | B                 |
| 1                         | SABC, CBRNE, and UXO   | 8 hours       | 2b                |
| 2                         | Issue, size, and formalize personal equipment and protective gear  | 1 day         | 2b                |
| 2                         | Combat skills simulations—situation scenarios: vehicles, emergency actions, chemical training, CBRNE, etc. | 3 days        | 2b                |
| Joint operations          |  |               |                   |
| 1                         | Joint operations briefing—differences between militaries   | 2 hours       | B                 |

that personnel working in one of the specific training areas (e.g., convoy drivers) would require much more training in that area than what was suggested here. When asked whether any training category was less important or not needed, all groups agreed that all categories (except “Joint Ops Issues”) were necessary and equally important.

When asked, all SME groups concurred that the need for training depends on the location of the deployment. For example, one group said that someone deploying to South America or Germany may not need all the training. But someone deploying into a theater of combat operations (i.e., Southwest Asia), needs all the training. One group also discussed deployment to bases in safe locations that routinely supply personnel to unsafe combat locations (e.g., deployment to a base in Germany that supports operations in Iraq). The group concluded that personnel deploying to these bases need predeployment training. The same group also concluded that all combat deployments (regardless of location) require weapon training.

## Recommendations

Given the results we have just described, we developed a series of recommendations about attendees, content, and course length.

### Who Should Attend

We believe that all personnel deploying to combat locations or to locations (e.g., Germany) where they may receive orders to deploy to a combat location should attend the CBAT companion course prior to deployment. The finding that 60 percent of the personnel responding to our survey report have gone OTW at least once and the focus group, survey, and interview findings that all personnel, regardless of AFSC, MAJCOM, and pay grade, have some non-trivial chance of going OTW at some point during their deployment suggest that all tier-3 personnel being deployed to combat locations should receive the CBAT companion training. Although we did not investigate who should *not* attend predeployment training for this study, the Air Force should take special care in deciding who to exclude.

Finally, just as it is important not to overlook personnel who may deploy to a combat location from a noncombat deployment, it is important not to overlook personnel deploying to locations that are considered relatively safe (e.g., Kuwait). The latter may spend more time OTW than those in more dangerous locations and may therefore have more opportunities to experience some of the events we have explored.

### Course Length

The course should last at least ten days. This suggestion is based on an intermediate point between the lowest and highest time estimates the SMEs provided. Our evaluation of the types of training that need to be covered suggests that the lower SME estimates are not long enough to provide the necessary breadth and depth of training. Moreover, this training time estimate is only speculative and would ideally be confirmed by actually testing the performance of tier-3 personnel after completing various lengths of training.

## Content

Training should cover all the categories identified in the individual SME sort and suggested in the items we derived from the Air Force Lessons Learned Database. The experiences tier-3 personnel reported support the relevance of these categories. For example, we advise including the category of joint operations education (even though it was the only category that the SMEs did not consider necessary) because several of the lessons learned mentioned difficulties arising from joint operations and because 82 percent of the survey respondents reported working with people from the Army, Navy, Marines, or British military.

Training should also cover the variety of incidents collected in this study. We suggest that training developers build the training course simulations, examples, tests, and other course exercises and content not only from their own experience in combat training but also from the personnel experiences we have collected. Specifically, the training should use the incidents the SMEs sorted, the focus group transcripts, the interview transcripts, and the lessons-learned incidents.<sup>9</sup> This will ensure that the entire content of every training category is carefully considered and covered in the course.

Training should involve realistic field simulations or other creative training solutions. Throughout the interviews, focus groups, and open-ended survey comments, we were told that many of the hour-long briefings and online tutorials are not helpful. This comment came up with respect to such categories as language and culture, IEDs and UXOs, and safety equipment. Some even suggested that realistic experience of what to do when hearing mortar fire would be more helpful.

Several general suggestions for training techniques can be applied here.<sup>10</sup> First, training that is more similar to deployment conditions will be more likely to transfer to real deployment conditions. Second, training skills that are applied in a variety of contexts have a greater chance of being useful and effective in novel situations. Third, behaviors that are repeatedly enforced by training will become automatic rather than conscious in field situations. All these are desired outcomes of predeployment training. When applicable (e.g., weapons, convoy, or small group tactics training), the more that they can be achieved through repeated and realistic simulations, the better.

The focus groups also suggested another creative solution for achieving the desired performance that does not involve training per se. They suggested that, to improve language performance, it would be best to teach only a few basic phrases, then provide everyone with laminated cards or pamphlets with more phrases and information about the country and culture that they could carry with them. The Army and Marines supply such information cards to their personnel.

Training should include integrated rather than sequential training of several categories. There are many ways to integrate several training categories to accomplish twice as much training in less than twice the time. For example, conducting joint operations with Army personnel

---

<sup>9</sup> These resources are documented in the appendixes.

<sup>10</sup> For a summary of the learning conditions that lead to retention and transfer of training, see Goldstein and Ford, 2002.

during convoy training could be more effective for joint operations training than providing a briefing on joint operations training and then training on convoy operations separately.

One of our SME groups did clarify that, when it was estimating times for each category, the members expected the training to be integrated. For example, they estimated the training time for weapons to be approximately one day but also expected that day to be spread over a week-long course involving a little practice each day. Weapon training could be implemented as follows: training on proper handling and practice at a shooting range one day, then in a simulated neighborhood environment the next day, again during an ambush in convoy training, and again during small team tactics. Similarly, training on local culture and situational awareness could be infused throughout the entire course.

### **Refreshing the Content**

CBAT companion training should be updated regularly using short, open-ended response surveys of all personnel returning from deployments. We suggest that the Air Force regularly survey personnel returning from deployments and use the results to enhance or adjust training in general as new issues arise. Clearly, the Lessons Learned Database is a move in that direction. However, personnel are currently not explicitly asked to provide information about needed predeployment training or about the wide variety of OTW experiences, making the available information sparse and its content unrepresentative of individuals' experiences. A short return-from-deployment survey would alleviate these issues and ensure that up-to-date, just-in-time training is always available.

## Next Steps

---

In this monograph, we evaluated the current CBAT course outline, comparing it to the training outlines for other courses, and concluded that CBAT will resemble an abridged version of the SF training program. On that assumption, we built a strawman CBAT POI and used it with the RAND Schoolhouse Model to estimate the resources required for a CBAT course. This is not a complete picture of the resources needed for all CBAT elements because we were not able to calculate the cost of facilities or consumables. We have, however, provided estimates for facilities and consumables to help the user calculate their costs.

The addition of the SF career field to tier 2 does increase the total cost and size of CBAT considerably. Additionally, we did not include the transportation costs involved in moving approximately 5,000 individuals per year from Lackland AFB (BMT) to the training location for CBAT and then back to Lackland (to finish schoolhouse training). The whole idea of a “common” course is to commonize elements of the training. The inclusion of SF, as the largest single ground combat AFSC, does help develop a large center of excellence for ground combat. Ultimately, the larger the common element, the more likely it can affect Air Force culture. A small school, with little residual capacity, may be overlooked by the larger Air Force and the individual AFSCs as they seek answers for the changing nature of war in their AFSCs.

We could not estimate the resource requirements for the CBAT companion course because a course outline or training standard did not exist at the time of this writing. Using a survey of previously deployed tier-3 personnel, we were able to develop a list of 400-plus incidents they had faced. With the help of AETC SMEs, we were able to group the incidents into training categories. As a result, we now have a well-defined requirement for CBAT companion training.

The next step would be to develop a CBAT companion course training standard from which a strawman CBAT companion course POI could be built. We could then run the RAND Schoolhouse Model with both the CBAT and CBAT companion courses implemented. At that point, we would have a better estimate of the ultimate size of resources, such as land area and facilities, to start selecting a location for training.

It may also be possible to utilize more than one location for CBAT, thereby taking advantage of existing resources and facilities.

Additionally, during our research, the Air Force started work to increase BMT by 10 days. Most of the increase is for foundational training in combat-related items. “BMT+10” has an effect on CBAT and CBAT companion training. BMT training ought to include an intro-

ductory standard for combat skills training for all airmen. Consequently, it will most likely reduce the required training in the two courses. That also has an effect on the total required resources for a CBAT campus, or campuses, depending on the training approach taken.

While we think BMT+10, as well as the 19-hour unit training, are significant steps, maintaining combat skills will require regular continuation training for all non-ground combat AFSCs. The ground combat skills are most likely perishable. Our research did not identify the considerable costs of the continuation training that will be required.

Another issue is that many airmen currently on active duty will not have been exposed to BMT+10, and the 19-hour unit training may not be sufficient for the current threat environment.

## CBAT Course Description

---

The following course description outlines the seven combat skill areas and 38 specific combat tasks in which CBAT students will receive instruction. The outline is reproduced verbatim as of the version dated October 20, 2005. Table A.1 provides the proficiency codes commonly used by the Air Force in its training management documents, including this course description.

**Table A.1**  
**Proficiency Code Key**

|                                       | Scale Value | Definition: The individual   |
|---------------------------------------|-------------|--|
| Task performance levels               | 1           | Can do simple parts of the task. Needs to be told or shown how to do most of the task. (extremely limited)       |
|                                       | 2           | Can do most parts of the task. Needs only help on hardest parts. (partially proficient)                          |
|                                       | 3           | Can do all parts of the task. Needs only a spot check of completed work. (competent)                             |
|                                       | 4           | Can do the complete task quickly and accurately. Can tell or show others how to do the task. (highly proficient) |
| Task knowledge levels <sup>a</sup>    | a           | Can name parts, tools, and simple facts about the task. (nomenclature)   |
|                                       | b           | Can determine step by step procedures for doing the task. (procedure)  |
|                                       | c           | Can identify why and when the task must be done and why each step is needed. (operating principles)              |
|                                       | d           | Can predict, isolate, and resolve problems about the task. (advanced theory)                                     |
| Subject knowledge levels <sup>b</sup> | A           | Can identify basic facts and terms about the subject. (facts)  |
|                                       | B           | Can identify relationship of basic facts and state general principles about the subject. (principles)            |
|                                       | C           | Can analyze facts and principles and draw conclusions about the subject. (analysis)                              |
|                                       | D           | Can evaluate conditions and make proper decisions about the subject. (evaluation)                                |

<sup>a</sup> A task knowledge scale value may be used alone or with a task performance scale value to define a level of knowledge for a specific task. (Example: b and 1b)

<sup>b</sup> A subject knowledge scale value is used alone to define a level of knowledge for a subject not directly related to any specific task, or for a subject common to several tasks.

## Course Description

General Comments: Provide everyone the opportunity to lead; have a culmination FTX (18–24 hours) that integrates practical applications of most aspects of course include overnight in field.

- |       |   |    |
|-------|---|----|
| 1.    | Weapons training. This is weapon safety for combat and close quarter operations with live fire (ammunition). Weapons safety should include strengths and limitations of all weapons, as well as focusing on safety in a team environment.   |    |
| 1.1   | Weapons Procedures  |    |
| 1.1.1 | Weapons safety  | 3c |
|       | <ul style="list-style-type: none"> <li>• Handling</li> <li>• Operations (all environments)</li> <li>• Characteristics of fire (fields of fire/types of fires)</li> </ul>  |    |
|       | NOTE: Should be more in depth than basic CATM training for all. May require more than 1.5 hours when reviewing all weapons.   |    |
| 1.1.2 | Weapons security  | 3c |
| 1.1.3 | Sign out/turn in weapons  | 3c |
| 1.1.4 | Weapons familiarization   | B  |
|       | <ul style="list-style-type: none"> <li>• Weapons characteristics (M4/M9)</li> <li>• Munitions characteristics</li> <li>• Weapons effects</li> </ul>   |    |
| 1.1.5 | Weapons Maintenance   | 3c |
|       | <ul style="list-style-type: none"> <li>• Clear, disassemble, clean, inspect for serviceability, lubricate, assemble, and function check</li> <li>• Maintaining ammunition and magazines</li> </ul>  |    |
| 1.2   | Weapons qualification/proficiency   |    |
| 1.2.1 | Qualify/proficiency on the 5.56mm Rifle   | 3c |
|       | <ul style="list-style-type: none"> <li>• Weapons zeroing</li> <li>• Correct malfunctions without assistance</li> <li>• Transition from rifle to hand gun and back</li> <li>• Night fire with night vision equipment</li> </ul>  |    |
| 1.2.2 | Qualify/proficiency on the 9mm Pistol   | 3c |
|       | <ul style="list-style-type: none"> <li>• Correct malfunctions without assistance</li> </ul>   |    |
| 2.    | Tactical Field Operations   |    |
| 2.1   | Receive and understand a Warning Order  | B  |
| 2.2   | Individual Tactic Skills  |    |
| 2.2.1 | Hand and Arm Signals  | 2b |
| 2.2.2 | Individual movement techniques  | 2b |
|       | <ul style="list-style-type: none"> <li>• Rush, low crawl, high crawl, moving with stealth</li> <li>• How to breach and cross wire obstacles</li> <li>• Border/perimeter obstacles</li> <li>• Use PPE to include body armor, hearing, and eye protection</li> <li>• SERE techniques</li> </ul> | B  |

|       |   |    |
|-------|---|----|
| 2.3   | Small Unit Tactics (Dismounted)   |    |
| 2.3.1 | Squad team movement techniques <ul style="list-style-type: none"> <li>• Moving within a team</li> </ul>   | 2b |
| 2.3.2 | Larger Unit movement techniques and formations <ul style="list-style-type: none"> <li>• Knowledge of individual to squad size to team size</li> <li>• Knowledge of all tactical formations for movement based on terrain and threat</li> </ul>  | B  |
| 2.3.3 | Cross danger areas <ul style="list-style-type: none"> <li>• Road, open area, borders, perimeters, villages</li> </ul>   | 2b |
| 2.3.4 | React to fires (IADs with simulation) <ul style="list-style-type: none"> <li>• Include react to attack by aircraft (fixed and rotary wing)</li> <li>• React to flares</li> <li>• React to enemy contact</li> <li>• Break contact with enemy</li> <li>• Consolidation and reorganization procedures</li> <li>• React to a far ambush</li> <li>• React to a near ambush</li> <li>• Hasty fighting positions</li> </ul>    | 2b |
| 2.3.5 | Hasty field fortifications  | 2b |
| 2.4   | Tactical Overland Movement Patrolling   |    |
|       | REFERENCE: Army STP-21-1-SMCT, <i>Soldier's Manual of Common Tasks</i> .  |    |
| 2.4.1 | Squad responsibilities <ul style="list-style-type: none"> <li>• Individual responsibilities point rear security lateral coverage areas</li> <li>• Knowledge and practical application of all team/squad positions</li> </ul>  | 2b |
| 2.4.2 | Departure and reentry of friendly lines <ul style="list-style-type: none"> <li>• Comm out . . . passwords, choke points, near and far recognition</li> <li>• Use of entry Control Points (on scene or at objective)</li> </ul>  | 2b |
| 2.4.3 | Conduct rally points <ul style="list-style-type: none"> <li>• How to select, en route vs. expedient</li> <li>• Knowledge and application of initial rally points and en route rally points; how designated and why</li> <li>• Selection/clearance of designated safe areas/rally points</li> </ul>  | 2b |
| 2.4.4 | Use camouflage, cover and concealment <ul style="list-style-type: none"> <li>• Applies to personnel and equipment</li> <li>• Types of cover</li> <li>• Fixed</li> <li>• Moving</li> <li>• Types of concealment—natural/man-made and its use</li> <li>• Types of camouflage considerations of outlines, shine, shape, colors, dispersion</li> <li>• How to camouflage fighting positions, covering your trail</li> </ul> | 2b |
| 2.4.5 | Move using noise, litter, and light discipline  | 2b |
| 2.5   | Bivouac   |    |
| 2.5.1 | Personal hygiene <ul style="list-style-type: none"> <li>• Personal hygiene . . . care of mouth and teeth, care of feet, nutrition considerations (food and dehydration), water purification, rest, exercise, mental hygiene</li> </ul>  | 2b |
| 2.5.2 | Priorities of work (Field sanitation)   | 2b |

|       |  |     |
|-------|--|-----|
| 2.6   | Mounted Movement Operations—Teach in classroom environment and have practical application drills incorporated into normal drives out to the range for training or on base. | (B) |
| 2.6.1 | Conduct 8 battle drills  |     |
|       | 1. Avoid contact/ambush/IED/RPG  | B   |
|       | 2. React to contact (visual, IED, direct fire [includes RPG])  | B   |
|       | 3. React to ambush (blocked and unblocked)   | B   |
|       | 4. React to indirect fire  | B   |
|       | 5. Break contact   | B   |
|       | 6. Dismount a vehicle  | 2b  |
|       | 7. Evacuate injured personnel from vehicle and equipment   | 2b  |
|       | 8. Secure at a halt  | 2b  |
|       | NOTE: Teach in classroom environment (B) and have practical application drills incorporated into normal drives out to the range for training.                              |     |
| 2.7   | Urban environment operations   |     |
| 2.7.1 | Principles of dismounted movement techniques during urban operation  | B   |
| 2.7.2 | Principles of mounted movement techniques during urban operations  | B   |
| 2.7.3 | Enter a building during an urban operation   | 2b  |
|       | • Select hasty firing positions during an urban op   | 2b  |
|       | • How to move around a corner  | 2b  |
|       | • Moving past a window (high/basement)   | 2b  |
|       | • Moving parallel to a building  | 2b  |
|       | • How to cross open areas  | 2b  |
|       | • How to cross a wall  | B   |
|       | • How to move in a building  | B   |

|     | <ul style="list-style-type: none"> <li>• Covert and overt, day and night</li> </ul>   |    |
| 7.4 | Call for fire formats (5 line)  | B  |
|     | <ul style="list-style-type: none"> <li>• Use "J-Fires" handbook as reference</li> </ul>   |    |

## Development of CBAT Model Courses

---

We developed three potential course models that satisfied the CBAT task- and proficiency-level requirements. These models were derived from the SF, CCT, and PJ skill level 3 training requirements, as indicated in each career field's CFETP and POI. The purpose of this analysis was to determine the feasibility of providing the specified CBAT course within the 25-day duration and to better understand the course requirements that would minimize training proficiency deferrals for particular specialties that routinely operate in tier-1 and tier-2 environments. We constructed a fourth, minimum-duration, model, in which the CBAT course requirement for each task is satisfied using the training standard of the specialty that provides the fewest training hours. For the most part, these requirements are satisfied using specifications from the SF training materials.<sup>1</sup>

SF training standards vary by task but generally match those specified in the CBAT course outline. All CCT and PJ training assumes a 3c proficiency standard (requiring that trainees perform tasks without assistance and meet or exceed standards of accuracy, timeliness, and use of correct procedures) and, therefore, generally exceeds the CBAT standard.<sup>2</sup>

---

<sup>1</sup> Throughout this analysis, we assumed that existing Air Force specialties currently provide training that satisfies some or all of the CBAT requirements and that reference to combat training provided by other services (such as the Army Infantry School) is unnecessary. This does not imply, however, that the AFSCs from which we derived the models exhaust the range of ground combat training currently provided to Air Force personnel. For example, although the TACP specialty provides training in combat skills, discrepancies between the CFETP and POI prevented us from using TACP as the basis for an additional AFSC model. Moreover, as of this writing, we did not have the full curricula for predeployment courses, such as BC3. The BC3 training materials are continually evolving, but they could provide further insights into the conditions, standards, and duration of training for specific tasks, such as mounted operations, and will be reviewed as they become available.

<sup>2</sup> *Proficiency standards* consider task performance, task knowledge, and subject knowledge appropriate to particular skill levels. *Task performance* is evaluated on a four-point numeric scale, where 1 indicates an extremely limited ability to perform a task (e.g., can do simple parts of a task with extensive supervision and direction) and 4 indicates high proficiency (e.g., can perform a task quickly and accurately, and can train others to perform the task). *Task* and *subject* knowledge are evaluated on a four-item alphabetical scale, where a (or A) requires an individual to identify the nomenclature of task equipment or basic facts of a subject and where d (or D) requires an advanced theoretical or analytical knowledge of a task or subject. CBAT tasks that specify a 2b proficiency level require that an individual can do most parts of the task, needs help only on the hardest parts, and can determine the step-by-step procedures for performing a task. Those with a 3c level require that an individual can do all parts of a task and needs only a spot check of completed work. Proficiency in all CBAT subject areas requires a B level, which specifies that an individual can identify the relationship of basic facts and state general principles about the subject.

The SF training guidelines provide the hours and standards for just over half the tasks in the minimum-duration model. For many of the others, the SF proficiency standard fell short of the CBAT standard, so the CCT or PJ training materials were used. In other cases, the SF standard was appropriate, but the CCT or PJ curricula satisfied the training requirements in fewer hours. For example, the SF and CCT POIs specify five hours of squad movement and the PJ POI specifies only four hours for similar training. Thus, the minimum-duration CBAT model used the PJ training specification for squad movement. On the other hand, SF students receive two hours of instruction in crossing danger areas, compared to five hours for CCT and PJ. The minimum-duration model incorporates the SF specification for training in crossing danger areas.

Some CBAT tasks are not specified in the SF, CCT, and PJ training guidelines. For these tasks, we substituted an alternative training standard from the AFSC with the fewest instructional hours. For example, the CCT CFETP and POI do not specify a standard for noise, light, and litter discipline. However, the training provided to both SF and PJ candidates meets or exceeds the required CBAT proficiency level for this task. Therefore, the model based on the CCT POI uses the SF standard of one hour instead of the seven-hour PJ standard.

For the majority of tasks and subjects, all the course models satisfied the CBAT proficiency-level requirements or, in the cases of the PJ and CCT models, greatly exceeded them. Nonetheless, for three tasks—signing weapons in or out, large unit movements, hasty field fortifications—no training standard could be identified. For five other tasks, the proficiency standard that could be identified in the existing course curricula fell short of the CBAT requirements. Two of these tasks require hands-on performance (pistol maintenance and field sanitation), and the other three require subject knowledge only (M-4 and M-9 weapon familiarization, and joint and sister-service organizational designations). However, because all these tasks are basic to other training areas or can be easily incorporated into them, adapting these into the CBAT curriculum at the specified proficiency levels should not significantly lengthen the course duration.

## Comparison of CBAT Estimation Models

Table B.1 shows the learning standard and training hours for the final minimum-duration model. Table B.2 summarizes the length of the CBAT course for each of the analytical models. Table B.3 compares how each model allocates training time for the major instructional areas.

### Model 1: Security Forces

Model 1 was developed using information primarily from the SF training guidelines. The estimated course length is 29 eight-hour instructional days. Reducing the SF weapon safety training hours (and accepting deferred proficiency in this task) would allow 35 hours to be cut from

the course or recovered for other training purposes. The estimated training days in model 1 could therefore be reduced from 29 to the CBAT goal of 25.<sup>3</sup>

### **Model 2: Combat Control**

Model 2 was developed using information primarily from the CCT training guidelines. The estimated course length is 38 eight-hour instructional days. With the exception of night navigation, most of the course length increase over that observed in model 1 occurred in small per-task increments. It should be recalled, however, that all CCT training (like all PJ training) is geared toward ensuring that students can perform tasks at a 3c proficiency level, whereas most CBAT tasks require only a 2b or B level. The training hours for some tasks may therefore exceed what is necessary for students to meet the CBAT standard (provided that students from different specialties are generally capable of learning at the same rate as CCT candidates, which, as discussed in Chapter Two, may or may not be a valid assumption).

In the absence of CCT standards, the task standards for individual movement techniques; noise, litter, and light discipline; mounted movement operations; MOUT; hand-to-hand combat; and visual signaling techniques were adopted from the SF guidelines. The task standards for conducting rally points and receiving warning orders came from the PJ guidelines. The estimate of navigation training hours included 16 hours provided in the CCT orientation course; rifle qualification hours included eight hours provided in the orientation course.

Some of the training enhancements for SF trainees were the inverse of what was described in Chapter Two and in model 1 (e.g., weapons and navigation), although the weapon training under diverse conditions would come at the expense of safety and storage training. Total hands-on weapon training under model 2 was only 32 hours, compared to 68.25 hours under model 1. SF trainees would also receive additional training time in the practical application of camouflage, cover, and concealment techniques and in field hygiene. PJ trainees would receive an additional 15 hours of navigation training but 54 percent fewer hours of weapon handling. They would also receive fewer hours of training in noise, litter, and light discipline (this would also occur under model 1).

### **Model 3: Pararescue**

Model 3 was developed using information primarily from the PJ training guidelines. The estimated course length was 37 eight-hour instructional days.

In the absence of PJ standards, the task standards for individual movement techniques, personal hygiene, field sanitation, mounted movement operations, MOUT, hand-to-hand combat, and visual signaling techniques were adopted from the SF guidelines. Considering the extensive medical training currently provided to PJ trainees, model 3 adopted lower levels of training in first aid and SABC and in the transportation and evacuation of casualties than do the CCT guidelines.

The training enhancements for SF trainees were generally the same as those under model 2. SF trainees would also receive additional training hours in the use of hand and arm

---

<sup>3</sup> Because the minimum-duration model described in Chapter Two was heavily based on SF training standards, the estimated enhancements and deferrals are generally the same as those in the SF model and will not be repeated here.

signals and in movement under noise, litter, and light discipline. CCT trainees would receive a significant increase in weapon handling and proficiency training, from 32 hours currently to 70 hours. Like SF trainees, they would also receive additional time on hand and arm signals and movement under noise, litter, and light discipline. On the other hand, there were 18.5 fewer hours of navigation than is offered in PJ IST.

**Table B.1**  
**Learning Standard and Training Hours Utilized in the Minimum-Duration Model**

| Courses and Their Elements |   | CBAT Proficiency Standard | Hours | Source of Hours | Proficiency Standard in Source |
|----------------------------|---|---------------------------|-------|-----------------|--------------------------------|
| 1.                         | Weapons   |                           |       |                 |                                |
| 1.1.                       | Weapon procedures                                     |                           |       |                 |                                |
| 1.1.1.                     | Weapon safety   | 3c                        | 2     | CCT             | 3c                             |
| 1.1.2.                     | Weapon security                                       | 3c                        | 3     | PJ              | 3c                             |
| 1.1.3.                     | Sign out and turn in weapons                          | 3c                        |       |                 |                                |

## RAND Schoolhouse Model Data Inputs and Outputs

---

The RAND Schoolhouse Model uses a number of inputs to simulate a technical training schoolhouse. The two major inputs are the POI and the course resource estimate. Table C.1 is the POI we used to estimate the required resources.

Table C.2 is the initial course resource estimate, and its values represent an initial starting point, since not all the items were actually used in the course of the simulation. This table was derived from an Air Force Form 120, used as the input to our simulation. Form columns that would have remained blank here because we worked from kits, rather than individual items, have been eliminated for the sake of simplicity, as has header information identifying a specific training session.

Table C.2 indicates the actual resources used in the simulation. Finally, Table C.3 groups training devices into kits to simplify the analysis.

APPENDIX D

## **CBAT Companion–Related Excerpts from the Air Force Lessons Learned Database**

---

**Table D.1**  
**Air Force Lessons Learned Database Search Results**

| Type                 | Comment   | Event <sup>a</sup>              | Location                                     | Record No.  | Search Term |
|----------------------|---|---------------------------------|--|-------------|-------------|
| Civilian interaction | Need to learn civilian Air Traffic Control procedures in Afghanistan. Lack of understanding/agreement caused problems   | AEF<br>9/10-06                  | Afghanistan                                  | 01527-73898 | Combat      |
| Civilian interaction | Problems interacting with contracted weather observers at Diego Garcia (Filipino and Chagossian). Particular difficulties coordinating severe weather watches and warnings for both the Air Force and the Navy  | AEF<br>9/10-06                  | Diego Garcia                                 | 01314-56251 | Combat      |
| Civilian interaction | Mission was to close the base in Pakistan, which required dealing with dozens of contractors—but we did not have an interpreter assigned to provide interface   | AEF<br>1/2-04                   | Jacobabad, Pakistan                          | 01399-71403 | Combat      |
| Civilian interaction | Many projects delayed due to lack of TCN escorts being available to monitor work and deliveries   | AEF<br>7/8-05                   | Ali Al Salem, Al Jaber, Arifjan, Kuwait City | 01153-67916 | TCN         |
| Civilian interaction | Lack of communication problematic for TCN escort support (no means to communicate mishaps to the command post)  | AEF<br>5/6-05                   | UAE  | 01495-45335 | TCN         |
| Civilian interaction | ATC “working group” with Kuwaitis was beneficial, but required due diligence spent on building relationships  | AEF<br>3/4-05                   | Kuwait                                       | 01230-68615 | Conflict    |
| Civilian interaction | Delicacy of dealing with host-nation partners. Challenge each rotation to build a good working relationship that allows for efficient coordination on major projects  | AEF<br>7/8-05                   | UAE [Al Dhafra AB]                           | 01171-20447 | Security    |
| Civilian interaction | Host-nation relations are improving, but without a Status of Forces Agreement, US personnel are at the mercy of changing host-nation rules. Business is more times than not conducted via personal relations with the host nation, and this can be sometimes tenuous. | AEF<br>7/8-05                   | UAE  | 01810-43876 | Security    |
| Civilian interaction | Turkish nationals are used for janitorial task in buildings where OPSEC sensitive/classified material work takes place. Squadron personnel have on multiple occasions observed suspicious behavior, but the hiring practice is mandated by host nation                | AEF<br>01-04 ONW<br>Incirlik TU | Incirlik AB, Turkey                          | 02225-98503 | Security    |
| Civilian interaction | Unattended delivery vehicles parked for unreasonably long periods in the parking lot behind AAFES. Possible security threat   | AEF<br>01-02 ONW<br>Incirlik TU | Incirlik AB, Turkey                          | 02240-15238 | Security    |

**Table D.1—Continued**

| Type              | Comment  | Event <sup>a</sup>          | Location           | Record No.  | Search Term |
|-------------------|--|-----------------------------|--------------------|-------------|-------------|
| Combat incident   | Insurgent probe at the east Entry Control Point  | AEF<br>5/6-05               | Balad AB           | 01379-73327 | Combat      |
| Combat incident   | Concern: The amount of time that combat patrols have to sit immobile securing an IED cordon while waiting on EOD to arrive. The security element for the EOD team is not dedicated, and teams can wait up to 30 minutes. | Joint IED<br>AAR<br>June 05 | Iraq?              | 01861-35660 | Combat      |
| Combat incident   | Locating insurgent weapons caches  | AEF<br>5/6-05               | Iraq [Balad AB]    | 01379-73327 | Mortar      |
| Combat incident   | AF Sniper team insertions  | AEF 7/8-05                  | Iraq [KARB]        | 01857-66225 | Convoy      |
| Combat incident   | Poorly set up to respond to off-base mishaps, particularly in the area of navigation. [Recent acquisition of GPS, trying to set up accounts to acquire maps.]  | AEF<br>5/6-05               | UAE [Al Dhafra AB] | 01218-48404 | Security    |
| Joint Interaction | Different definitions of "Base Support" for Army and Air Force. (RFF documents are vague and do not adequately describe duties/expectations for the law and order mission)   | AEF<br>7/8-05               | Iraq               | 01838-97133 | Combat      |
| Joint interaction | Lack of joint communications capability in the Area of Responsibility (AOR).<br>No voice communication possible between KARB and personnel at forward operating bases (FOB).   | AEF<br>7/8-05               | Iraq (KARB)        | 01857-66225 | Combat      |
| Joint interaction | AF communication equipment that is different from Army equipment does not facilitate adequate communication between AF and Army units. [Suggests technology called "Blue Force Tracker"]                                 | Joint IED<br>AAR<br>June 05 | Iraq               | 01854-95323 | Combat      |
| Joint interaction | Lack of familiarity with Multiband Inter/Intra Team Radio system (Army system). Difficult for Army/AF EOD communication  | AEF<br>3/4-05               | ?                  | 01555-62524 | Combat      |
| Joint interaction | Confusion over (overuse of) the term "troops in contact."<br>Inability of C2 and CAS units to properly respond to multiple situations when everything is TIC. (For example, indirect rocket/mortar attacks are not TIC)  | AEF<br>1/2-04               | ?                  | 01533-73520 | Combat      |
| Joint interaction | Dual chain of command (Navy/PACOM versus USAF/CENTCOM) at Diego Garcia creates confusion and duplication of effort   | AEF<br>9/10-04              | Diego Garcia       | 01831-50233 | Conflict    |

Table D.1—Continued

| Type                | Comment  | Event <sup>a</sup>          | Location                 | Record No.  | Search Term       |
|---------------------|--|-----------------------------|--------------------------|-------------|-------------------|
| Joint interaction   | Poor coordination between AF/Army/KBR for preventative health measures   | AEF<br>3/4-05               |                          | 01949-83672 | Joint interaction |
| Joint Interaction   | Limited coordination with Army agencies in traumatic event response procedures   | AEF<br>7/8-05               |                          | 01411-21375 | Health            |
| Mission uncertainty | SF personnel tasked to execute missions outside the written requirements. Examples: offensive combat patrols, long range convoy patrols  | AEF<br>7/8-05               | Iraq                     | 01376-81194 | Combat            |
| Training deficiency | Weapons qualification, LOAC, CWDT, SABC  | AEF<br>7/8-05               | Iraq                     | 01563-70164 | Combat            |
| Training deficiency | Train and certify every member of Gun Track to assume/perform in any crew positions. For example: Drive M915s and commercial tractor trailers to remove vehicle from kill zone in case of driver incapacitation  | AEF<br>7/8-05               | Iraq                     | 01461-38793 | Combat            |
| Training deficiency | Training provided did not train personnel deploying for ILO (in-lieu-of) and convoy missions adequately to ensure safety and adequate job knowledge upon arrival. Missing training in Army Supply Database, (UCCS-G), MTS, SINGGARS, NVY and Warlock   | AEF<br>7/8-05               | Iraq                     | 01823-91866 | Combat            |
| Training deficiency | Recommend the utilization of convoy personnel returning from AOR in developing an updated comprehensive curriculum that reflects tactics, techniques and procedures (TTP) learned in the AOR including training on escalation of force procedures  | AEF<br>7/8-05               | Iraq                     | 01461-38793 | Combat            |
| Training deficiency | The majority of the non-SF base personnel deployed to Bagram with out zeroing their rifle or having fired it in the 12 months prior to deployment  | AEF<br>5/6-05               | Bagram Airfield          | 01203-41670 | Combat            |
| Training deficiency | Current and emerging MNC-I TTPs that affect combat forces are published in real time and are available on the SIPR network. Most AF personnel, specifically EOD/SF are unaware of this info and where to obtain it.  | Joint IED<br>AAR<br>June 05 | Al Udeid?                | 01494-85122 | Combat            |
| Training deficiency | Teach proper wear of personal protective equipment, proper response to base attack, build core skills in convoy operations, teach immediate action skills, defensive driving, high speed driving. Also Increase weapons handling/familiarization/proficiency for all personnel (muzzle discipline, target acquisition, cleaning/maintenance, etc.) | AEF<br>3/4-05               | ?                        | 01194-10655 | Combat            |
| Training deficiency | Unit support personnel are often required to drive off base for a multitude of reasons. Although usually qualified in weapon, should be more than marginally qualified in both M-16 and M-9  | AEF<br>1/2-04               | Kuwait [Ali Al Salem AB] | 01403-75957 | Combat            |

**Table D.1—Continued**

| Type                | Comment  | Event <sup>a</sup>       | Location | Record No.  | Search Term |
|---------------------|--|--------------------------|----------|-------------|-------------|
| Training deficiency | Junior NCOs who are relied upon to perform dangerous missions outside the wire had no idea about good/successful "Blue TTPs." Knowledge of "Red TTPs" was limited to what they have learned on their own and under fire  | Joint IED AAR<br>June 05 | ?        | 01494-85122 | IED         |
| Training deficiency | Several individuals deployed to our OSS location lacked the required knowledge/training to effectively operate in an international environment. Base Ops personnel did not have proper training in International Civil Aviation Organization (ICAO) procedures or CENTCOM/joint procedures | AEF<br>7/8-05            | ?        | 01352-20748 | Conflict    |
| Training deficiency | Improve CST for Civil Engineering Expeditionary Combat Airmen. More training on: Work party security, basic class on Army logistics, SERE training for all   | AEF<br>3/4-05            | ?        | 01810-90337 | Convoy      |

<sup>a</sup> The Air Force divides its forces into ten AEFs, numbered 1 through 10. At any one time, two of these are available for deployment, with the others in various stages of reorganization. In this column, the first two numbers after "AEF" are the numbers of the deployed AEFs; the last two-digit number is the year in which they were deployed.

## CBAT Companion Survey Items

| Question  | Iraq |    | Afghanistan |    | Kuwait |    |
|---|------|----|-------------|----|--------|----|
|   | Yes  | No | Yes         | No | Yes    | No |
| How often did you encounter the following event while deployed?   |      |    |             |    |        |    |
| Heard but did not see close mortar fire from the enemy  | 55   | 8  | 7           | 6  | 13     | 23 |
| Heard but did not see scattered rifle fire from the enemy   | 45   | 18 | 6           | 7  | 10     | 26 |
| Saw close mortar fire from the enemy  | 36   | 27 | 5           | 8  | 6      | 30 |
| Accidental injury, not war related  | 33   | 31 | 4           | 9  | 17     | 19 |
| UXOs  | 29   | 35 | 6           | 6  | 7      | 29 |
| People carrying assault weapons   | 28   | 35 | 5           | 8  | 11     | 24 |
| RPG fire  | 19   | 45 | 3           | 10 | 6      | 30 |
| Saw scattered rifle fire from the enemy   | 18   | 45 | 3           | 10 | 4      | 32 |
| People attempting to gather intelligence on the AF  | 17   | 46 | 1           | 12 | 7      | 29 |
| Long waits to get back in the secured area at the base entrance   | 10   | 54 | 4           | 9  | 16     | 20 |
| IEDs  | 10   | 53 | 2           | 11 | 1      | 35 |
| Snipers   | 6    | 58 | 0           | 13 | 3      | 33 |
| Suicide bombers   | 5    | 59 | 0           | 13 | 1      | 35 |
| Snipers shooting at lines at the base entrance  | 2    | 62 | 0           | 13 | 2      | 34 |
| Being abducted or captured  | 0    | 63 | 0           | 13 | 0      | 36 |
| When you were deployed, did you ever work with people from the Army, Navy, Marines or British military?   | 25   | 3  | 8           | 0  | 22     | 8  |
| Have you ever been injured while deployed?  | 8    | 23 | 1           | 8  | 4      | 27 |
| When you worked with the Army, Navy, Marines, or British forces, did they use procedures, policies, techniques for handling situations, types of equipment, or types of machinery that were different from what you learned in the Air Force? | 19   | 6  | 6           | 2  | 14     | 8  |
| During your deployment experience in the last five years, did you ever go "outside the wire" (OTW) [outside the exterior perimeter of a secure base]?   | 31   | 33 | 9           | 4  | 31     | 5  |
| Did you carry a weapon while you were OTW?  | 20   | 8  | 7           | 1  | 20     | 10 |
| When you were OTW, did you ever need to fire your weapon to protect your safety or the safety of others?  | 1    | 18 | 0           | 7  | 0      | 19 |
| Did you ever go OTW to go to another secure military base?  | 17   | 13 | 6           | 3  | 27     | 4  |

Table E.3—Continued

| Question  | Iraq |    | Afghanistan |    | Kuwait |    |
|---|------|----|-------------|----|--------|----|
|   | Yes  | No | Yes         | No | Yes    | No |
| When you were traveling OTW, did you ever see any of the following?   |      |    |             |    |        |    |
| Huts by the side of the road  | 20   | 11 | 5           | 4  | 16     | 15 |
| Burned out vehicles   | 15   | 15 | 5           | 4  | 18     | 13 |
| Dead animals  | 11   | 20 | 5           | 4  | 14     | 17 |
| Dead bodies   | 4    | 26 | 0           | 9  | 3      | 28 |
| Signs of mines  | 8    | 23 | 6           | 3  | 4      | 27 |
| How often did you experience the following while you were OTW?  |      |    |             |    |        |    |
| Checkpoints   | 15   | 15 | 4           | 5  | 15     | 16 |
| Giving toys/candy to kids in neighborhoods  | 10   | 20 | 3           | 6  | 3      | 28 |
| Seeing fist fights  | 9    | 21 | 3           | 6  | 3      | 28 |
| Being frightened, surprised, or startled by something a local or TCN did  | 6    | 24 | 1           | 8  | 6      | 25 |
| Getting lost  | 2    | 28 | 0           | 9  | 7      | 24 |
| Getting in an automobile accident   | 2    | 27 | 0           | 9  | 1      | 30 |
| Being restrained by a local or TCN  | 0    | 30 | 0           | 9  | 1      | 30 |
| Having your vehicle rammed  | 0    | 30 | 0           | 9  | 1      | 30 |
| Being involved in a riot  | 0    | 30 | 0           | 9  | 0      | 31 |
| Being involved in a fist fight  | 0    | 30 | 0           | 9  | 0      | 31 |
| Being put in local jail   | 0    | 30 | 0           | 9  | 0      | 31 |
| Being uncertain that your driver was going the correct way  | 4    | 26 | 3           | 6  | 8      | 23 |
| Having to restrain a local or TCN   | 4    | 26 | 1           | 8  | 0      | 31 |
| Seeing riots  | 3    | 27 | 2           | 7  | 2      | 29 |
| How often did you encounter the following while you were OTW?   |      |    |             |    |        |    |
| Meeting locals  | 14   | 16 | 6           | 2  | 13     | 17 |
| Inability to communicate because of language barriers   | 11   | 19 | 5           | 3  | 9      | 21 |
| Other cultural differences that made you uncomfortable  | 6    | 24 | 3           | 5  | 4      | 26 |
| An American reacting negatively in public to cultural differences (such as men holding hands or kissing, poor personal hygiene, etc.) | 5    | 25 | 2           | 6  | 4      | 26 |
| Interaction with the religious police   | 2    | 28 | 1           | 7  | 0      | 30 |
| How often did you witness locals or TCNs doing the following while you were OTW?  |      |    |             |    |        |    |
| Watching you from the street  | 14   | 16 | 5           | 3  | 11     | 19 |
| Watching you from buildings on the ground floor   | 10   | 20 | 2           | 6  | 5      | 25 |

Table E.3—Continued

| Question   | Iraq |    | Afghanistan |    | Kuwait |    |
|--|------|----|-------------|----|--------|----|
|  | Yes  | No | Yes         | No | Yes    | No |
| Watching you from the top of buildings   | 9    | 21 | 1           | 7  | 3      | 27 |
| Watching you from buildings above the ground floor   | 7    | 23 | 1           | 7  | 4      | 26 |
| Approaching your vehicle at a stop light   | 4    | 26 | 0           | 8  | 4      | 26 |
| Have you ever traveled in a convoy?  | 14   | 16 | 4           | 5  | 14     | 16 |
| When you were OTW, did you ever encounter the local police?  | 12   | 16 | 2           | 6  | 9      | 20 |
| When you went OTW, were you ever approached by people who were:  |      |    |             |    |        |    |
| Expressing thanks  | 10   | 17 | 3           | 5  | 6      | 23 |
| Just making conversation (friendly exchange of information)  | 10   | 17 | 3           | 5  | 5      | 24 |
| Carrying a gun   | 7    | 19 | 1           | 7  | 1      | 27 |
| Carrying another type of weapon  | 5    | 22 | 1           | 7  | 1      | 26 |
| Angry  | 6    | 21 | 2           | 6  | 2      | 27 |
| Their intent was unclear (possibly a bomb)   | 3    | 24 | 1           | 7  | 1      | 28 |
| Gathering intelligence on the US Military  | 3    | 24 | 1           | 7  | 1      | 28 |
| Carrying a bomb  | 1    | 26 | 0           | 8  | 0      | 29 |
| Trying to surrender  | 0    | 27 | 0           | 8  | 0      | 29 |
| When you were OTW, how often were you approached by the following types of locals or TCNs when you were on foot? |      |    |             |    |        |    |
| Men only   | 9    | 19 | 2           | 6  | 4      | 27 |
| A vehicle  | 8    | 20 | 3           | 5  | 4      | 27 |
| One person   | 8    | 20 | 1           | 7  | 5      | 26 |
| Children alone   | 7    | 21 | 2           | 6  | 3      | 28 |
| Children panhandling   | 5    | 23 | 1           | 7  | 4      | 27 |
| Children in the presence of adults   | 4    | 24 | 1           | 7  | 3      | 28 |
| Men and women in a group   | 4    | 24 | 0           | 8  | 2      | 29 |
| Women only   | 3    | 25 | 0           | 8  | 3      | 28 |
| Police   | 6    | 22 | 1           | 7  | 4      | 27 |
| How often did you witness locals or TCNs doing the following while you were OTW?                                 |      |    |             |    |        |    |
| Taking pictures of you   | 2    | 28 | 1           | 7  | 4      | 26 |
| Sexually harassing American military women   | 2    | 26 | 1           | 7  | 1      | 29 |
| Being violent toward local or TCN women  | 2    | 26 | 1           | 7  | 1      | 30 |
| Being violent toward children  | 2    | 26 | 1           | 7  | 1      | 30 |
| Following you  | 2    | 26 | 0           | 8  | 2      | 29 |
| Being violent toward animals   | 1    | 27 | 1           | 7  | 1      | 30 |

## **CBAT Companion List of Incidents and SME Categorizations**

---

The process that produced these tables was described in Chapter Four, in the discussion of stage 4. Note that the language here has been left largely as originally recorded. We have made a few adjustments (such as capitalization and minor corrections of punctuation) for the sake of the layout. Other amendments, summaries, or deletions are indicated by brackets and ellipses, as appropriate.

**Table F.1**  
**Categorization of Incidents (SMEs 1, 2, 3, and 4)**

| Question/Topic   | Response  | SME 1                         | SME 2  | SME 3   | SME 4                      |
|--|---|-------------------------------|--|---|----------------------------|
| What made you feel as if you were in danger?                     | Riding in a convoy at 0300. The convoy approaches a truck that is broken down on the side of the road but facing the opposite direction from the flow of traffic. There is a local that looks like he is changing a tire, yet you notice that none of the tires are flat.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops  | Combat procedures training |
| Has there been a situation where your equipment is useless?      | People are carrying around gear that they don't know how to use. (Well, they get training every year, but in the field, they wouldn't know how to prioritize it.) Smoke appears in the air, and people are worried about putting on the chem. pants. People don't know how to respond. They go outside and watch flares.  | Equipment issues              | Refresher training<br>Combat skills (group)                                    |   | FOB procedures             |
| What made you feel as if you were in danger?                     | We had IED scares, mortar attacks at night, tracer fire. At night we'd use NVGs. Balad got shelled more than we did. Balad got shelled about every 3–4 hours.   |                               | Combat skills (group)<br>Combat exercise training (war games)                  |   | FOB procedures             |
| What additional training do you feel would be beneficial?        | Training on Army equipment.   | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games)                  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Weapons training           |
| Describe a time when you worked in a joint military environment. | Equipment wasn't hard to follow, but communication/ lingo was harder to keep up with. We were supposed to go to San Antonio for a month for familiarization, but the AF decided that we didn't need it. We learned how to use new weapons (grenade launchers, etc.) when the Army "showed us"—not an official course.   | Equipment issues              | Combat skills (group)<br>Combat exercise training (war games)                  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Weapons training           |
| What did you learn while OTW?                                    | We need more weapons and a larger selection of weapons. M-16s are bad choices for weapons because the body armor moves the sight picture too much. M-4s are better because the adjustable stock means you can keep your same sight picture. A 7.62-caliber weapon would be nice for us to choose from. Given the choice I would have carried a larger-caliber weapon than the M-4 I was issued. | Equipment issues              | Combat skills (group)<br>Combat exercise training (war games)                  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Weapons training           |

**Table F.1—Continued**

| Question/Topic  | Response   | SME 1                         | SME 2  | SME 3  | SME 4            |
|---|--|-------------------------------|--|--|------------------|
| What did you learn after you were deployed, but before going OTW? | Proper handling of your weapon.  | Equipment issues              | Refresher training<br>Combat skills (group)                                    | Individual tactics (personal)<br>Behavior<br>Industrial equipment                              | Weapons training |
| Describe a suspicious situation.                                  | No LMR with her. Most Air Force individuals could report suspicious activity to a supervisor. Amount of time to get the message up varies. | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | OPSEC<br>Local OPSEC threats   | Weapons training |
| What additional training do you feel would be beneficial?         | Close target, far target.  | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games)                  | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Weapons training |
| What did you experience OTW?                                      | Carrying a weapon OTW.   | Equipment issues              | Combat skills (group)<br>Combat exercise training (war games)                  | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Weapons training |
| What additional training do you feel would be beneficial?         | Moving target range.   | Equipment issues              | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Weapons training |

**Table F.1—Continued**

| Question/Topic   | Response   | SME 1                         | SME 2  | SME 3              | SME 4            |
|--|--|-------------------------------|--|--------------------|------------------|
| Have you ever had to deal with inexperience or lack of training? | I was part of a large team that got on a bus. E-2 for the army, gun on his lap, doesn't have a magazine in his weapon. Never changed his weapon. Bad guys kill people on the road we're about to travel on every day. Dealing with inexperience. Had to get everyone off the bus, put on body armor, get weapons out. But still no one understood what was going on. They just didn't realize what I was thinking in terms of the level of threat. | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Weapons training |
| What did you experience OTW?                                     | Restraining a local/TCN.   | Local customs                 | Subcategory: cultural, situational   | Local ROEs         | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | TCNs providing food services.  | Additional necessary training | Cultural, situational awareness  | Working with TCNs  | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | This happened all the time too. They would oftentimes make passes at the males. Sometimes they would to women too, or try to grab them. We would usually contact their boss TCN and our alpha leader to make a site visit and they would correct the situation.  | Local customs                 | Cultural, situational awareness  | Working with TCNs  | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | Working as TCN escort in Kuwait, TCNs stopped working at midday to pray, and I was unaware of their religious practices.   | Local customs                 | Cultural situational awareness   | Working with TCNs  | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | In Iraq, working as TCN escort, was talking with TCN about coming on base and found myself surrounded by about 6 other individuals.  | Situational awareness         | Cultural situational awareness   | Working with TCNs  | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | Had one walk up with a knife and I drew my M-16. He dropped the knife.   | Situational awareness         | Cultural situational awareness   | Working with TCNs  | TCN duties       |
| Have you had interactions with TCNs? If so, describe.            | We didn't move with anyone who wasn't a TCN. Least training that you would expect was an SF person to accompany us.  | Situational awareness         | Cultural situational awareness   | Working with TCNs  | TCN duties       |

**Table F.1—Continued**

| Question/Topic   | Response  | SME 1                         | SME 2  | SME 3   | SME 4              |
|--|---|-------------------------------|--|---|--------------------|
| What happened while interacting with locals?                     | Cargo handlers, airborne personnel. Refuel planes. By the time I've interacted with them, they've refueled 1,000 planes. Not really fluent in English. Interact a little bit. | Local customs                 | Language training, basic<br>Subcategory: cultural, situational awareness | Working with TCNs   | TCN duties         |
| Have you had interactions with TCNs? If so, describe.            | TCNs talk in their native language a lot to each other. It does make American personnel uncomfortable.  | Local customs                 | Language training, basic<br>Subcategory: cultural, situational awareness | Working with TCNs   | TCN duties         |
| What did you experience OTW?                                     | Being frightened/surprised by something a TCN did.  | Additional necessary training | Restraining a hostile native/suspect                                     | Working with TCNs   | TCN duties         |
| Have you had interactions with TCNs? If so, describe.            | A TCN came at me with a screwdriver.  | Situational awareness         | Subcategory: cultural, situational                                       | Working with TCNs   | TCN duties         |
| What additional training do you feel would be beneficial?        | Army training.  | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games)            | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Small unit tactics |
| Have you ever had to deal with inexperience or lack of training? | If something happens, I'd tell everyone what I was going to do. I'd take control—even if it wasn't the right thing to do.   | Situational awareness         | Cultural situational awareness   | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Small unit tactics |
| Have you ever had to deal with inexperience or lack of training? | Most don't know how to respond if they got hit in the face.   | Additional necessary training | Non-training related   | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Small unit tactics |

Table F.1—Continued

| Question/Topic   | Response   | SME 1                         | SME 2  | SME 3  | SME 4              |
|--|--|-------------------------------|--|--|--------------------|
| What additional training do you feel would be beneficial?  | MOBs (wartime contingency). These guys trained up in weapons and tactics, but skills in primary AFSCs deteriorated. For the most part, this doesn't happen much anymore.   | Situational awareness         | Non-training related   | Individual tactics (personal)<br>Behavior<br>Industrial equipment                              | Small unit tactics |
| What did you experience OTW?                               | Being approached by people who were angry.   | Situational awareness         | Subcategory:<br>Cultural<br>Situational  | Individual tactics (personal)<br>Behavior<br>Industrial equipment                              | Small unit tactics |
| What additional training do you feel would be beneficial?  | Air/land battle operations.  | Additional necessary training | Non-training related   | ROE and local procedures   | Small unit tactics |
| What additional training do you feel would be beneficial?  | What to do when people are approaching you.  | Situational awareness         | Cultural<br>situational awareness  | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Small unit tactics |
| What training have you received for special circumstances? | Small teams tactics training.  | Additional necessary training | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Small unit tactics |
| How do you travel when on foot?                            | Got seven to twelve people. You three to four watch the rooftops. Next three to four watch surroundings. You two watch what's going on in the vehicle. There was a keyword or yelling that would alert for danger. We had rally points, usually under cover. | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | Small unit tactics |

|--|--|-------------------------------|--|------------------------------|-------|
| What happened while interacting with locals?                                   | I don't trust anyone in the AOR. People approach. It's all psyops. It's how you play the game with them. The people are extremely well trained. They speak English. They elicit information. They're trained. People are trained to approach you—the most dangerous ones are the ones who are just trying to build rapport. I'm friendly, extremely cognizant; I'm looking for changes in patterns. Once I've reported something—often those people won't come around again. Sometimes they do—they're just nice people. | Situational awareness         | Cultural situational awareness   | OPSEC<br>Local OPSEC threats | Intel |
| What happened while interacting with locals?                                   | One of the female janitors asked me to give her a military uniform. I reported it, and the next day they turned all of the TCN rooms upside down and found a lot of stuff.   | Situational awareness         | Cultural situational awareness   | OPSEC<br>Local OPSEC threats | Intel |
| Do people watch you or try to get information from you? If so, what do you do? | Tell OSI folks if you think you're being followed.   | Situational awareness         | Cultural situational awareness   | OPSEC<br>Local OPSEC threats | Intel |
| Do people watch you or try to get information from you? If so, what do you do? | Pakistani was training as an air attaché. . . . He was learning how to do evacuations—and switched the conversation to gather intelligence about weapon systems. It was obvious, but it was uncomfortable.   | Situational awareness         | Cultural situational awareness   | OPSEC<br>Local OPSEC threats | Intel |
| What did you experience OTW?   | Local/TCN people attempting to gather intelligence.  | Situational awareness         | Refresher training<br>Combat skills (group)                                    | OPSEC<br>Local OPSEC threats | Intel |
| What additional training do you feel would be beneficial?                      | Mobile force protection training. Anyone going outside the fence. Surveillance techniques. If you're going to be driving in a third-world country, you need that training.   | Additional necessary training | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops           | Intel |

Table F.1—Continued

| Question/Topic   | Response  | SME 1  | SME 2  | SME 3   | SME 4          |
|--|---|--|--|---|----------------|
| Describe a time when you were riding in a convoy or being escorted.            | Escorted by special forces Pakistanis. Convoy in between. Senior al Qaeda tried to intersect convoy. "Locked and loaded." Suspect—people are watching us.   | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops  | Intel          |
| Have you had interactions with TCNs? If so, describe.                          | When we were escorting troops to the airport, I was in the lead vehicle. When we went to secure a bridge/overpass, a vehicle came to a halt and reversed towards us, and the guy jumped out and started asking us for directions. We weren't sure exactly what his intentions were or why he was asking us for directions in his own country. So, uncomfortable with the situation and knowing we had a convoy about to catch up to us, we directed him to get back into his vehicle and leave. | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops  | Intel          |
| Do people watch you or try to get information from you? If so, what do you do? | Never approach them.  | Situational awareness  | Refresher training<br>Combat skills (group)                                    |   | Intel          |
| What did you learn while OTW?  | Significant difficulty and danger in the summer months to go OTW with all the equipment that must be worn. It is impossible to stay hydrated and cool.  | Equipment issues   | Combat skills (group)<br>Combat exercise training (war games)                  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you experience OTW?   | Fired my weapon to protect my safety while OTW.   | Local customs  | Combat skills (group)<br>Combat exercise training (war games)                  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW?              | Feel, don't think. Trust your instincts. Be mindful of your thoughts.   | Additional necessary training  | Cultural situational awareness   | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |

Table F.1—Continued

| Question/Topic  | Response   | SME 1                 | SME 2                          | SME 3   | SME 4          |
|---|--|-----------------------|--------------------------------|---|----------------|
| Describe a suspicious situation.                                  | Situational awareness is required anytime you're in an unfamiliar situation.   | Situational awareness | Cultural situational awareness | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Always be prepared and know what is going on.  | Situational awareness | Cultural situational awareness | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Watch everyone closely and keep gear close by.   | Situational awareness | Cultural situational awareness | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Just be alert at all times.  | Situational awareness | Cultural situational awareness | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Keeping your head on a swivel, and maintaining good situational awareness.   | Situational awareness | Cultural situational awareness | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| Has there been a situation where your equipment is useless?       | We get cold weather gear—boots, parka, etc. Patching vehicles, throwing stuff together. I didn't bring a lot of the gear I was issued. | Equipment issues      | Non-training related           | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn while OTW?                                     | We need better individual protective equipment for military personnel.   | Equipment issues      | Non-training related           | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |

**Table F.1—Continued**

| Question/Topic  | Response   | SME 1                         | SME 2                                       | SME 3   | SME 4          |
|---|--|-------------------------------|---|---|----------------|
| What did you learn after you were deployed, but before going OTW? | Ballistic goggles (Wiley-X) are eye savers. They look like normal sunglasses, are comfortable, but provide ballistic protection as well as protection from sun and dust. They should be issued to everyone going over to the CENTCOM AOR.            | Equipment issues              | Non-training related                        | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| Has there been a situation where your equipment is useless?       | [Focus group conversation about equipment—about being deployed with useless equipment, individuals not knowing how to use the equipment they are given, individuals fashioning better equipment out of the gear/machinery that they have available.] | Equipment issues              | Non-training related                        | Individual tactics (personal)<br>behavior<br>Industrial equipment | FOB procedures |
| Have you ever had to deal with inexperience or lack of training?  | Most personnel don't need the training. They're safe where they are. No way to keep them proficient.   | Additional necessary training | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What training have you received for special circumstances?        | You get different training depending on AFSC, but everyone gets force protection briefings (PowerPoint presentation).  | Additional necessary training | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What additional training do you feel would be beneficial?         | Defensive postures.  | Additional necessary training | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Proper wear of body armor.   | Equipment issues              | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | The proper safety gear (helmet, level IV vest with all accessories).   | Equipment issues              | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |

Table F.1—Continued

| Question/Topic  | Response   | SME 1                         | SME 2  | SME 3   | SME 4          |
|---|--|-------------------------------|--|---|----------------|
| What did you learn after you were deployed, but before going OTW? | Also, there needs to be more training on body armor, weapons, and general force protection. Wearing a reflective belt in a country designated as a war zone is just wrong. Sure, someone driving on the base camp can see you, but so can the snipers trying to kill you.  | Equipment issues              | Refresher training<br>Combat skills (group)                                    | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn while OTW?                                     | I always thought body armor was you—just put your vest on, but [then] you have your neck piece and you have shoulder pieces and leg pieces and [when you're in some places,] you don't put on all that stuff, you just put on your jacket and your helmet that's pretty much it, but over there you have to put that extra stuff on, and I had to learn quickly how to put that stuff on.                          | Equipment issues              | Refresher training<br>Combat skills (group)                                    | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| Why did you go OTW?   | Our job was OTW. MSR Tampa is also a main terrorist supply route. At Talill they have a 40-ft berm to deter terrorists from getting to the fuel supply . . . . Once, terrorists blew up a fuel bladder. Huge fires, extremely dangerous. The fuel supply site was OTW to keep it away from personnel and the equipment. Anytime on duty OTW, personnel were in "full battle rattle" and armed. ("lock and load") . | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What made you feel as if you were in danger?                      | You're always worried about a "Snatch and Grab." Don't know who you can trust.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Stay together.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |
| What did you learn while OTW?                                     | I don't feel it would be any less dangerous with more training than with less training. But the training helps us to prepare for the worst or prevent the worst.   | Additional necessary training |  | Individual tactics (personal)<br>Behavior<br>Industrial equipment | FOB procedures |

Table F.1—Continued

| Question/Topic  | Response  | SME 1                         | SME 2   | SME 3      | SME 4          |
|---|---|-------------------------------|---|------------|----------------|
| What additional training do you feel would be beneficial?         | There were two hardened shelters, but they were both right outside the dining facility. The most ridiculous thing, when we get mortared, they put us in alarm red, lock everybody down after the attack. Everything is shut down. They interrupt our mission after the fact. Recovery phase—you get trained how to spot a UXO—but they don't shut down the mission for that. During recovery phase, everything shuts down. (Lock down.) People aren't getting trained, and for the most part they don't need to be. But for the stuff going on in the perimeter—just to recognize when there's a rocket somewhere on the base and to know what to do, who to call, etc. That should not interrupt the day-to-day operations. If training were oriented a slightly different way . . . Every unit has to do a UXO sweep, and after an undetermined amount of time, then we can carry on with the mission. And it happens again and again and again (start and stop every couple of hours). | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games) | Local ROEs | FOB procedures |
| What happened while interacting with locals?                      | If someone even looked remotely like they were pulling a weapon . . . they got one warning shot—SOP, “game on” if they continued.   | Local customs                 | Cultural situational awareness                                | Local ROEs | FOB procedures |
| What did you learn while OTW?                                     | We were out jogging around the lake one time, and we started hearing—like, you know when you throw a rock at the water, it makes that funny noise? We started hearing that, and a couple of days later, the Army first sergeant sent out a message that there was no more running around the lake because there were snipers out there. So, we didn't know it at the time, but we came to find out that's what it was.  | Situational awareness         | Cultural situational awareness                                | Local ROEs | FOB procedures |
| What did you experience OTW?                                      | Going OTW for exercise.   | Situational awareness         | Non-training related  | Local ROEs | FOB procedures |
| What did you learn after you were deployed, but before going OTW? | Code words.   | Additional necessary training | Pre brief   | Local ROEs | FOB procedures |

**Table F.1—Continued**

| Question/Topic   | Response   | SME 1                 | SME 2  | SME 3                        | SME 4          |
|--|--|-----------------------|--|------------------------------|----------------|
| What happened while interacting with locals?                                   | Most of the local nationals are more familiar with the ROEs than we are. For instance, we cannot engage an individual, and we can't use an automatic weapon on an individual. That's why they're more scared of handguns [than] the automatics.  | Local customs         | Refresher training<br>Combat skills (group)                                    | Local ROEs                   | FOB procedures |
| What made you feel as if you were in danger?                                   | While inside the base in Iraq, mortar fire hit the base.   | Situational awareness | Refresher training<br>Combat skills (group)                                    | Local ROEs                   | FOB procedures |
| What did you learn while OTW?  | I was in Ramadi, and that's the . . . heaviest bombed area there is, and there were snipers out there. It's kind of funny—one day I went in there twice, and the first time, we saluted an officer, and he yelled at me: "We don't do this here. There are guys outside watching us right now taking pot shots at us!" It kind of scared me a little bit. When I joined the military, I didn't know I was going to war. In the Air Force, you don't salute out in the field, but at Camp Victory, they made us salute all officers on base. So, when we hopped into one of the other operating bases, I just saluted; I was used to it, and this Lieutenant yelled at us not to. | Situational awareness | Rules of engagement (group)  | Local ROEs                   | FOB procedures |
| What causes problems with the locals?  | Crazy army guys would go out wanting to shoot someone. . . . In convoys, people were more scared of an M-16 [than] a 50 cal handgun. Whatever comes into your line of view, you can put a "line" on them.  | Situational awareness | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local ROEs                   | FOB procedures |
| Do people watch you or try to get information from you? If so, what do you do? | Report up your channels.   | Situational awareness | Cultural situational awareness   | OPSEC<br>Local OPSEC threats | FOB procedures |

**Table F.1—Continued**

|--|---|-------------------------------|--|--|----------------|
| Describe a suspicious situation.                                 | Kids playing in a huge dump on the edge of Camp Cedar. Had crawled through the wire/motion sensors. | Situational awareness         | Language training, basic<br>Subcategory: cultural, situational awareness | OPSEC<br>Local OPSEC threats   | FOB procedures |
| Have you ever had to deal with inexperience or lack of training? | Big Blue AF is not prepared for being overseas.   | Additional necessary training | Cultural situational awareness   | ROE and local procedures   | FOB procedures |
| What training have you received for special circumstances?       | “Griffen group.”  | Additional necessary training | Non-training related   | ROE and local procedures   | FOB procedures |
| Describe a time when you worked in a joint military environment. | AEF is a perfect example. You’re grabbing people from all over to fill different manning positions. | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games)            | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |

Table F.1—Continued

| Question/Topic   | Response   | SME 1                         | SME 2   | SME 3  | SME 4          |
|--|--|-------------------------------|---|--|----------------|
| Describe a time when you worked in a joint military environment. | Typically, joint air-land battle doctrine. Special operating units. Forward air controllers. 1 or 2 marine or naval officers (SEALs) worked with us every day to learn lingo and communication. In the field, and you're trying to train someone or be stealthy . . . there are different ways to do things. Most of the stuff that should happen, everybody gets together in that unit and goes over the mission, the armament; this is how we're going to get from point a to b; this is point c for extraction. Given everyone else's experiences, is there anything else we need to consider, think of? Best experiences are the ones that are going to be most adaptive. But there are communication difficulties. All branches have different ways of getting missions done. Most units don't know how to categorize AF people, how to work with them. Don't know what we've been trained in, what we haven't been trained in. | Additional necessary training | Combat skills (group)<br>Combat exercise training (war games) | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |
| What additional training do you feel would be beneficial?        | Fire department needs to be a lot more combat ready than they are. Even though we aren't outside the fence, we're in the middle of the airfield in big red trucks—bright red targets.  | Situational awareness         | Combat skills (group)<br>Combat exercise training (war games) | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |
| What did you experience OTW?                                     | Encountering UXOs.   | Additional necessary training | Refresher training<br>Combat skills (group)                   | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |

**Table F.1—Continued**

| Question/Topic  | Response   | SME 1                         | SME 2  | SME 3  | SME 4          |
|---|--|-------------------------------|--|--|----------------|
| Has there been a situation where your equipment is useless? | Every time you leave the base, everybody's locked. As a show of strength, there's a weapon hanging out of the door. People make all sorts of makeshift equipment.  | Additional necessary training | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |
| How do you travel when on foot?                             | Normally traveling with 5 to 10 people.  | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |
| What did you learn while OTW?                               | Make sure we stay together.  | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Small team tactics<br>Weapons training<br>Actions<br>49th group in movement, return fire, etc. | FOB procedures |
| What did you experience OTW?                                | All the time we traveled was on a helo. The farthest time was probably about a six-hour ride. I had to distribute vehicles throughout the different parts in Iraq and then also went on trips with some of the other guys to deliver parts or install radios and stuff like that. We would land the helo OTW to fix things. I was bombed at, shot at, I prayed. The one time we were bombed, I just got underneath my—it was an overnight trip, and it happened in the middle of the night—and I crawl under my bed and put my flight jacket on and helmet and stayed there. | Equipment issues              | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops   | FOB procedures |

|--|---|---------------|--------------------------------|---------------------------------------|------------------|
| What causes problems with the locals?        | If you go to a Haji-Mart, in uniform and fully loaded or not, they're trying to make a living so they're for the most part friendly. But you have to be polite, deferential. Don't make hand gestures [or show] the bottom of the feet. They have a different value system in terms of how members of the family are treated. The woman is last. The guys went nuts when some of the people we brought on base saw that there were women enlisted giving instructions to commissioned officers. They don't like the way our country looks at everyone—gender, age, nationality—equally. | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happens during prayer time?             | During Desert Storm we used to be able to go to Riyadh(?). During prayer time, the women weren't doing something right and the religious police came up. They (the women and the group they were with) were Brits. They weren't as "PC" as us and they said something. Things escalated . . . the women got pummeled with sticks.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals? | They told us: "Don't talk to them." There were kids playing. There were sheep boys. They hated us. We were over there burning trash, destroying their environment. There was no reason to stop the truck and talk to them.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happens during prayer time?             | In Saudi, everything shuts down.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What did you experience OTW?                 | Seeing Americans reacting negatively in public to cultural differences.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals? | Under certain circumstances, we were taught not to interact with the locals. If they are in all black, absolutely do not talk to the women. If they are seen interacting with men, that could be bad news. Girls not wearing all black are less restricted; some have come up and talked with the Americans. But the males are always watching the females.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1         | SME 2                          | SME 3                                 | SME 4            |
|---|--|---------------|--------------------------------|---------------------------------------|------------------|
| What cultural issues were surprising to you?              | In South America, energy focused on enemies, military. In Middle East, women and children.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?              | Abuse of women—there’s nothing you can do. You do not intervene. I’ll treat ‘em after they’ve been beat up, but you do not get involved. I’ll take care of ‘em later. Babies are getting injured. It’s hard, but I can’t change it. I’ve seen regular army folks try to get in the middle. In some locations you can intervene temporarily, but when you leave, it’s going to get worse. | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?              | Women become uncomfortable. The Army guys who have been gone for a long time, there are a lot of attractive women. “Everything’s gone on”—eye-winking to sexual assault.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What differences in culture did you notice?               | Dealing with people who’ve had a lack of training. Culture has a lot of screaming, they’re more passionate than we are. It’s better if you remain calm. Things get heated, using fists—that happens too much. Never seen weapons used indiscriminately.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What did you experience OTW?                              | Meeting locals.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?              | Threat in Iraq was pretty extreme. Locals did a bazaar on base. They’re really friendly, talking you up, trying to make the sale.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What cultural issues were surprising to you?              | Men kissing whenever you meet.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What additional training do you feel would be beneficial? | Customs/courtesies.  | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |
| What happens during prayer time?                          | I think of it as safe time. 15 minutes later, it’s over.   | Local customs | Cultural situational awareness | Local customs Interacting with locals | Culture training |

**Table F.1—Continued**

| Question/Topic   | Response  | SME 1         | SME 2                          | SME 3                                    | SME 4            |
|--|---|---------------|--------------------------------|--|------------------|
|  | If you get in an accident, don't look at the other driver—that means that you're at fault.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                                   | In Saudi, there is not even an option to talk to the women. But in countries where women can drive, it's definitely a problem.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                                   | Taught to leave the women alone.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happens during prayer time?   | In Pakistan, if there are Americans near certain mosques, it just takes one American to flare a riot. You're told not to go towards mosques, but stupid people do go towards the mosques.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                                   | We don't really go to bazaars in the local area . . . . The bazaars are brought to the base.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?  | Most of the local community is not carrying bombs around, setting up mines, etc. I just tried not to leave a bad impression. The locals don't have a lot of organization—they feel like it's their country and they can set up anywhere they want. Every week, especially along MSR Tampa, we're knocking down the little huts. | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?  | Obnoxiousness.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                                   | You could tell that the locals didn't like us. Some people smiled, but you could hear them mutter under their breath.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| Do people watch you or try to get information from you? If so, what do you do? | What makes Americans stick out? Clothes, accents. Even a 6-year-old could pick us out as Americans.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |

Table F.1—Continued

| Question/Topic  | Response  | SME 1         | SME 2                          | SME 3                                    | SME 4            |
|---|---|---------------|--------------------------------|--|------------------|
| What differences in culture did you notice?                       | Bad treatment of animals. They don't really care for dogs.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What cultural issues were surprising to you?                      | Human rights violations are out of control. Especially training foreign militaries. 16-year-old was beaten with a baseball bat for doing push-ups incorrectly.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?                             | Car accident: Embassy policy is to have the person involved in the accident leave the country immediately—nationals don't like it because they can't bring charges or have the person around for the family to be mad at.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                      | The Haji-Mart: A lot of people would go there to get money, pirated DVDs, Iraqi uniforms, alcohol. There, the locals would come up, BS with you, speak perfect English. There were GIs going there all the time. The local would come up in a brand new Mercedes, say they went to school in Texas . . . . It was just crazy. | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                      | There were churches/mosques in the shopping districts—sometimes we'd take pictures, and they didn't really like that. No one told us that before, but our translator did let us know. Even taking a picture of a car dealership caused some trouble.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What did you learn after you were deployed, but before going OTW? | A few local customs.  | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                      | It's a big flea market, and the only shoppers are us.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happens during prayer time?                                  | It really varies by country. Pakistan 80 percent, Saudi 100 percent, Iran 30 percent.   | Local customs | Cultural situational awareness | Local customs<br>Interacting with locals | Culture training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1                         | SME 2   | SME 3                                 | SME 4            |
|---|--|-------------------------------|---|---------------------------------------|------------------|
| What differences in culture did you notice?           | Travel elders. Meet and greet, drink a lot of tea. Know what to talk about, what not to talk about. They love to talk politics. What do you think about your president, Israel? Unsuccessful people are arrogant. Bring the locals to the safe house, bring locals for contracts, cleared by OSI—they have lunch. We pay them, feed them, take care of them. The gardener. Kids outside the street. Come up when we're checking the truck. A few simple polite phrases can go a long way. If you don't speak the language, it's much harder to build rapport. Women are more standoffish, men less so. | Local customs                 | Cultural situational awareness  | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?          | If you go out to play/shop, you follow all local laws. Common sense dictates in many situations.   | Situational awareness         | Cultural situational awareness  | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?          | Usually, we have good enough intelligence to learn how not to make nationals uncomfortable.  | Situational awareness         | Cultural situational awareness  | Local customs Interacting with locals | Culture training |
| What did you experience OTW?                          | Going OTW to go to bars.   | Situational awareness         | Cultural situational awareness  | Local customs Interacting with locals | Culture training |
| What happened while interacting with locals?          | Base commander, SF commander. Come over to the house for dinner.   | Additional necessary training | Language training, basic Subcategory: cultural, situational awareness | Local customs Interacting with locals | Culture training |
| Have you had interactions with TCNs? If so, describe. | Language; trying to translate job task and payment—this happened when I [was in] Oman.   | Local customs                 | Language training, basic Subcategory: cultural, situational awareness | Local customs Interacting with locals | Culture training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1         | SME 2  | SME 3                                    | SME 4            |
|---|--|---------------|--|--|------------------|
| What additional training do you feel would be beneficial? | In Iraq—handbook of customs and courtesies. Phrases—just basic stuff.  | Local customs | Language training, basic<br>Subcategory: cultural, situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?              | We didn't really know any of the language. We had translators with us. The only thing I really learned how to say was to say that I didn't want cabbage on my hamburger. The locals liked having us around because we spent a lot more money. Other customers would glance at us—"oh look, there's an American"—and leave it at that. Everyone I interacted with was very polite | Local customs | Language training, basic<br>Subcategory: cultural, situational awareness | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?                     | Looking, talking.  | Local customs | Language training, basic<br>Subcategory: cultural, situational awareness | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?              | There was discomfort when we couldn't speak Arabic and the locals didn't speak English. They wanted desperately to give us what we wanted.   | Local customs | Language training, basic<br>Subcategory: cultural, situational awareness | Local customs<br>Interacting with locals | Culture training |
| What differences in culture did you notice?               | People used too much force. Fists. "Not good ambassadors."   | Local customs | Non-training related   | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?                     | Testosterone.  | Local customs | Non-training related   | Local customs<br>Interacting with locals | Culture training |
| What cultural issues were surprising to you?              | Fraud investigations.  | Local customs | Non-training related   | Local customs<br>Interacting with locals | Culture training |

**Table F.1—Continued**

| Question/Topic                               | Response   | SME 1         | SME 2  | SME 3                                    | SME 4            |
|--|--|---------------|--|--|------------------|
| What cultural issues were surprising to you? | The nurses were going to inject patients with cyanide?   | Local customs | Non-training related   | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?        | Guys throwing stuff. They'd make huts by the side of the road, the Army would go and knock 'em down because they would try to put bombs in 'em. The locals were on the side of the road trying to peddle stuff, make a living. Army guys would throw bottles of water, etc.  | Local customs | Refresher training<br>Combat skills (group)                                    | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?        | Sexual assault, rape (Army, Marines) leads to the hatred of Americans in a town.   | Local customs | Subcategory: cultural, situational awareness                                   | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals? | Comm personnel would buy equipment from a Home Depot-like store. Satellites, etc. In Bosnia, you have Muslims, Protestants, Catholics. You don't see many traditional Muslims. Some of the people you could really tell the difference. They could always tell us. You walk up to the counter and they instantly start speaking English. | Local customs | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals | Culture training |
| What did you experience OTW?                 | Being on foot and approached by men only.  | Local customs | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals | Culture training |
| What causes problems with the locals?        | People on base who are showing a negative attitude towards Americans are removed quickly. It usually happens because of something that happens off base to family, something like that.  | Local customs | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals | Culture training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1  | SME 2  | SME 3                                    | SME 4            |
|---|--|--|--|--|------------------|
| What did you experience OTW?                                      | Going outside to go to open market.  | Local customs  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals | Culture training |
| What happened while interacting with locals?                      | Driving next to the Embassy, a riot takes place—it doesn't have anything to do with us. We look white, all of the sudden they're up close, shaking the car.  | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals | Culture training |
| Have you had any incidents with the local police?                 | Anyone carrying a AK-47 is suspect. The Iraqi Army, and the Iraqi police are the most corrupt groups over in Iraq. Just seeing them increases the danger because they can't have a total lack of discipline. They also tend to shoot at Americans, then run and pretend to be our friends. | Local customs  | Cultural situational awareness   | Local ROEs                               | Culture training |
| Have you had any incidents with the local police?                 | Got into the news that Americans left someone for dead after an accident (a local police/terrorist—Pakistani). Riot started.   | Situational awareness  | Cultural situational awareness   | Local ROEs                               | Culture training |
| What did you learn after you were deployed, but before going OTW? | We basically just received a lot of information localized to that area. Mostly security information and threat levels.   | Situational awareness  | Cultural situational awareness   | Local ROEs                               | Culture training |
| What happened while interacting with locals?                      | Embassy driver, sometimes cop escort, go ahead and go downtown to the bazaars. No official training (but this was pre 9/11).   | Local customs  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local ROEs                               | Culture training |
| What additional training do you feel would be beneficial?         | More awareness training. Intel brief 5 minutes prior is not sufficient.  | Additional necessary training  | Cultural situational awareness   | OPSEC<br>Local OPSEC threats             | Culture training |

**Table F.1—Continued**

| What did you learn after you were deployed, but before going OTW?   | Driving.  | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Culture training |
| Describe a time when you were riding in a convoy or being escorted. | Big army tanks run over the whole vehicle. Shoot 'em. "Let them know that they're doing something stupid."<br>Physical manipulation/gesture. If they keep doing something stupid, you assume that it's an attack. | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Culture training |
| What differences in culture did you notice?                         | Foreign nationals that the locals hire to do manual labor on base.  | Additional necessary training  | Cultural situational awareness   | Working with TCNs  | Culture training |
| Have you had interactions with TCNs? If so, describe.               | During some of our stops. people would come up out of what seemed like empty houses or just ride up and stop, trying to sell us (Iraqi) money or ice or drinks.   | Situational awareness  | Cultural situational awareness   | Working with TCNs  | Culture training |

Table F.1—Continued

| Question/Topic  | Response  | SME 1  | SME 2  | SME 3   | SME 4                      |
|---|---|--|--|---|----------------------------|
| Have you had interactions with TCNs? If so, describe. | I was a TCN escort and we had problems all the time with language barriers. I was not familiar with the layout of the base but was tasked with escorting a TCN down by the flightline. Turns out the TCN didn't have proper paperwork to be in that area and airfield management threatened to have security forces come and escort them off base if I did not escort them immediately. I tried explaining this to the TCN and he refused to stop the car and exit the base until one of our NCOICs came to help me. I believe lack of training for TCN escorts could be partially to blame, not just the language barrier. There were many times I would be on post and tell TCNs to stop their activities, be it walking too close to an ESP or not smoking in government facilities, and they wouldn't follow my instruction and I would have to find a male to tell them to stop because they don't respect female authority. | Local customs  | Language training, basic<br>Subcategory: cultural, situational awareness       | Working with TCNs   | Culture training           |
| Have you had interactions with TCNs? If so, describe. | Trying to get building supplies for base. Delivery of such materials at a certain time and having to go back for more.  | Local customs  | Non-training related   | Working with TCNs   | Culture training           |
| What happened while interacting with locals?          | In PSAB, there was a TCN who thought he could do anything he wanted with women—saw the TCN grab a woman's breast. He was permanently escorted off base.   | Additional necessary training  | Subcategory: cultural, situational awareness                                   | Working with TCNs   | Culture training           |
| What did you learn while OTW?                         | Be alert and prepared for anything. When traveling off base as a passenger, stay alert and <b>don't</b> take a nap or close your eyes. Know what to do in case of attack or accident.   | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Individual tactics (personal)<br>Behavior<br>Industrial equipment | Combat procedures training |
| What causes problems with the locals?                 | Vehicle accidents.  | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local customs<br>Interacting with locals                          | Combat procedures training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1  | SME 2  | SME 3              | SME 4                      |
|---|--|--|--|--------------------|----------------------------|
| Why did you go OTW?   | We were billeted off base in Kuwait. We traveled from the hotel to the base. We were escorted a couple of times, but usually not. We usually traveled in a hotel bus or AF bus while unarmed with no escort. Nothing ever happened, but if it had, we wouldn't have known what to do. There were no standing plans for what to do if we were attacked. | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Local ROEs         | Combat procedures training |
| Describe a time when you were riding in a convoy or being escorted. | Travel in [an] SUV or whatever you've got. Sometimes escorted. Accompanied by 10–12 guys.  | Additional necessary training  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn after you were deployed, but before going OTW?   | Received briefings on how to check vehicles for bombs.   | Additional necessary training  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What additional training do you feel would be beneficial?           | Those guys, when they do Tomboys, they have to go out to Arizona and go to convoy school, and it helps them. So, if anybody can do any training before they go over to that AOR, it's going to benefit them. Anywhere from driving a bomber Humvee (and get some practice first) [to learning] how to spot IED.  | Additional necessary training  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What additional training do you feel would be beneficial?           | Defensive driving.   | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |

**Table F.1—Continued**

|---|--|--|--|--------------------|----------------------------|
| What additional training do you feel would be beneficial?         | Convoy training—most people could find themselves in a convoy.   | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn after you were deployed, but before going OTW? | Humvee rollover procedures to protect the gunner. Would have been dangerous for the gunner, had we not had the training. | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn while OTW?                                     | If you get a flat in a deuce, it will take all day to get motor pool approval to come out and help you fix it.           | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn while OTW?                                     | Drive fast between checkpoints.  | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn after you were deployed, but before going OTW? | How to secure your vehicle during an attack.   | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |

**Table F.1—Continued**

| Question/Topic  | Response   | SME 1  | SME 2  | SME 3              | SME 4                      |
|---|--|--|--|--------------------|----------------------------|
| What did you learn after you were deployed, but before going OTW?         | In Kuwait, before being allowed to drive off base, we had to take a local driving class that included evasive actions to take in certain situations.   | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What additional training do you feel would be beneficial?                 | Sometimes you can't really train for it; you just have to accept it when it comes. Convoy training is probably the biggest one because we had to go back and forth—to the Air Force base, to the Army base—back and forth all the time. And we would have to put on [protective gear] right and drive over. So, knowing how to do convoy procedures as a pre-op. Knowing when to stop or when to keep going, what to look for, the speeds you have to maintain, and about wearing your helmet when [you're] driving along the road. It sounds kind of funny, but it's just pretty much commonsense-type stuff. | Local driving conditions<br>Convoy procedures<br>Securing vehicle<br>Defensive positions | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| Did you experience danger while traveling on a bus? If so, what happened? | If something were to happen, folks who were trained would consider getting off the bus and doing some escape and evasion. "I'd want to get close to our people who have guns."   | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you experience OTW?  | Being in a convoy and seeing dead bodies by the side of the road.  | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What additional training do you feel would be beneficial?                 | Blackwater security guys (they have trail vehicles). They call it in, and they go chase them. We've been taught that if you get shot at, you run.  | Situational awareness  | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |

Table F.1—Continued

| Question/Topic  | Response   | SME 1                         | SME 2  | SME 3              | SME 4                      |
|---|--|-------------------------------|--|--------------------|----------------------------|
| Describe a time when you were riding in a convoy or being escorted.       | People approaching the convoy.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you experience OTW?  | Seeing burned-out vehicles when you are in a convoy.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| Did you experience danger while traveling on a bus? If so, what happened? | Everybody's different. Some would stay on the bus and hope that security police take care of it.   | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| Describe a time when you were riding in a convoy or being escorted.       | In the 12 times going to the airport, never had anything happen. Any cars that get close are "directed away" into the ditch. Unarmed and in civilian clothes. We're told to go to the center of the bus and wait (if anything threatening happens). Be ready to take over for the bus driver if he gets incapacitated. | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What did you learn after you were deployed, but before going OTW?         | Make sure we check our cars before and after going out of the wire.  | Situational awareness         | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training | Vehicle/convoy ops | Combat procedures training |
| What additional training do you feel would be beneficial?                 | Camp Eudari(?) in Kuwait provided training in convoy defense (special training).   | Additional necessary training | Vehicle convoy ops (group)<br>Mobile force protection<br>Surveillance training |                    | Combat procedures training |

**Table F.1—Continued**

| Question/Topic  | Response  | SME 1                 | SME 2                                       | SME 3   | SME 4 |
|---|---|-----------------------|---|---|-------|
| Has there ever been a situation where you are less prepared than other group members? | [Focus group conversation on having weapons while deployed. Participant (who never went OTW) noted that everyone deploys with a weapon, but most haven't had recent training on how to use it. She also noted that most people who take them don't usually carry them around—you could, but you could also leave it in the armory or even leave it in the room. This seemed to surprise the participants who spent time OTW.] | Situational awareness | Refresher training<br>Combat skills (group) | Individual tactics (personal)<br>Behavior<br>Industrial equipment |       |
| Why did you go OTW?   | Sometimes we just wanted to get off the base and go into the community.   | Situational awareness | Cultural situational awareness              | Local ROEs  |       |
| What did you learn after you were deployed, but before going OTW?                     | Be vigilant and aware at all times. Just because you are in a friendly nation doesn't mean that there aren't people who might try to attack or spy on you.  | Situational awareness | Cultural situational awareness              | OPSEC<br>Local OPSEC threats                                      |       |

**Table F.2**

| Question/Topic   | Response   | SME 5                 | SME 6                       | SME 7               |
|--|--|-----------------------|-----------------------------|---------------------|
| Describe a suspicious situation.   | Iraqis taking pictures.  | Threats               | Watch surroundings<br>Intel | Suspicious activity |
| What made you feel as if you were in danger?                                   | There are snipers with spotters OTW. If you see something suspicious, call it in to tactical operations center. They'll deal with it. Follow the rules of engagement.  | Threats               | Watch surroundings<br>Intel | Suspicious activity |
| Describe a suspicious situation.   | Moped on top of the berm.  | Threats               | Watch surroundings<br>Intel | Suspicious activity |
| Have you had any incidents with the local police?                              | Seeing an Iraqi policeman out on a street/intersection and wondering if he was a good guy.   | Threats               | Watch surroundings<br>Intel | Suspicious activity |
| Do people watch you or try to get information from you? If so, what do you do? | I don't trust anyone in the AOR. People approach. It's all psyops. It's how you play the game with them. The people are extremely well trained. They speak English. They elicit information. They're trained. People are trained to approach you—the most dangerous ones are the ones who are just trying to build rapport. I'm friendly, extremely cognizant; I'm looking for changes in patterns. Once I've reported something—often those people won't come around again. Sometimes they do—they're just nice people. | Threats               | Watch surroundings<br>Intel | Suspicious activity |
| Have you had interactions with TCNs? If so, describe.                          | One girl got in trouble for a fling with a TCN. They found him on base. I also saw a picture of a really cute guy on a bulletin board—got closer and saw that it was a wanted sign for a TCN who was loose on the base. If I'd run into him, I would have let him in.  | Situational awareness | Watch surroundings<br>Intel | Suspicious activity |
| Describe a suspicious situation.   | Bodies, dead animals, burned-out vehicles—anything within certain proximity of the MSR is what we're keeping close tabs on. Cars that could be explosives—or dead bodies (bomb in the arm, etc.).  | Situational awareness | Watch surroundings<br>Intel | Suspicious activity |
| What training have you received for special circumstances?                     | Surveillance.  | Situational awareness | Watch surroundings<br>Intel | Suspicious activity |
| What additional training do you feel would be beneficial?                      | How to spot terrorists.  | Situational awareness | Watch surroundings<br>Intel | Suspicious activity |

**Table F.2—Continued**

| What did you experience OTW? | Encountering checkpoints while driving.   | Threats         | Watch surroundings<br>Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | Being on foot and approached by a vehicle.  | Threats         | Watch surroundings<br>Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | Seeing snipers.   | Threats         | Watch surroundings<br>Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | I was actually really very nervous. We didn't have weapons with us. We had taken a trip from the base to the embassy, and we were stopped at a traffic light downtown in Kuwait City. And we're kind of sight-seeing, taking pictures of the surroundings. But at the same time, . . . we had 7 people in this van, and the windows weren't tinted, and everyone could see all of us in uniform. And people would just sit there and stare at you . . . they would stop what they were doing and turn their heads, which was really uncomfortable—you know, especially when you don't have any weapons, and you don't know what they're thinking. | Tactical skills | Watch surroundings<br>Intel | ROE and local procedures OTW<br>What to expect |

**Table F.2—Continued**

| What did you experience OTW? | Going outside for off-installation dining.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | In Taif, we'd go shopping, get pizza, go to restaurants.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | Go OTW to buy alcohol.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | Taking a trip OTW to see the local attractions in order to boost morale.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | Go OTW to engage in recreational activities.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | Going outside for AF-sponsored morale trips.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | We used to go out in the community to go shopping every week. We went in groups on a bus. We wore flak vests for protection. |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | Going OTW for fun.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?          | Leave the base to go shopping at a mall in downtown Kuwait.  |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW? | Going OTW to go to stores.   |          | Recreation travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |

**Table F.2—Continued**

| Question/Topic                               | Response  | SME 5                      | SME 6                    | SME 7  |
|--|---|----------------------------|--------------------------|--|
| What made you feel as if you were in danger? | The situation had the potential to be dangerous solely because we were transporting millions of Afghani (about \$850,000) to pay a local vendor for a large purchase. As long as no one knew what we were doing, then we were not in any danger, and we accomplished this without incident by putting the money in empty water boxes so no one would know what we were doing. | Misc. no impact, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | Go OTW to help locals put out a fire in the area.   | Military travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | Going OTW to pick up supplies from the community.   | Military travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | In order to establish a new facility, someone has to go downtown to purchase supplies.  | Military travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | Going OTW to check out merchandise from local contractors. While it's usually pretty safe, you are informed that there are hostiles in the area. You have no weapons. A local approaches your group.  | Military travel, nonplayer | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What did you learn while OTW?                | We (aircrew) were made very aware of the danger to our aircraft flying in and out of Bagram AB. Spotters were always posted to alert of danger.   | Aircraft issues nonplayer  | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Every time you leave the base there is a threat to your safety. I am a pilot, so most of my time OTW was in the air. We are exposed to numerous ground threats as we transit in and out of the airfields. The threat is always there, but the level of danger changes with the airfield.  | Aircraft issues nonplayer  | Watch surroundings Intel | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Being approached by a person carrying a bomb.   | Threats                    | UOF/ROE                  | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Being approached by people trying to surrender.   | Threats                    | UOF/ROE                  | ROE and local procedures OTW<br>What to expect |

Table F.2—Continued

| Question/Topic                               | Response  | SME 5                        | SME 6   | SME 7  |
|--|---|------------------------------|---------|--|
| What did you experience OTW?                 | Being approached by a person carrying another type of weapon.   | Threats                      | UOF/ROE | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | While blocking an intersection, a vehicle approached and would not come to a stop. At first, I raise my hand to get him to stop. I then had to point my gun at him and he still came on. He finally stopped when I charged my weapon. He then took out his cell phone and took a picture of me. | Tactical skills              | UOF/ROE | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | I flew combat missions almost every night of my 60-day deployment. The threat from the enemy is high, and it's <i>real</i> . We observed some sort of ground fire toward our aircraft nightly.  | Aircraft issues<br>nonplayer | UOF/ROE | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | When there are aircraft mishaps, people from the safety office travel to the scene to figure out what happened. Usually, they are given a gun and told "good luck."   | Weapons training             | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Fence line was close—and I saw a vehicle hit with an RPG.   | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Perimeter road is right against the wire. People can hide in the weeds with an RPG, RPK. There is a guard tower.  | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Mortars coming into camp and shrapnel hitting our roof.   | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Getting shot at.  | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | While inside the base in Iraq, there was mortar fire in the area, but it is wasn't reaching the base.   | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Gunfire and RPG shot at our helo.   | Threats                      | Tactics | ROE and local procedures OTW<br>What to expect |

**Table F.2—Continued**

| Question/Topic                               | Response   | SME 5                      | SME 6   | SME 7  |
|--|--|----------------------------|---------|--|
| What did you experience OTW?                 | Seeing close mortar fire.  | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | The first shaking of the trailer when you're taking mortar. "Oh my God, they're trying to kill us." There's nothing you can do—either you're going to die or you're not. You can duck and cover if you want to, but [it's] not going to do you any good. | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Seeing RPG fire.   | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Snipers shooting at base entrance.   | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Dealing with suicide bombers.  | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What made you feel as if you were in danger? | Firefighters contained to the airfield. They worked 24-hour shifts. They'd go off base for whatever needs to get taken care of. Shelled all the time. Didn't have hardened shelters then.  | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Hearing mortar fire.   | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Seeing scattered rifle fire.   | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| What did you experience OTW?                 | Hearing scattered rifle fire.  | Threats                    | Tactics | ROE and local procedures OTW<br>What to expect |
| Why did you go OTW?                          | As part of special ops, we're spun up on training, we have a different mentality. But the average guy could have to make a run from the bank to the base.  | Military travel, nonplayer | Tactics | ROE and local procedures OTW<br>What to expect |

Table F.2—Continued

| Have you had interactions with TCNs? If so, describe.                                 | TCNs/Iraqi AF/locals were in the dining hall with us all the time. I was never confident that they had been vetted well enough. Especially I felt this way with Iraqis. The Army and civilian contractors did not give me confidence in their approach to who was allowed access to secure dining facilities where great numbers of military gathered at regular hours. | Situational awareness            | Watch surroundings<br>Intel        | Not applicable  |

Table F.2—Continued

| Question/Topic   | Response   | SME 5                         | SME 6                    | SME 7          |
|--|--|-------------------------------|--------------------------|----------------|
| Why did you go OTW?  | Bosnia was different [than anywhere] else. Cake assignment. Lived in a house off base. Drive in cars for work. Eat at local establishments for lunch. Locals didn't speak English. Typical day, didn't leave Sarajevo, every three weeks we'd gear up and leave the area—more aware status. If we stayed within the bowl you didn't carry a loaded weapon, a little more relaxed. If you leave the area, you carry a weapon, more aware of the surroundings. | Recreation travel, nonplayer  | Watch surroundings Intel | Not applicable |
| What made you feel as if you were in danger?                     | I was the personal photographer for the Stabilization Force Commander at Sarajevo, Bosnia. We took more than 40 trips to different Battle Groups in Bosnia. I felt just a little dangerous due to the Commander's position and mode of travel. While in Iraq, I only went OTW for only 30 minutes for an alert photo op.   | Military travel, nonplayer    | Watch surroundings Intel | Not applicable |
| Have you ever had to deal with inexperience or lack of training? | It takes 6 people getting killed before commanders look at ROEs. We're much better prepared, much better focused.  | Misc. no impact, nonplayer    | UOF/ROE                  | Not applicable |
| Have you ever had to deal with inexperience or lack of training? | Since the AF people don't get the training to understand what they're doing—the level of understanding to comprehend what's going on around you—which is okay. So they just confined. 2 percent, 3 percent of the people [can] leave the base. Chances are slim that they'd have to go. The AF is not going to come up with a bunch of infantry training for a bunch of people.  | Misc. no impact, nonplayer    |                          | Not applicable |
| What happened while interacting with locals?                     | People on base who are showing a negative attitude towards Americans are removed quickly. It usually happens because of something that happens off base to family, something like that.  | Situational awareness         | Language Culture         | Not applicable |
| What causes problems with the locals?                            | Vatican City—erected a large steeple for the chapel; they didn't like that (thought it would be a target, better as a crescent).   | SERE Intel equipment training | Language Culture         | Not applicable |

|--|---|----------------------------|------------------|-----------------------------|
| What made you feel as if you were in danger?                     | We had to respond to an incident where the Afghan National Army and the Afghan National police had fired at each other. We went down to the Governor’s Compound for a meeting and during the meeting, the police and army showed up and we were between them and tensions were very high. I was afraid they would start shooting at each other and we would be caught in the middle.  | Misc. no impact, nonplayer | Language Culture | Not applicable              |
| Have you had interactions with TCNs? If so, describe.            | Young teen male in Iraq was trying to sell knives at the gate to the base and held a knife in a manner that could have been mistaken as threatening. Advised Security Forces member, who instructed the kid to put the knife away. The teen complied on verbal commands only and no threat of force was required on our end. The local Kurdish kids who normally sold DVDs there then threatened to beat him up because he was from a different neighborhood and he left. | Threats                    | UOF/ROE          | Language barriers           |
| Have you had interactions with TCNs? If so, describe.            | Many times, there was confusion with TCNs when trying to explain security measures to them.   | Threats                    | Language Culture | Language barriers           |
| What did you experience OTW?                                     | Being unable to communicate due to language.  | Language                   | Language Culture | Language barriers           |
| Have you had interactions with TCNs? If so, describe.            | We had a very good interpreter that worked for our office, and he was able to communicate our ideas to the locals on what was expected. One of our inspectors, however, told a local that he needed to accomplish the job correctly or he would get fired. Unfortunately, the local, with limited English, thought that getting fired is the same as getting shot. We had to calm him down and explain the difference through our interpreter.                            | Language                   | Language Culture | Language barriers           |
| Have you had interactions with TCNs? If so, describe.            | All contact[ing] was hard without [a] translator.   | Language                   | Language Culture | Language barriers           |
| Describe a time when you worked in a joint military environment. | Air Force teaches muzzle up, Army teaches muzzle down. I didn’t know that until I got to Iraq.  | Weapons training           | Joint ops        | Joint environment education |
| What did you learn while OTW?                                    | Army training.  | Weapons training           | Joint ops        | Joint environment education |

|--|---|-------------------------------------|------------------|--------------------------------|
| What training have you received for special circumstances?       | Foreign protection.   | SERE<br>Intel equipment training    | Joint ops        | Joint environment education    |
| [What about] differences when working in joint environment?      | We were at a base where there [were] about 1,000 Air Force and about 4,000 Army [personnel]. The Air Force was in charge of the base, which was okay with the Army, but the Army—whatever unit—was in charge of everything in that area. So we had rules that certain times of the day that we would have to wear our IPE gear . . . very uncomfortable stuff. And at the time, because of the threat, we had to wear extra tank, extra flack—Army didn't have that. So you have two groups living together; one's following one set of rules and the other isn't. Example number two, all the Army had to wear helmets all the time, Air Force didn't. We didn't wear helmets unless we were in IPE. So that was that—you all got it easy. And in missile attacks [their] rules of engagement were different [from] ours. We had to shelter in place and remain until we went back into green. Army could move around after they went from red to black. So some people sheltered and the others not, they were walking around [with] different rules. | Multinational intraservice training | Joint ops        | Joint environment education    |
| Describe a time when you worked in a joint military environment. | Combined units are being developed right now. Worked with Army, AF, Navy, civilian, Australian, and British . . .   | Multinational intraservice training | Joint ops        | Joint environment education    |
| What did you experience OTW?                                     | In joint military environment, there are different policies, procedures, and/or weapons.  | Multinational intraservice training | Joint ops        | Joint environment education    |
| What did you experience OTW?                                     | Being on foot and approached by women.  | Threats                             | Language Culture | Cultural education (awareness) |
| Have you had interactions with TCNs? If so, describe.            | Just having TCNs on base working around the entire base.  | Situational awareness               | Language Culture | Cultural education (awareness) |
| What did you experience OTW?                                     | Experiencing uncomfortable culture differences.   | SERE<br>Intel equipment training    | Language Culture | Cultural education (awareness) |

|---|---|----------------------------------|---------------------|--------------------------------|
| What cultural issues were surprising to you?                        | Hired a guy to do waste management—rampant fraud. Fraud is ridiculous out there. It was obvious—the locals were angry because we weren’t going to pay enough.   | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| Describe a time when you were riding in a convoy or being escorted. | In Pakistan, if there are Americans near certain mosques, it just takes one American to flare a riot. You’re told not to go towards mosques, but stupid people do go towards the mosques.   | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What causes problems with the locals?                               | Taking pictures of holy places.   | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What causes problems with the locals?                               | Supporting Israel.  | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What cultural issues were surprising to you?                        | Doctors smoking. Greek physicians. Open Bay forum (even for a pelvic exam).   | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| Have you had interactions with TCNs? If so, describe.               | I was told that staring someone directly in the eyes when you talk to them can be a sign of disrespect. This can cause problems if you are not used to it.  | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What cultural issues were surprising to you?                        | Holding hands (men).  | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What happened while interacting with locals?                        | Taught to leave the women alone.  | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What happened while interacting with locals?                        | During Desert Storm we used to be able to go to Riyadh(?). During prayer time, the women weren’t doing something right and the religious police came up. They (the women and the group they were with) were Brits. They weren’t as “PC” as us and they said something. Things escalated . . . the women got pummeled with sticks. | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |
| What happened while interacting with locals?                        | In Saudi, there is not even an option to talk to the women. But in countries where women can drive, it’s definitely a problem.  | SERE<br>Intel equipment training | Language<br>Culture | Cultural education (awareness) |

Table F.2—Continued

| Question/Topic  | Response   | SME 5                            | SME 6                       | SME 7                          |
|---|--|----------------------------------|-----------------------------|--------------------------------|
| What happened while interacting with locals?                        | Women become uncomfortable. The Army guys who have been gone for a long time, there are a lot of attractive women. "Everything's gone on"—eye-winking to sexual assault.   | SERE<br>Intel equipment training | Language<br>Culture         | Cultural education (awareness) |
| What happened while interacting with locals?                        | Threat in Iraq was pretty extreme. Locals did a bazaar on base. They're really friendly, talking you up, trying to make the sale.  | Recreation travel,<br>nonplayer  | Language<br>Culture         | Cultural education (awareness) |
| What additional training do you feel would be beneficial?           | There was a program for going to Germany. We spent 5 days learning customs, phrases, etc. We went to someplace in the middle of nowhere to use as much German as we could. Order a meal, carry on a conversation. They should do that for Iraq.  | Language                         | Language<br>Culture         | Cultural education (awareness) |
| What cultural issues were surprising to you?                        | Sanitation.  | SERE<br>Intel equipment training | Hygiene                     | Cultural education (awareness) |
| What made you feel as if you were in danger?                        | Our unit was tasked to provide escorts to return to base with loaded cement trucks. Trucks arrived on base empty and were searched and inspected for security, cleared, and we rode with them to the concrete plant, watched them load with concrete, then escorted back to base. Our presence and oversight of this kept the trucks cleared and able to return on base without being re-searched/inspected. | Threats                          | Watch surroundings<br>Intel | Convoy training                |
| What made you feel as if you were in danger?                        | Riding in a convoy at 0300. The convoy approaches a truck that is broken down on the side of the road but facing the opposite direction from the flow of traffic. There is a local that looks like he is changing a tire, yet you notice that none of the tires are flat.  | Tactical skills                  | Watch surroundings<br>Intel | Convoy training                |
| What did you experience OTW?  | Seeing signs for mines when you are in a convoy.   | Tactical skills                  | Watch surroundings<br>Intel | Convoy training                |
| Describe a time when you were riding in a convoy or being escorted. | In the 12 times going to the airport, never had anything happen. Any cars that get close are "directed away" into the ditch. Unarmed and in civilian clothes. We're told to go to the center of the bus and wait (if anything threatening happens). Be ready to take over for the bus driver if he gets incapacitated.   | Situational awareness            | Watch surroundings<br>Intel | Convoy training                |
| How do you travel when on foot?                                     | Even R&R you travel in packs.  | Recreation travel,<br>nonplayer  | Watch surroundings<br>Intel | Convoy training                |

**Table F.2—Continued**

| Question/Topic  | Response   | SME 5            | SME 6          | SME 7           |
|---|--|------------------|----------------|-----------------|
| What made you feel as if you were in danger?                | On a set mission escorting military personnel from Ali Al Salem AB Kuwait to Kuwait City International Airport. Tasked to keep ahead of the busses and make sure no threats exist ahead on the route. There is a truck facing the opposite flow of traffic on the right side of the road. Two security forces personnel with weapons drawn check the vehicle for bombs, persons, etc. A local comes from behind the truck with a crow bar and approaches the 2 SFS personnel in a nonthreatening manner. | Tactical skills  | UOF/ROE        | Convoy training |
| What made you feel as if you were in danger?                | In Iraq, we get mortared all the time. Flak vest, helmet—that’s supposed to protect you. In a vehicle you just pull to the side and pray it don’t hit you.   | Weapons training | Tactics        | Convoy training |
| If you were ambushed, on the road what would you have done? | Try to ride off. If it’s not possible, that’s why we carry a loaded weapon—we’d fight back. We’re not trained specifically for what to do. I had M-9 training for the AF (stand and shoot at a fixed target) and they tried to get me to the range for more extensive familiarization—but I had to go to a remote location after being there for only 4 days.  | Weapons training | Tactics        | Convoy training |
| What made you feel as if you were in danger?                | We had IED scares, mortar attacks at night, tracer fire. At night we’d use NVGs. We got shelled about 5–6 times a week.  | Threats          | Tactics        | Convoy training |
| What made you feel as if you were in danger?                | Not enough protection traveling between Camp Victory and the Green Zone.   | Tactical skills  | Tactics        | Convoy training |
| What made you feel as if you were in danger?                | A truck flipped over carrying Army soldiers.   | Tactical skills  | SABC           | Convoy training |
| What made you feel as if you were in danger?                | While escorting personnel to and from the airport, I was riding with the SF as force protection. We came up to some vehicles on the side of the road with some locals and TCNs. When we got out to check the vehicles, the TCNs started saying how they are America’s friends.   | Threats          | OPSEC          | Convoy training |
| Ever gotten lost in the city? If so, what is helpful?       | We have the technology (cell phones, etc.) and intel people who give us everything we need. Sometimes even have satellite maps of the city and go over routes and rally points. Mission planning.  | Weapons training | OPORD Planning | Convoy training |
| Have you ever felt less prepared than other group members?  | Even if there was a plan for what to do if we were ambushed, you can’t go too far with the plan. 3 buses, 40 people each. The plan can’t be too detailed. You have to react.   | Tactical skills  | OPORD Planning | Convoy training |

Table F.2—Continued

| Question/Topic  | Response  | SME 5           | SME 6                               | SME 7           |
|---|---|-----------------|-------------------------------------|-----------------|
| Describe a time when you were riding in a convoy or being escorted. | The kids always want candy and MREs. "No pork, No pork." A lot of guys would get candy, throw it from trucks. It was windy, sometimes the candy would wind up on the road—kids would go after it, get run over. There were parents who would send the kids up to panhandle—get whatever they could.   | Threats         | Language Culture                    | Convoy training |
| What made you feel as if you were in danger?                        | On my convoy we stopped many times to fix tires and trucks that were breaking down. We would stop in locations I felt unsafe in.  | Tactical skills | Convoy driving Response on the road | Convoy training |
| What made you feel as if you were in danger?                        | I was involved in quite a few convoys from Ali Al Salem to Kuwait City International Airport. I never really felt that my life was in danger, but I did feel uncomfortable twice out of the 8 or 10 convoys that I did. Once when this car kept jumping in the middle of the convoy. When the SET teams cleared the vehicle from the convoy, the vehicle would slow down or speed up and jump in between two other vehicles that were a part of the convoy.   | Tactical skills | Convoy driving Response on the road | Convoy training |
| What made you feel as if you were in danger?                        | Just convoying, it's the luck of the draw how it's going to get hammered.   | Tactical skills | Convoy driving Response on the road | Convoy training |
| Was there training on driving OTW?                                  | No they didn't provide training on driving. That was in the summer of 2003, right after the war ended and nothing was—things were haphazard. There was no training. It says we're going to the Green Zone, there was no training—nothing—you just get in the car (Humvee) and sit there and your Chaplain assistant because you don't have a gun, your Chaplain assistant would be with a gun and then you would be with another Humvee and you would drive as fast as you could and get to the Green Zone. | Tactical skills | Convoy driving Response on the road | Convoy training |
|   | We had to go through a detour because there aren't any street signs, you go by landmarks so the third fork after the fourth right it's kind of confusing but we found our way, we didn't drive too far but we did kind of get lost. We were told if that happened to back track the way we came and radio for better directions or just go back to the starting point.  | Tactical skills | Convoy driving Response on the road | Convoy training |

**Table F.2—Continued**

| Question/Topic  | Response  | SME 5           | SME 6                                  | SME 7           |
|---|---|-----------------|--|-----------------|
| What made you feel as if you were in danger?              | En route to duty location from airport, a vehicle passed our unmarked convoy in Kuwait and then slowed down. Vehicle was then rammed off the road by security personnel. I didn't see this firsthand but was told this by someone who was in the front passenger van.   | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What additional training do you feel would be beneficial? | Even if the speed limit is 140, that doesn't mean you always do that—you should vary your speeds and see if someone is following you.   | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What made you feel as if you were in danger?              | During a convoy, one of the tactical vehicles broke down in an area where we had lost some military members to an IED 2 months prior. Everyone was a little tense trying to get the vehicle strapped to another so it could be pulled the rest of the way. Traffic was stopped coming each way to prevent potential hazards until we were on our way again. | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What additional training do you feel would be beneficial? | Keep spacing, know what to watch for (watching for someone tailing you).  | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What did you experience OTW?                              | Traveling in a convoy.  | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What made you feel as if you were in danger?              | Running a mission as part of a convoy. We don't wait for anything. Red light, we go. That's what the lead truck is doing. If you stop the convoy, you're asking for your death.   | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| Have you had any incidents with the local police?         | Unmarked car put lights on top while following us and attempted to pull us over on highway. We were warned not to stop for unmarked vehicles. He followed us for 15–20 miles and tried to run us off the road. We showed weapons and he backed off.   | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What made you feel as if you were in danger?              | Running a mission as part of a convoy. A situation ensues where the convoy needs to stop traveling. There is immediate danger in the area.  | Tactical skills | Convoy driving<br>Response on the road | Convoy training |
| What made you feel as if you were in danger?              | Every time we went out, it posed as a potential threat. It was our job to provide security for convoys of inbound/outbound troops.  | Tactical skills | Convoy driving<br>Response on the road | Convoy training |

Table F.2—Continued

| Question/Topic   | Response  | SME 5                            | SME 6                                  | SME 7           |
|--|---|----------------------------------|--|-----------------|
| What training have you received for special circumstances? | Defensive driving.  | Tactical skills                  | Convoy driving<br>Response on the road | Convoy training |
| What made you feel as if you were in danger?               | I was involved in quite a few convoys from Ali Al Salem to Kuwait City International Airport. I never really felt that my life was in danger, but I did feel uncomfortable twice out of the 8 or 10 convoys that I did. The other time was when my baggage truck driver got us lost and we almost ended up in Jahra. What made the situation worse was that he was unarmed. | Situational awareness            | Convoy driving<br>Response on the road | Convoy training |
| Ever gotten lost in the city? If so, what is helpful?      | All the driving training you can think of—carry a GPS.  | SERE<br>Intel equipment training | Convoy driving<br>Response on the road | Convoy training |
| Why did you go OTW?  | We left the base to get to the airport. Everyone was loaded onto 2 or 3 buses that were accompanied by SF SUVs (usually about 3). Vehicles were lined up 4 to 5 feet apart and told to “just go.”   | Military travel,<br>nonplayer    | Convoy driving<br>Response on the road | Convoy training |
| What additional training do you feel would be beneficial?  | Shooting experience.  | Weapons training                 | Weapons                                | Combat skills   |
| What additional training do you feel would be beneficial?  | M-16 training.  | Weapons training                 | Weapons                                | Combat skills   |
| What additional training do you feel would be beneficial?  | Weapons familiarization.  | Weapons training                 | Weapons                                | Combat skills   |
| What additional training do you feel would be beneficial?  | 9mm training.   | Weapons training                 | Weapons                                | Combat skills   |
| What additional training do you feel would be beneficial?  | Force protection training for specific areas is very commingled with intel. Someone should be providing that. It requires a lot of effort. Deploying one person at a time To work with different units—it’s hard to get everyone trained up.  | SERE<br>Intel equipment training | Watch surroundings<br>Intel            | Combat skills   |

**Table F.2—Continued**

| Question/Topic   | Response  | SME 5                            | SME 6                              | SME 7         |
|--|---|----------------------------------|------------------------------------|---------------|
| What additional training do you feel would be beneficial?        | Intel training (more focused).  | SERE<br>Intel equipment training | Watch surroundings<br>Intel        | Combat skills |
| What additional training do you feel would be beneficial?        | Combat skills familiarization course. Not a 9–5 thing. Everybody should do this—not just those who need to use it for their job.  | Weapons training                 | Tactics                            | Combat skills |
| Describe a suspicious situation.                                 | If you hear 50 cal shots, or mortar—call it in. If you’re getting fired upon, you might fire back.  | Threats                          | Tactics                            | Combat skills |
| What additional training do you feel would be beneficial?        | Several years ago, one of the participants set up a combat skills familiarization course for the National Guard in Alexandria, VA. He doesn’t know if it still exists. He suggested something similar for everyone, including open-country convoy duty, perhaps on an annual basis (like SERE) and continual retraining.  | SERE<br>Intel equipment training | Tactics                            | Combat skills |
| Have you ever had to deal with inexperience or lack of training? | 1/2 can’t use chem. gear.   | Weapons training                 | Protective skills<br>CBRNE IED/UXO | Combat skills |
| What made you feel as if you were in danger?                     | Mortar fire on base. You hear the “boom” and 5 minutes later sirens go off. There are bunkers to run to, but lots of people just put on their gear, stay in their cot, and cross their fingers . . .  | Threats                          | Protective skills<br>CBRNE IED/UXO | Combat skills |
| What additional training do you feel would be beneficial?        | Chem warfare training isn’t really useful in day-to-day operations.   | SERE<br>Intel equipment training | Protective skills<br>CBRNE IED/UXO | Combat skills |
| Have you ever had to deal with inexperience or lack of training? | I was part of a large team that got on a bus. E-2 for the army, gun on his lap, doesn’t have a magazine in his weapon. Never changed his weapon. Bad guys kill people on the road we’re about to travel on everyday. Dealing with inexperience. Had to get everyone off the bus, put on body armor, get weapons out. But still no one understood what was going on. They just didn’t realize what I was thinking in terms of the level of threat. | Weapons training                 | Joint ops                          | Combat skills |
| What did you learn while OTW?                                    | Have your plates for your vests.  | Weapons training                 | Equipment                          | Combat skills |

Table F.2—Continued

| Question/Topic                               | Response   | SME 5            | SME 6     | SME 7 |
|--|--|------------------|-----------|-------|
| What made you feel as if you were in danger? | People are carrying around gear that they don't know how to use. (Well, they get training every year, but in the field, they wouldn't know how to prioritize it). Smoke appears in the air, and people are worried about putting on the chem. pants. People don't know how to respond. Sometimes they go outside and watch the flares. | Weapons training | Equipment |       |
