ABSTRACT

The Displaced New Orleans Residents Survey (DNORS) is a study of individuals and families who resided in New Orleans, Louisiana, prior to Hurricane Katrina. DNORS assessed the medium-term social, demographic, health, and economic outcomes of this population in the fifth year after Hurricane Katrina struck New Orleans, which occurred on 29 August 2005. Fieldwork for DNORS was conducted in 2009 and 2010. This document provides an overview of DNORS, and serves as a users' guide and codebook for researchers interested in the public use or restricted versions of the DNORS data.

PREFACE

The Displaced New Orleans Residents Survey (DNORS) was funded by three grants from the *Eunice Kennedy Shriver* National Institute of Child Health and Human Development (NICHD) to the RAND Corporation: R01-HD059106, R01-HD059106-S1, and R21-HD57608. Processing of the DNORS data was partially supported by cooperative agreement 5U24HD048404 between NICHD and the Data Sharing for Demographic Research archive in the Inter-University Consortium for Political and Social Research at the University of Michigan, through a subcontract to the RAND Corporation. The DNORS project is grateful to these sponsors for their financial support and especially thanks Rebecca Clark, Program Officer for DNORS at NICHD, for her support and encouragement throughout this project.

A companion document to this user guide describes the DNORS household screener questionnaire and the main interview questionnaire administered to the Adult and Household Respondents:

ACKNOWLEDGMENTS

The design and implementation of the Displaced New Orleans Residents Survey (DNORS) is the result of work by many people.

Narayan Sastry (University of Michigan and RAND Corporation) served as the Director of DNORS. Christine Peterson (RAND Corporation) was the Data Manager, but was also involved in the design and testing of the questionnaire and many other activities. Michael Rendall (University of Maryland and RAND Corporation) was a co-investigator on DNORS who provided valuable input at many stages of the project. Bonnie Ghosh-Dastidar (RAND Corporation) was the DNORS statistician, who provided guidance and advice regarding the sampling design and weighting. Mark VanLandingham (Tulane University and RAND Corporation) and Elizabeth Fussell (Brown University) provided useful input and feedback on several key design issues regarding DNORS. Jesse Gregory (University of Wisconsin) undertook several key tasks for DNORS, such as generating the imputed income estimates. A number of other colleagues at RAND, the University of Michigan, and elsewhere provided input into the questionnaire and study design.

The Survey Research Operations (SRO) group at the University of Michigan's Survey Research Center (SRC) conducted the fieldwork for DNORS. Kirsten Alcser served as the Survey Director for DNORS at SRO and Esther Ullman served as the Senior Project Manager, and the two of them together helped implement the questionnaire, designed and ran the fieldwork operations, and oversaw the SRO data production activities. The project's fieldwork success is due in large part to their considerable dedication, skill, expertise, and optimism, and it was a pleasure to work with both of them. There were many other people in SRO who made significant contributions to DNORS. At the considerable risk of inadvertently omitting an important contributor, we wish to thank the following individuals for their work on the project: Stephanie Chardoul, Rolfe Carlson, Jenny Bandyk, Jim Hagerman, Joel Harvey, Megan Turf, Terry Adams, Stephanie Sullivan, and the field team leaders, trackers, and interviewers.

Finally, DNORS could not have been successfully undertaken without the considerable experience and knowledge that was gained through earlier work on the Displaced New Orleans Residents Pilot Study (DNORPS). This pilot study was internally funded by RAND, with subsequent support provided by the Pew Charitable Trusts through a grant to RAND. Several individuals at RAND were instrumental in launching DNORPS and provided valuable support in the early stages of the project, including Jack Riley, Brent Bradley, and George Penick. Fieldwork for DNORPS was conducted by Research Triangle Institute, under the outstanding leadership of Anne Kenyon.

GLOSSARY

Abbreviation	Definition
AR	Adult Respondent in DNORS, who was randomly selected from among all persons age 18+ years in the pre-Katrina household living there for half-time or more
BMI	Body mass index
BPI	Behavioral problems index
CAPI	Computer assisted personal interviewing
CH1–CH3	Random Child 1–3, who is a child aged <18 years of a female Adult Respondent (including HH/Adult Respondents)
DNORS	Displaced New Orleans Residents Survey
HH/Adult or HHA	Respondent is both the randomly selected Adult Respondent and the Household Respondent
HHR	Household Respondent—person aged 18+ years who was a half-time or greater resident of the pre-Katrina household who knows the most about the pre-Katrina household members
K6	Scale of non-specific psychological distress was used to screen for anxiety and mood disorders in the previous 30 days
PCL	Post-Traumatic Stress Disorder Checklist
PHQ-9	9-item Patient Health Questionnaire used to assess major depression
PSS	Perceived Stress Scale
PTSD	Post-Traumatic Stress Disorder
SRC	Survey Research Center, division of Institute for Social Research (ISR) at the University of Michigan
SRO	Survey Research Operations, a unit within the Survey Research Center at the University of Michigan

1. INTRODUCTION

The Displaced New Orleans Residents Survey (DNORS) is a study of individuals and households who resided in the City of New Orleans, Louisiana, in August 2005, just before Hurricane Katrina struck (on 29 August 2005). Fieldwork for the study was conducted between mid-2009 and mid-2010. The aim of the study was to collect data for analyzing the location, living arrangements, health, and well-being of residents who were displaced by the hurricane. DNORS drew a sample of pre-Katrina dwellings of the city, identified the pre-storm residents of these dwellings, and tracked and interviewed these people wherever they lived at the time of the survey. In particular, DNORS interviewed pre-Katrina residents of New Orleans who had returned to the city as well as residents who had resettled elsewhere.

Protecting Respondent Privacy and Confidentiality of Responses

DNORS was designed to collect data to be used by the broadest possible group of researchers. The study is based at RAND, which is committed to making as much data available to the research community as possible. At the same time, RAND and the project investigators are strongly committed to protecting the privacy of DNORS respondents and the confidentiality of DNORS data. Identification of respondents is a major concern for DNORS and other surveys that collect detailed individual and local area data. No direct identifiers, such as respondents' names and addresses, will ever be released to data users. However, through indirect identification—also known as re-identification or deductive disclosure—it may be possible to determine individual respondents' identities by using combinations of characteristics of individuals and their local areas. The problem may be particularly acute in DNORS because the study site of New Orleans is relatively small, detailed information was collected on individuals and families, and geographic information on the pre- and post-hurricane locations of individuals is of key scientific and policy interest.

DNORS Public Use Data have been processed to minimize the likelihood of indirect identification of respondents while making the maximum amount of data available to the research community. First, the Public Use Data exclude those data fields that may enable identification of survey respondents either through direct identification or through deductive identification. These variables include geographic identifiers, detailed occupation codes, and related variables. Most variables excluded from the Public Use Data will be available in the DNORS Restricted Data. Second, in the Public Use Data we have recoded some variables into broader categories and top-coded income and other variables in order to reduce the risk of indirect identification. RAND and the DNORS project are making available the DNORS Restricted Data to qualified researchers who devise an appropriate data safeguarding plan, obtain an IRB review and approval at the home institution for their research plan and data safeguarding plan, and arrange for their home institution to sign a restricted data use agreement with RAND. Further details about eligibility for obtaining the DNORS Restricted Data and the application process itself are available on the DNORS webpages at RAND: http://www.rand.org/labor/projects/dnors/data/restricted.html.

2. SURVEY OVERVIEW

Survey Description

The Displaced New Orleans Residents Study (DNORS) is a population-based study of residential mobility, health, and the well-being of children and families who lived in New Orleans at the time of Hurricane Katrina.

Hurricane Katrina struck New Orleans, Louisiana, on the morning of August 29, 2005. The effect on the population was devastating: all of 455,000 people in the city were forced to leave and resettle, which some did temporarily and others permanently. The toll from the hurricane was enormous and continues to unfold. Many people had family members or friends who died or were injured, had homes that were severely damaged or destroyed, lost their jobs or businesses, and had their lives severely disrupted. Even though this event occurred almost ten years ago, research on many major topics suffers from a lack of appropriate data and information on the people who lived in New Orleans.

A critical need in assessing the impact of the hurricane and in planning a recovery is to obtain representative data on the whereabouts, status, health, and well-being of people who lived in New Orleans at the time of Hurricane Katrina. The dispersion of residents makes this an extremely challenging undertaking. However, the value of these data for researchers, policymakers, and the public is extraordinarily high.

Analyses of DNORS data are expected to make a number of important contributions, including:

- Providing valuable information on the whereabouts, health, and well-being of children and families who lived in New Orleans at the time of Hurricane Katrina, including information on short- and medium-term outcomes over a period of four years following the hurricane.

- Providing information for local community groups in New Orleans about the number and type of residents who lived in the city before the storm and who have returned, and the number who have not returned but are interested in doing so. The study will also provide specific information on the reasons why people who want to return have not done so yet.

- Beyond merely providing descriptive summaries, the survey data will support detailed analyses of the causes and consequences of outcomes related to Hurricane Katrina. For instance, the study will provide detailed information for examining disparities in well-being by race/ethnicity and socioeconomic status.

- Findings from the survey will provide valuable information for policy makers, researchers, and the public interested in understanding the effects of Hurricane Katrina on the population of New Orleans. In particular, results will help describe and forecast the repopulation of New Orleans by displaced residents. Former residents' decisions about whether to return to New Orleans or to resettle elsewhere will be a crucial factor determining the future size and composition of the city's population.

Study Area and Population

The DNORS sample frame covers the complete area of Orleans Parish, Louisiana, which coincides exactly with the boundaries for the City of New Orleans. The study population consisted of families living in Orleans Parish, Louisiana, in August 2005, immediately prior to

any residential dislocation caused by Hurricane Katrina, and who were still alive and could be located either by telephone anywhere in the United States, or by face-to-face interviewing, as necessary, in Orleans Parish.

DNORS Sample Design

The sampling frame of housing units was created in three stages:

- Stage 1: Selection of Primary Sampling Units (PSUs)

  The primary sampling unit for DNORS comprised of a single county—namely, Orleans Parish Louisiana—which, by design, was selected with certainty.

- Stage 2: Selection of Secondary Sampling Units (SSUs)

  Each selected PSU consists of a large number of Census Blocks. These Census Blocks were grouped into clusters with a designated minimum population and a systematic random sample of clusters was drawn. The selected clusters are called Secondary Sampling Units (SSU) or segments. A total of 150 segments were selected to represent Orleans Parish. These segments were created and selected using data from the 2000 Decennial Census on the number of housing units in Census Blocks.

- Stage 3: Selection of Individual Addresses/Housing Units

  Prior to data collection, field interviewers listed each address on each of the selected blocks within each of the selected segments, and SRC/SRO sampling statisticians selected addresses systematically from a random start from among all of the listed addresses within each segment. From the study sample consisting of the listed addresses, or housing units, interviews would be attempted with members of a household who lived at each of the addresses in August 2005, at the time of Hurricane Katrina. Interviews were primarily conducted by telephone using telephone numbers that were obtained prior to the start of data collection for as many addresses as possible using a variety of resources.

Listing of Area Probability Sample

To create the area probability sampling frame for the DNORS study, SRC/SRO interviewers carried out the listing activity during the preproduction phase of the project. After a brief pilot test (under separate funding) to assess the difficulty and complexity of listing in a hurricane ravaged area of the country, listing materials were finalized and local interviewers were recruited, hired, and trained to complete the listing for production data collection. Addresses from the U.S. Postal Service (USPS) Delivery Sequence File (DSF) were obtained from a vendor and were loaded into the electronic listing program for display on computer tablets. The USPS address list formed the basis for obtaining an enhanced, complete listing of all addresses in the selected segment blocks. Interviewers/listers updated this postal list of addresses based on observations conducted during the systematic on-the-ground address listing procedure. Due to the Hurricane damage inflicted in New Orleans, substantial effort was mounted to account for and identify housing units that existed prior to the event of Hurricane Katrina and were destroyed or demolished.

A total of 150 segments were planned for selection but only 149 were actually used because one segment was ruled ineligible due to being a military base. Among the 149 sampled

segments, ten were “scratch” segments—that is, segments with ten or fewer USPS DSF lines geo-coded to a block in the segment. For these segments, few or no addresses were obtained from the DSF. Interviewers collected all addresses while walking the blocks in the prescribed manner. These addresses were added to the address data base prior to sample selection.

Segment Level Observations

In addition to listing each housing unit in each segment, the interviewers recorded segment-level observations, including types of housing structures in the segment, estimated proportion of vacant lots, and descriptions of public buildings on or near the segment. The Segment Observations Form is included in Appendix R of this document. The Segment Observations data are part of the DNORS Public Use Data and a variable codebook for that file is included in Appendix T of this document.

The segment observation data were used for multiple purposes. For example, information about the number of vacant dwellings in a segment was used to develop interviewer work assignments. A high level of vacancy in a given segment was a signal that the segment would require more tracking efforts by an interviewer. Thus, at least a portion of sampled lines from segments with a high level of vacancy was released to the field first in order to get a head start on location/tracking of households that had moved. Knowledge of public buildings would alert the interviewer to possible sources of information about the neighborhood.

Segment-level observations were supplemented with observations of individual housing units, which was of special importance for areas that suffered the effects of the hurricane. The housing unit observations covered type of housing structure, occupancy, barriers to access, type and extent of damage, and additional housing units at the address (e.g., house trailers). Such housing unit observations were attempted for the selected sample and were largely completed by the start of data collection. The Housing Unit Observations questionnaire is presented in Appendix S of this document. The Housing Unit Observations data is part of the Public Use Data and a variable codebook for that file is presented in Appendix U of this document.

Sample Size

The target sample size was determined to be 7,730 addresses, based on estimates and assumptions of the following factors: (a) vacancy rate prior to the hurricane, (b) expected ability to locate selected households, (c) screener/household listing cooperation rate, (d) eligibility rate, and (e) response rate among eligible households and selected persons. Due to rounding, the actual selected sample size was 7,728 addresses which were randomly chosen. This sample included 20 percent of sample addresses to be held in reserve. An expected base sample of 5,522 housing units was estimated to be required to reach the study goals of approximately 1,240 completed household interviews. Fourteen (14) replicates in the approximate size of 550 housing units were created from the entire sample, including the reserve sample, and were combined as needed for release to the field during data collection. A total of 6,078 sample addresses were delivered to the field during the data collection period.

Managing Sample: Responsive Design

The DNORS sample was comprised of systematic sample groups (sample replicates) designed to retain representativeness at the sample group level. Sample replicates were released as

needed through the field period to focus interviewer effort and to make sure that difficult cases were worked thoroughly before new sample was released. In addition to this first phase approach to managing the sample, a second phase approach, involving sub-sampling (i.e., removal from the field) of released sample cases, was also implemented.

The major challenge for data collection was expected to be locating persons who had left New Orleans after Hurricane Katrina. A two-phase sampling for non-response was implemented to remove a sub-sample of those persons living in sample households who were outstanding non-locatable cases. This approach was implemented to reduce effort (and costs) associated with continuing to do extensive tracking on all remaining cases. The process retained the representative nature of the overall sample and was accounted for in the development of sample weights at the end of the study.

The process of sub-sampling outstanding hard-to-locate cases was carefully coordinated with the timing of sample releases to make sure that all sample lines were evenly worked before implementing the sub-sampling procedures. Sample lines were removed on a release-by-release basis. The first sub-sampling took place on March 10, 2010, and selected from among the outstanding cases in the first sample release from June 30, 2009. The eligible cases for sub-sampling had to meet two criteria: (1) they were still in "locating" status and (2) they had been worked methodically by field staff.

Table 2.1 shows the counts and timing of the release of sample lines to the field. The table also shows the number of cases eligible for the second-phase subsampling, along with the number of cases that were retained in and removed from the field and the date the selection was implemented.

Table 2.1. DNORS Original Releases, Phase 2 Sub-Sampling Counts and Dates

Original Sample Release				Second Phase Sub-Sampling			
Release	**Replicates**	**Date**	**Count**	**In Locating**	**Retained**	**Removed**	**Date**
1	1,3,4,5,8,10,11,13	6/30/2009	4,414	2,014	961	1,053	3/10/2010
2–3 (Batch 1)	2,12,14	11/23/2009	540	199	112	87	4/05/2010
2–3 (Batch 2)	2,12,14	12/15/2010	549	189	88	101	4/05/2010
2–3 (Batch 3)	2,12,14	1/18/2010	567	319	166	153	4/05/2010
4–6	6,7,9	Not released	1,658	N/A	N/A	N/A	N/A
Total sample lines			**7,728**	**2,721**	**1,327**	**1,394**	

Note: Total sample lines do not include 8 lines added during production due to Type-II updating.

Note that removal dates in the table are the dates on which the "removed" cases were coded as final non-interviews. This coding-out of cases occurred a few days after these cases were selected and deactivated, in order to allow time for interviewer activity to date to be recorded and cases reclassified. Although the removal and retention probabilities among the "locating" cases were 0.5, the reclassification of cases during this several day period resulted in some cases being moved out of "locating status," including some to other final statuses, so that the numbers of cases in the "retained" and "removed" categories ended up being unequal.

DNORS Respondents

DNORS had two types of respondents: the randomly selected Adult Respondent (AR) and the Household Respondent (HHR). The respondents were drawn from the list of household members who were living at the selected address in August 2005, at the time of Hurricane

Katrina, and who were aged 18 years or older at the time of the first successful contact with the household when the screener interview was completed.

The AR was randomly selected from the list of those living adult pre-Katrina household members residing in the U.S. if there was more than one such household member. The AR was administered the individual interview section of the main interview but was not asked to provide detailed information on the individual pre-Katrina household members. Female ARs with children under the age of 18 years were additionally administered the Child Module, which collected information on up to three of her children under the age of 18 years.

The HHR was randomly selected from the list of those living adult pre-Katrina household members residing in the U.S. who were said to know the most about the pre-Katrina household members if there was more than one such household member. Because the AR was selected first, the HHR could be the same person that was selected as the AR. The HHR was administered the household roster section that collected detailed information on each pre-Katrina household member. The HHR was also asked to complete the individual interview section.

DNORS Questionnaire Modules

The DNORS questionnaires included a screener and a main interview that produced three types of interviews: an Adult Respondent (AR) interview; a Household Respondent (HHR) interview; and a combined Household and Adult Respondent (HHR/AR) interview where one person was selected to complete both the AR and HHR interview components. In addition, the main interview contained a special Child Module for female adult respondents with children under the age of 18 years.

Screener Interview

Within each of the selected households, interviewers would first collect a household listing of people who were living at the sampled address at the time of Hurricane Katrina in August 2005. From this list, the screener interview determined who was eligible to be interviewed for the main interview that consisted of a pre-Katrina household roster and an individual interview.

Main Interview

The main interview included three components: first, a pre-Katrina household roster; second, an individual interview, and, third, a Child Module.

Pre-Katrina Household Roster. The pre-Katrina household roster was completed by the HHR. Based on the household listing obtained in the Screener Interview, the list of pre-Katrina household members was augmented by the HHR when the HHR if additional members were recalled during the main interview. The roster (Section C of the Main Interview) asked detailed questions about each pre-Katrina household member ascertaining current status and location as well as residential changes immediately following Katrina plus some basic demographic information. Some detailed information, such as job-related questions, was only asked of the respondent. When the AR was not also the HHR, the AR was asked the same set of detailed questions but only about himself/herself and was not asked about any other pre-Katrina household members.

Individual Interview. The individual interview (Sections D-M of the Main interview) was administered to the AR and the HHR, if they were different individuals. These questions covered traumatic experiences, health, mental illness, PTSD, depression, and perceived stress plus household income.

Child Module. Female AR with children under the age of 18 were administered a series of questions for up to three children (randomly selected if she had more than 3 children under age 18) covering the child's father's involvement, and the child's background characteristics, health and behavior problems (if any). For selected children who were in the pre-Katrina household roster, questions in the Child Module that were the same as those asked in the roster section were not re-asked.

3. DNORS QUESTIONNAIRES

General Principles

The development of the DNORS questionnaires was based on five general principles. First, questions and modules were drawn from other recent surveys, in order to facilitate comparisons with other samples and with nationally-representative data. For instance, DNORS also used validated mental health instruments to assess conditions such as depression, serious mental illness, and post-traumatic stress disorder as accurately as possible. Such questions and modules generally have been carefully evaluated and well-tested. Second, we sought to ask questions of the individuals who were best able to answer, based on their age, knowledge, and situation. For example, detailed information about children's behavior and well-being was only obtained from the children's mothers and only knowledgeable individuals were asked to provide proxy reports on other household members. Third, the questionnaires were designed to collect accurate data with the least burden to respondents. Thus, for example, addresses reported by the respondent were preloaded as possible responses for subsequent questions about place of residence. Fourth, the questions and response categories had to be understandable to all possible respondents, which included individuals who were illiterate, had little schooling, or limited comprehension ability. Although the questionnaires were interviewer-administered over the telephone or in-person, they were carefully checked for the ease with which respondents would be able to understand the questions and responses. Finally, questionnaire skip-patterns and randomization routines were carefully checked and extensively tested to make sure that worked as intended.

Description of DNORS Questionnaire Sections

Table 3.1 summarizes the DNORS questionnaire modules and sections and indicates which DNORS respondent completed each section.

Table 3.1. DNORS Questionnaire Modules and Sections by Respondent Type

Questionnaire Module/Section	Respondent
Screener Interview	Any knowledgeable pre-Katrina resident of the sampled dwelling aged 18+ years
Main Interview	
A. Introduction and Consent	HHR, HHR/AR, AR
B. Household information	HHR, HHR/AR, AR
C. Roster of pre-Katrina household members	
Questions about self	HHR, HHR/AR, AR
Questions about other household members	HHR & HHR/AR
Child Module (sub-sections CA–CE)	Female HHR/AR or AR with 1+ children aged <18 years at time of interview
D. Traumatic experiences and losses	HHR, HHR/AR, AR
F. Health	HHR, HHR/AR, AR
H. Mental illness scale	HHR, HHR/AR, AR
L. Post-traumatic stress disorder	HHR, HHR/AR, AR
G. Depression	HHR, HHR/AR, AR
J. Perceived stress	HHR, HHR/AR, AR
M. Household income	HHR, HHR/AR, AR
N. Contact information	HHR, HHR/AR, AR

Note: HHR is Household Respondent; AR is the Adult Respondent; and HHR/AR is the combined Household and Adult Respondent.

A description of the development and detailed content of the DNORS questionnaire is available in the following document:

> Sastry, Narayan, and Christine E. Peterson. 2015. *The Displaced New Orleans Residents Survey Questionnaire*, Labor and Population Program, RAND Corporation.

Additional background information that is relevant to how the DNORS interviewers were trained to administer the questionnaire with respondents is available in the following documents:

> Sastry, Narayan, and Christine E. Peterson. 2015. *The Displaced New Orleans Residents Survey Questionnaire Interviewer Manual*. Labor and Population Program, RAND Corporation.

Screener Interview

The Screener Interview obtained a listing of pre-Katrina household residents for the sampled New Orleans address after identifying a pre-Katrina resident who was eligible for the Screener Interview. The Screener Interview selected the Household and Adult respondents for each dwelling, and then collected contact information for the selected respondents and the screener respondent.

Main Interview Sections

Below we provide a summary of the contents of each section of the Main Interview administered to the HHR, AR, and HHR/AR. Note that Sections D–M only collected information from respondents about their own status, and did not collect information about any other pre-Katrina household members.

A. *Introduction and Consent*. This section confirmed the current age of the respondent as being 18 years or older, requested the respondent's consent to be interviewed, and confirmed the respondent's address in August 2005, just before Katrina.

B. *Household Information*. This section asked about the type of dwelling and dwelling ownership in August 2005, the current address at the time of the interview, and a general question about the current household size and current members who were not in the household in August 2005.

C. *Pre-Katrina Household Roster*. This section collected detailed information on all individuals living at the Katrina address in August 2005. It was administered only to the HHR and to the proxy HHR for the callback cases. However, all respondents—including Adult Respondents who were not the HHR—were asked to verify the screener listing and correct any errors. Information was collected on pre-Katrina residents who had since passed away as well as on those still living. Information on the deceased included gender, relationship to the respondent, date of birth, age at the time of Katrina, date of death, age at death, residence at death, country of birth, race/ethnicity, completed education, and marital and work status in August 2005. Information collected on those currently living included age, gender, relationship to respondent, current location, location one year ago, date returned to New Orleans after Katrina, date permanently left New Orleans if not living there now, country of birth, race/ethnicity, marital status now and at Katrina, age and gender of children

ever born/adopted and their location at Katrina, completed education, recent education for those age 5–17 years, employment status now and at Katrina with detailed questions about current/most recent job asked of the respondent only, parental location at Katrina, and general health status currently and at Katrina.

Child Module (Sections CA–CE). This section was administered only to female ARs with children who were under the age of 18 years. From a listing of all the female AR's children under age 18 years, up to three were selected randomly for detailed questions. Information was collected about the location of the child's father now and at Katrina. For children not in the pre-Katrina roster, the same information was collected as that in the roster. The module collected information on specific child health issues and recent visits to health providers, plus information on child behavioral problems using questions from the Behavior Problems Index (BPI).

D. *Traumatic Experiences and Losses*. This section collected information on the respondent's traumatic experiences relative to Katrina (e.g., personal injury, injury to others) and on financial losses suffered due to Katrina.

F. *Health*. This section collected information on a variety of chronic health issues plus self-reported height and weight.

H. *Mental Illness Scale*. This section contained questions related to the K6 mental illness scale, which asked respondents to rate how often they experienced various feelings associated with depression and anxiety over the past 30 days.

L. *Post-Traumatic Stress Disorder*. This section contained questions from the Post-Traumatic Stress Disorder Checklist (PCL). Respondents were asked about psychological problems or complaints that they experienced in the past month because of Hurricane Katrina.

G. *Depression*. This section contained questions from the nine-item Patient Health Questionnaire (PHQ-9), which asks about symptoms associated with major depression and whether respondents had experienced these symptoms in the past 30 days. These symptoms include feeling down, having trouble sleeping, and having little energy.

J. *Perceived Stress*. This section contained questions from the four-item Perceived Stress Scale (PSS-4), which asks respondents about their experience of stress in the past month, such as their inability to control things in their lives.

M. *Household Income*. This section asked about total household income in the 12 months prior to the interview and in the 12 months prior to Katrina. For those who could not provide a specific amount, income bracket questions were used.

N. *Contact Information*. This section collected basic re-contact information on the respondent.

4. DNORS FIELDWORK PROCEDURES AND RESULTS

A considerable amount of the fieldwork effort in DNORS was devoted to tracking sample households and screening and selecting household and adult respondents. We provide an overview of these efforts and of the DNORS fieldwork results.

Field Interviewing Staff

Thirteen interviewers based in New Orleans were hired and trained at the beginning of the project. Initially these interviewers were trained to conduct the listing of housing units in the DNORS sample segments that created the sample frame of DNORS-eligible dwellings. These interviewers also received basic training in general interviewing techniques to help them work "in the field" and to use SRC's electronic systems to document their work hours time and expenses. Immediately prior to the start of field production interviewing, these interviewers completed their training in general interviewing techniques as well as the DNORS study-specific training.

Eight experienced interviewers from the SRC national field interviewing team also worked on the DNORS telephone interviewing component and six experienced interviewers formed the Internet tracking team. An additional five experienced interviewers were trained on the DNORS screener and face-to-face tracking and were staffed as travelers to assist with face-to-face tracking during production.

Throughout the data collection period, the field supervisors monitored interviewers' performance and handled terminations and reductions in force (e.g., during the last weeks of the study). Four of the local interviewers remained on staff until the end of production.

Fieldwork

Fieldwork for DNORS took place between June 2009 and April 2010 and was carried out by the Survey Research Operations (SRO) group at the University of Michigan's Survey Research Center (SRC). The interviewer manual, referenced in Chapter 3, describes many of the field procedures.

Locating Sample Households in DNORS

Tracking Procedures

DNORS employed a two-step tracking process. The first step was to find the names of the persons who lived at the sample address in 2005, while the second step was to find where those persons were living at the time of data collection. For Main Interview sample lines, the process was somewhat easier as the names of the respondents were known from the screening process so only their current location had to be determined.

Reflecting the high percentage of DNORS sample expected to require tracking, a significant amount of effort was put into the planning and execution of protocols to identify and locate the pre-Katrina residents of the sampled New Orleans addresses, both before and during the production phase.

Several aspects of the tracking process were designed to fit the unique needs of the DNORS project: the use of an upgraded WebLog application to record and relay the new information

from the Internet trackers (IT) to the field tracker or telephone interviewer; a detailed segment rotation plan to facilitate information flow; a multi-role tracking effort which allowed immediate interchange of information between Internet staff, telephone interviewers, and face-to-face staff; and a phased Internet tracking protocol which enabled easily-located leads to be sent to the field as quickly as possible while also ensuring that all tracking lines were worked thoroughly. Details of these enhancements are described below.

Preproduction Tracking Efforts

Several tracking steps were taken prior to the release of the sample, both centrally in the Ann Arbor office and locally in the New Orleans sample segments. First, the list of sample addresses was submitted to Acxiom Insight (12303 Airport Way, Suite 300, Broomfield, CO 80021), a proprietary, web-based automated data base portal, to get updated, standardized address and telephone information for these addresses. Second, the New Orleans interviewing staff began face-to-face tracking during the preproduction period and reported names and telephone numbers of pre-Katrina residents that they were able to confirm.

Immediately prior to the start of field data collection, pre-notification letters were mailed to the confirmed pre-Katrina residents or the unnamed household members of the selected addresses to explain the importance of the study and to encourage the recipients to call the toll-free telephone number of the Ann Arbor office to schedule an appointment or to ask questions. When letters were returned as undeliverable, this information was entered into the sample management system together with any new information (such as forwarding address information) obtained from the U.S. Postal Service.

Beyond the initial batch search for updated information on the selected addresses prior to mailing out the pre-notification letters, the tracking model for the DNORS study was primarily based on the work conducted by decentralized Internet trackers and local interviewers.

Decentralized Tracking Efforts to Locate Respondents

Extensive tracking was done by the field staff by telephone, face-to-face in the field, and using Internet sources. Interviewers in the New Orleans area were recruited to this project and trained in face-to-face tracking techniques; they were supervised by the field Production Manager with the assistance of the Team Leaders and the face-to-face work group leader. The team of telephone interviewers was from SRC's national interviewer pool and was supervised by the Production Manager with assistance of Team Leaders. The team of interviewers responsible for Internet tracking was also from the SRC pool and was supervised by the Production Manager with the assistance of the Tracking Coordinator.

Tracking Documentation in Sample Management Systems

Two systems were used for documenting tracking on the DNORS: SurveyTrak and WebLog. The study sample in the SurveyTrak sample management system was assigned exclusively to the telephone and face-to-face interviewers. From SurveyTrak, the field staff could record results of tracking efforts and also access the survey instrument to conduct interviews. The Internet trackers had sample assigned to them in the WebLog system, but it was used for tracking only—i.e. they were not able to conduct screening or main interviews in this system.

The Production Manager, in collaboration with members of the Ann Arbor management and computer systems programming team members, added enhancements to the WebLog system

that provided the Internet trackers full access to the documentation of tracking work done by the telephone and face-to-face staff. There was one sample line created in each system for each sample address, and the interface between them allowed the Internet trackers to view all of the SurveyTrak records, enabling them to see new leads that had been entered, while the telephone and face-to-face staff were able to download new information generated directly from WebLog, simplifying the information transfer. Field staff was notified of the availability of new leads via email messages that were generated automatically by the WebLog system. Close monitoring of leads was required on the part of the Team Leaders and the Tracking Coordinator to ensure prompt follow-up.

Flow of Tracking Sample

For each sample release, the 149 segments were placed into a rotating schedule with 50 segments in each primary group so that each was worked first by the telephone interviewers, then by the face-to-face staff in New Orleans, and finally by the Internet trackers. Pre-notification letters were also sent out according to this rotation plan in three batches.

For Release 1, the team leaders set up a rotation schedule which included two weeks of work for groups of 8–12 segments. At the end of 20 weeks, the rotation had been completed for all segments and was repeated.

The telephone staff worked the segments first so that they could confirm as many of the preloaded telephone numbers as possible and eliminate the need for face-to-face visits to these addresses. Next the face-to-face interviewers called at the addresses that had not been confirmed to complete screening when possible and gather leads for the Internet trackers if pre-Katrina residents were no longer in the household. Finally, each segment was worked by the Internet tracking team which was able to take advantage of any leads generated by the telephone and face-to-face staff.

For Releases 2 and 3, which contained a smaller amount of sample, the rotation schedule was divided into 50 segments for each of three periods. During this time, face-to-face trackers worked all new sample as well as remaining Release 1 sample on their segment visits. Internet trackers completed phase one and two of the prescribed Internet search strategy (see below) or the new sample, and telephone interviewers worked all open sample.

Telephone Tracking

Sample lines that had a preloaded telephone number as a result of the initial batch search submitted to Acxiom Insight were first assigned to a telephone interviewer for contact attempts. If the telephone informant at the listed number was not pre-Katrina resident of the sample address, the telephone interviewer asked the informant for information about the pre-Katrina residents or others who might be able to provide this information. All leads developed from these calls were documented in SurveyTrak.

Face-to-Face Tracking

Sample lines with no preloaded telephone number or those for which the preloaded telephone number proved not to be for a pre-Katrina resident were assigned to face-to-face trackers. Field team members in New Orleans gathered information from local informants and provided these leads to the Internet trackers for use in filtering search results. The efforts of the New Orleans

interviewers were augmented by experienced face-to-face trackers from the national pool who traveled to New Orleans for tracking on Releases 2 and 3.

The face-to-face trackers were equipped with paper tracking pads that outlined the questions to ask informants and provided a way to record the information, as well as respondent information such a pre-contact letters and brochures. They were authorized to offer a "finder's fee" to informants who might be able to provide contact information for pre-Katrina residents; the payment was made to the informants only after contact was made with the pre-Katrina residents. A minimum of two segment visits was made to each segment in an effort to locate pre-Katrina residents.

Tracking Resources

Electronic searches were conducted by the Internet trackers who were specially trained in relevant search techniques and who were given a license to search the primary data base under contract between the SRC and the data base source. The primary electronic data base/source under contract for the DNORS study was Accurint Government, a product of LexisNexis. Secondarily, the Internet trackers also used Acxiom InsightCollect 3X. In addition, public data bases were used, the most useful of which were the New Orleans property databases.

There were four main sources of information used in Internet tracking: Accurint, Acxiom, the City of New Orleans Property Viewer (http://cno-gisweb02.cityofno.com/Propertyviewer/), and the Orleans Parish Assessor's Office (http://nolaassessor.com/). Of these, Accurint was the primary resource for trackers and was the predominant source listed for the completed tracking lines. Completed tracking lines were those with a known and final disposition. Most frequently, this was location of living pre-Katrina residents, but it also included locating residents who were now deceased or incarcerated, and final confirmed determination that the property was vacant in 2005.

Although the property databases were useful for identifying property owners in 2005 or owners of rental property who might be able to provide useful information, they were rarely cited by trackers as the primary source for completed lines as they did not include telephone numbers. Because the DNORS was a telephone study and because the most efficient, least costly mode of contact is by telephone, Internet trackers attempted to find a working telephone number for the pre-Katrina residents whenever possible.

There was one additional tracking source that was used by an assigned member of the tracking team—the last remaining print copy for sale of the 2005 Polk City Directory for New Orleans. Because manual research in the book was time consuming, it was used primarily for difficult cases, specifically (residents of) apartment buildings or complexes which are frequently difficult to track. In addition, the directory was used for segments identified as having a high percentage of residents of Vietnamese heritage to make sure that this group was represented in the sample. Using the names of pre-Katrina residents found in the directory, the trackers could then use the Internet to conduct searches for current location and telephone number. As a secondary source of information that led to locating residents, it was very helpful.

The Phased Internet Search Strategy

Because some respondent telephone numbers were relatively easy to find, the Internet searches were conducted in two phases. This allowed all of the Phase 1 telephone numbers to be relayed to the field as quickly as possible so that the telephone interviewers could work on

these lines while the Internet trackers returned to the lines still in tracking for the more advanced Phase 2 searches.

Phase 1 consisted of basic searches in Accurint along with searches of one or two property databases as needed. Phase 2 consisted of basic searches in Acxiom and more complex and time-consuming searches in Accurint, including "relative searches" and "neighbor searches." The checklists used by the IT for each phase are illustrated in Tables 4.1 and 4.2.

Table 4.1. DNORS Phase 1 Internet Tracking

Step	Description
1. Accurint address search	The tracker used the sample address to search for pre-Katrina residents
2. Accurint search of pre-Katrina residents	If named pre-Katrina residents were found, the tracker filtered by the name or Social Security number of the residents to find likely current location
3. Acxiom search of people by address	If no current location was found in Accurint, the tracker filtered the Acxiom database for current location
4. Search for current telephone number	Using the information from Steps 1–3, the tracker used the Accurint database to search for a current telephone number
5. Property database search	If no pre-Katrina resident was identified from the first steps, tracker consulted one of the two New Orleans property databases (city and county) to find the owner's name and then repeated Step 4 to search for a telephone number

The Internet trackers completed the Phase 1 searches in sequence, stopping if they found potential contact information (a "lead") to be pursued by telephone or a face-to-face visit. If no leads were found during Phase 1, the tracker moved to the next tracking line for Phase 1 tracking, recording the completion of the first phase in the WebLog application. After Phase 1 searches had been completed for all sample lines, the Internet trackers returned to the remaining tracking lines to conduct the Phase 2 searches.

Table 4.2. DNORS Phase 2 Internet Tracking

Step	Description
1. Relatives	A search for relatives of the identified pre-Katrina residents was conducted; resulting telephone numbers were called to confirm the pre-Katrina residence and to ask relatives for contact information
2. Neighbors	The procedure in Step 1 was followed for current and pre-Katrina neighbors as needed
3. Acxiom fetch	A "Fetch" search was conducted in Acxiom, searching databases including professional licenses, business telephones, and court records
4. Acxiom People	If no pre-Katrina residents were identified in previous steps, a search of this alternative Acxiom database was conducted, filtering by pre-Katrina address
5. Melissa data	This free database was searched for current location and telephone numbers
6. SSI Death Index	For named pre-Katrina residents with no current location, the Social Security Death Index was searched (death records were also obtained through the Accurint and Acxiom searches)
7. Katrina victims	The Katrina victims website was checked for individuals with no other leads

If the tracker was not able to locate the named pre-Katrina resident after this process, they were also allowed to perform a Google search for the name, particularly if it was an uncommon name that would be expected to return a limited number of results. This was not a required step, but was occasionally useful.

There were a total of 9,317 leads generated in WebLog with 11,329 contact attempts made on these leads. As seen in Table 4.3, Accurint proved to be the most useful source of information for successfully locating the DNORS respondents (n=1,090), while the information received from Acxiom was next most productive (n=111). The primary data source is the source listed by the Internet tracker for the information which led to the resolution of the tracking case. There is only one complete lead in WebLog for each located sample line.

Table 4.3. Primary Data Sources for Located pre-Katrina Residents

Source	Number of Leads
Accurint	1,090
Acxiom	111
Other	70
Relative	23
Respondent	5
Google	3
Total	**1,302**

Accurint was also the most used source for incomplete leads (or "dead ends") in WebLog, as shown in Table 4.4. However, there could be and frequently was more than one dead end per sample line as tracking leads that had been exhausted were coded as dead ends.

Table 4.4. Primary Data Sources for Incomplete Leads

Source	Number of Leads
Accurint	6,064
Acxiom	1,354
Other	298
Relative	38
Respondent	7
Google	63
Neighbor	13
Polk Directory	36
Property sites	90
Face-to-face leads	30
Fetch searches	22
Total	**8,015**

"*Respondent*" in these tables refers to occasions when the pre-Katrina residents called the toll-free number on a line that was in tracking because they received a letter, a "Sorry I Missed You" card, or other communication about the study. The initial preproduction batch search indicated that a sample line that had been placed in tracking was later found to have had a correct telephone number preloaded with data from the preproduction tracking effort. This happened if the telephone number was temporarily disconnected or the interviewer had "misdialed" the number. "*Other*" includes free Internet sites that trackers were allowed to use but which were not on the prescribed list, as well as situations where trackers failed to designate a source in the note field as instructed.

Callback or Non-Response Follow-Up Study

One of the unique features of the DNORS study was collecting information from the most knowledgeable household member about others who were part of that household. More than

one “most knowledgeable” person could be identified. For the original selection of a household respondent, an algorithm selected one person from the list. Information was stored about who else was identified as a knowledgeable individual. After the end of the data collection period, if the selected respondent had not completed an interview, one of these other eligible people was asked to complete a replacement interview. This data collection was completed as a separate callback or non-response study.

Decision rules were created to determine who should qualify as replacement for the originally selected respondent:

1. Select the Screener Respondent if this person is on the list of knowledgeable individuals and has not already been selected as HHR or AR.
2. Otherwise, select the AR-only respondent if this person is on the list of knowledgeable individuals and has already completed the Adult Interview.
3. Otherwise, randomly select another person from the remaining list of knowledgeable individuals who are co-residing with the Screener Respondent.
4. Otherwise, randomly select another person from the remaining list of knowledgeable individuals who are co-residing with the AR.
5. Otherwise, randomly select another person from the remaining list of knowledgeable individuals who are not co-resident with either the Screener or Adult Respondent.

Note that contact information was not collected during the main data collection for those members of the household who were not selected to do a Main Interview. Therefore, without the knowledge of co-residential status, respondents from Categories 3 or 4 were not included as alternate respondents for the non-response follow-up study.

At the end of data collection in May 2010, eighty-one (81) HH and HHA sample lines were reviewed for which no Main Interview had been completed—either because the line was in tracking or there was a refusal for the case. Household data collected in the Screener Interview was reviewed for each line to determine if there were other knowledgeable people listed with whom an interview could be attempted, following the order listed above. A total of 58 respondents were identified for the non-response study based on these criteria. A separate interview project was established and lines created for this sample. In addition, pre-loaded information was generated to include information about the proxy HHR. For approximately one month following the end of the main data collection a small group of interviewers attempted to contact and complete interviews with this group of proxy HHRs. A total of 35 proxy HHR interviews were completed, with 17 respondents selected through Rule 1, 13 through Rule 2, and 5 through Rule 5. These proxy HHRs were given the full main interview, including the individual interview Sections D–M.

The Interview Process

DNORS was a computer-assisted personal interview (CAPI) that was conducted by interviewers who used a laptop computer. The primary mode of interview was telephone. Face-to-face interviews were permitted if the respondent had no telephone, if the respondent specifically requested an in-person interview, or if during face-to-face tracking it was determined that for scheduling ease it would be best to conduct the interview right at that time. The interview was launched through an electronic sample management system (SurveyTrak), through which interviewers were able to document all efforts made to obtain an interview with selected respondents, including efforts that did not result in a completed interview. At the end of each

day, interviewers electronically contacted SRO headquarters in Ann Arbor to send what was collected that day and to receive any sample or software updates.

After determining if any member of the pre-Katrina household was living at the original sampled address, a screener interview was done. The screener collected information on all residents living at the sampled address in August 2005 to determine who was eligible for the main interview and then selected a random Adult Respondent from among the eligible respondents. Next, from among those identified by the screener respondent as "most knowledgeable about the household and family affairs," a Household Respondent was selected (at random, if there was more than one such person mentioned). Contact information was collected in order to locate these selected respondents who were not in the current household and to verify contact information for selected respondents in the current household who were not available for interview at that time. Selected respondents who were present at the time of the screener interview were than asked to be interviewed immediately or to set up an appointment for the interview. Verbal consent was obtained after reading the respondent a statement about confidentiality and the voluntary nature of the study. Respondents who completed an interview received $30 in appreciation for their participation.

Status of Households and Selected Respondents in DNORS

Screener Survey Results

A total of 1,557 screener interviews were completed with an eligible screener respondent (age 18+ years and lived at the sample address prior to Hurricane Katrina). A total of 1,561 screener interviews were completed, but four were repeats of a previous interview with the same household. These four repeated households (11960009, 11360007, 11730010, and 11060051) were subsequently dropped from the DNORS data files.

Among the eligible persons who completed the screener interview, 1,141 (73%) currently lived in New Orleans; 181 (12%) lived in the state of Louisiana but not in New Orleans; and 235 (15%) lived outside of Louisiana.

Due to the anticipated difficulty of reaching households and respondents via telephone, the study estimated that approximately 10% of the interviews would need to be conducted face-to-face with respondents. The results show that 202 (13%) of the 1,557 screener interviews were conducted face-to-face.

The final disposition of the total of 6,078 DNORS screener cases is summarized in Table 4.5. Figure 4.1 provides a visual depiction of the disposition of DNORS screener cases and highlights the two-phase selection process.

Screener Interview Length. The average length of the screener interview was 8.18 minutes across both telephone and face-to-face interviews. Digital recording of the screener interview was done for quality control purposes with the explicit consent of the respondent. Ninety-six percent (96%) of the screener respondents gave permission for their interview to be recorded.

Table 4.5. Screener Result Status for DNORS

Code	Status	Count	Percent
1001	Completed screener	1,557	25.7
1001	Completed screener (repeat of previous complete)	4	0.1
	Total completes: 1,561		
5001	Final refusal, respondent	200	3.3
5002	Final refusal, informant (R known)	22	0.4
5003	Final refusal, R unknown	84	1.4
	Total refusals: 306		
6001	NI: tracking exhausted (R known)	3,236	53.2
6003	NI: incomplete interview	.	.
6004	NS2: permanent condition	19	0.3
6005	NS2: language barrier, R known	7	0.1
6007	NI: contact; other reason	189	3.1
6008	NI: contact; eligibility unknown	1	0.0
6009	NI: locked or gated building, eligibility unknown	29	0.5
6010	NS2: respondent incarcerated	.	.
6012	NS2: deceased respondent	60	1.0
6014	NI: final non-contact, R known	5	0.1
6015	NS2: language barrier, R unknown	12	0.2
8001	NS1: Improper sample listing	99	1.6
9001	NS1: HU vacant in Aug 2005	436	7.2
9002	NI: HU occupied in Aug 2005, cannot identify HH	28	0.5
9003	NI: HU occupied Aug 2005, HH identified; not found	90	1.5
	Total de-selected (from tracking exhausted): 1,390		
	Total non-interview: 2,188		
	Total non-sample: 633		
Total		6,078	100.0

Note: NI: non-interview; NS1: non-sample at selection stage; NS2: non-sample at screener stage.

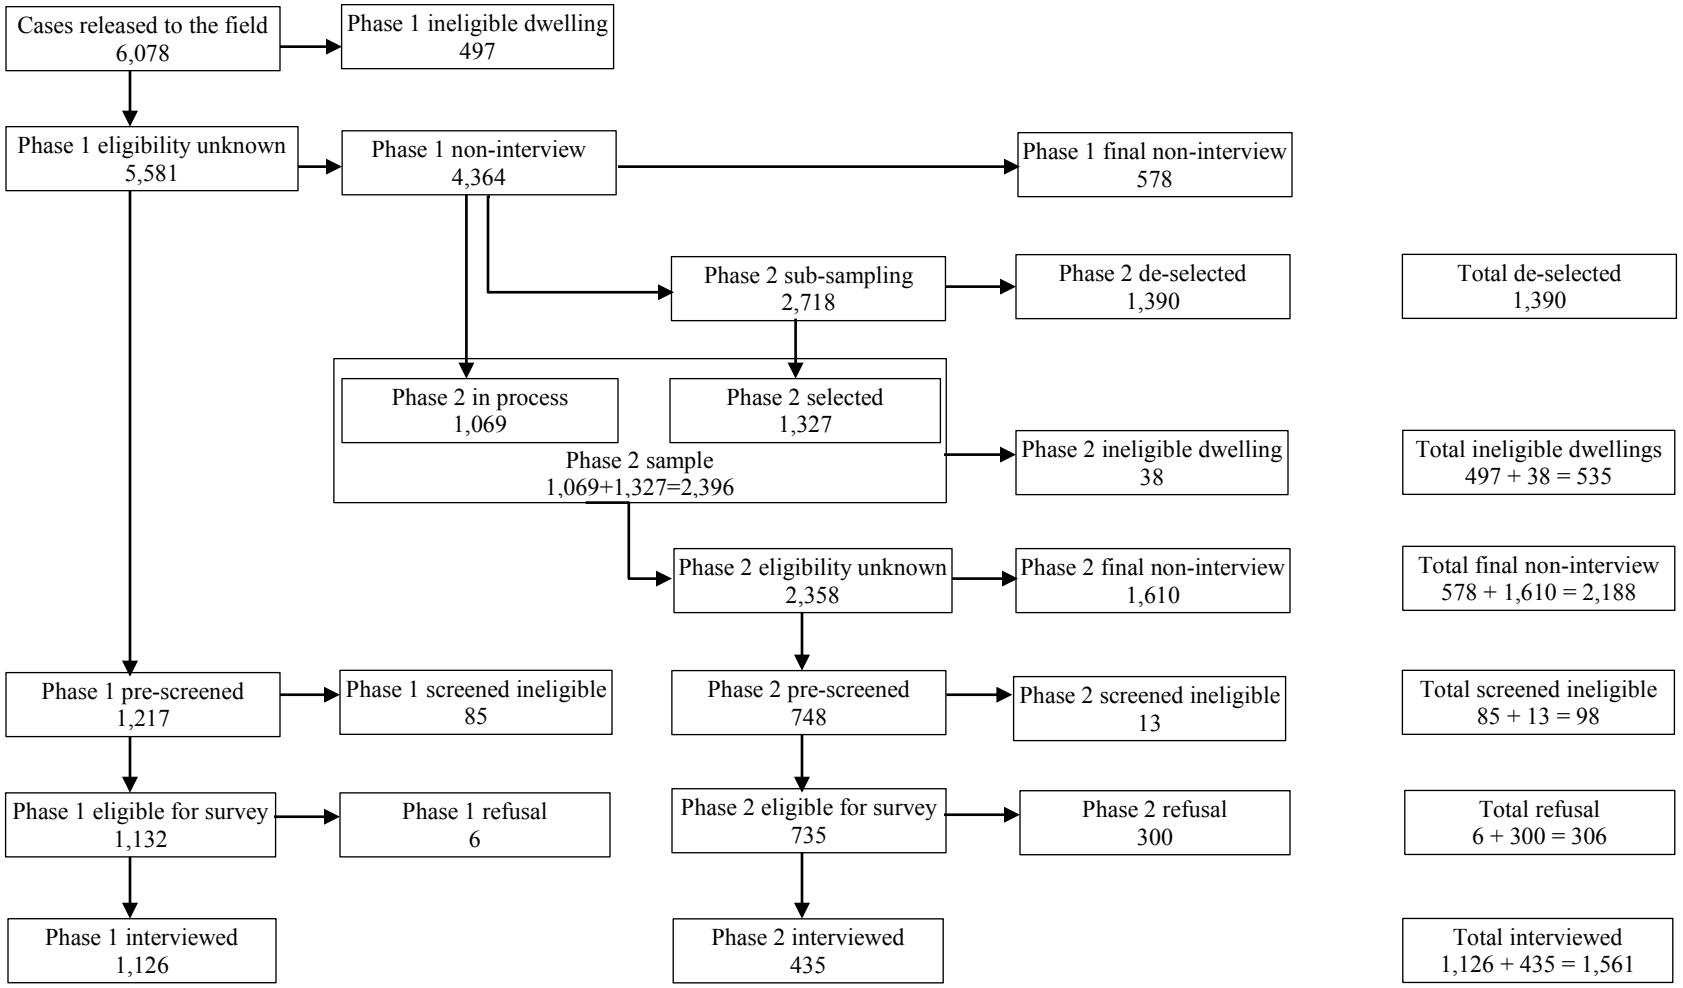
Main Interview Survey Results

A total of 1,761 main interviews were completed with eligible respondents. An additional four main interviews were completed (for a total of 1,765 main interviews) but were dropped because they were from households that were dropped because they were repeats of an already completed interviewed household. Among the completed main interviews are 10 partially completed cases. These 10 partially completed interviews were distributed across interview type: HH/HHA Interviews (n=8) and Adult Interviews (n=2).

The 1,761 interviews were completed from a total of 2,200 eligible main sample cases that were spawned from the 1,557 completed screener interviews. Each eligible respondent selected for the main interview (regardless of interview type) was assigned a sample line in the main interview so that the interviewer could then contact the potential respondent to conduct the main interview.

Eligible household members selected from the screener roster to complete either the Household (HH) interview, an Adult (A) interview, or a combined HHA interview, were aged 18+ years and living with the household prior to Hurricane Katrina, regardless of where the person resided at the time of the interview. Among eligible persons who completed the main interview, 1,275 respondents (72%) lived in New Orleans; 206 (12%) lived in the state of Louisiana but not in New Orleans; and 280 (16%) lived outside of Louisiana.

Figure 4.1. Disposition of DNORS Sample Screener Cases

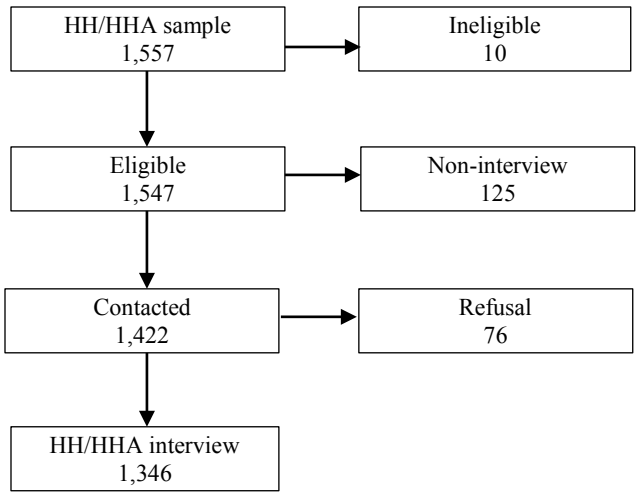


Due to the anticipated difficulty of reaching households and respondents via telephone, the study estimated that approximately 10% of the interviews would need to be conducted face-to-face with respondents. The results show that 139 (8%) of the 1,761 Main interviews were conducted face-to-face. The final sample dispositions by type of interview and overall are described below.

The 2,202 total individual sample lines in the main sample were distributed as follows: 912 HHA, 645 HH, and 645 Adult sample lines. In presenting the fieldwork results, we combine HH and HHA sample lines because these respondents were asked to complete similar interview components and had very similar response rates. Note that for 35 households, a proxy respondent was interviewed as a replacement for a selected HHA respondent in the same household who did not complete an interview.

In Figure 4.2 we present information on the disposition of the HH/HHA individual sample lines. A total of 912 + 645 = 1,557 HH/HHA sample lines were spawned from the completed Screener Interviews. Of these, 10 cases were ineligible, leaving 1,547 eligible cases. A total of 125 cases were determined to be non-interview for a variety of reasons—including, for example, a language barrier, disability, or death. Of the 1,422 contacted cases, 76 were final refusals while 1,346 provided an HH/HHA interview. Of the total completed HH/HHA interviews, 785 were HHA respondents and 561 were HH respondents.

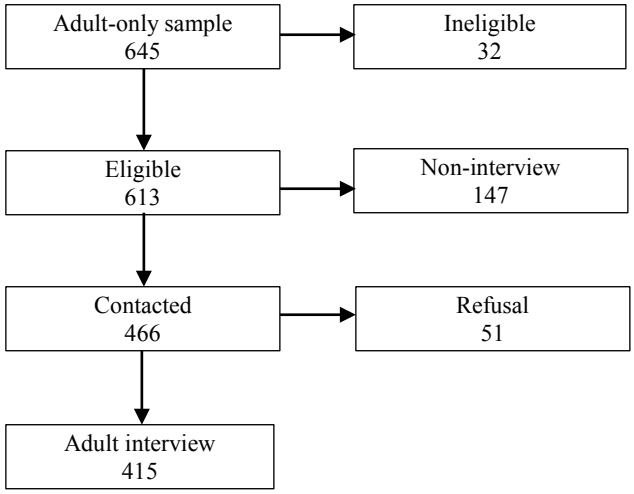
Figure 4.2. Disposition of DNORS HH/HHA Cases



In Figure 4.3 we present information on the disposition of the Adult individual sample lines. A total of 645 Adult-only sample lines were spawned from the completed Screener Interviews. Of these cases, 32 were ineligible, leaving 613 eligible cases. A total of 147 of these eligible cases were determined to be non-interview for a number of reasons. Finally, of the 466 contacted cases there were 51 refusals, with the remaining 415 selected Adult sample cases providing completed interviews.

There were 14 households where the Household Respondent (HHR) was not interviewed but during the callback phase to get household roster information, the AR completed the detailed pre-Katrina household roster section of the Main interview. For another 20 households, no detailed pre-Katrina household roster section was completed. Thus there are more households with roster data (1,380) than there are HHA and HH interviews combined (1,346).

Figure 4.3. Disposition of DNORS Adult Individual Cases



Child Module. Female respondents with children under the age of 18 who were selected to complete either the Adult or the HHA interview were asked detailed information about up to three randomly selected children. A total of 139 female respondents completed the Child Module, with 62 reporting on one child, 46 reporting on at two children, and 31 reporting on three children.

Completed Household. DNORS counted a "completed household" as occurring when either of the following situations was met:

1. A household consisting of a single adult completed the HHA interview; or
2. A household of two or more person where one person completed the Adult (A) interview and another completed the household (HH) interview, or in the case where the most knowledgeable respondent was also the person randomly selected to complete the Adult interview, completed the HHA interview.

The field progress report tracked the status at the household level. All interviews were successfully completed in a total of 1,170 households. This count includes interviews completed with "replacements" as part of the non-response follow-up study.

Main Interview Length. Because average interview length was expected to vary based on the type of interview, results are presented by type below. Note that average interview length does not include the partially completed interviews that were accepted as completed interviews.

The average length of the fully completed main interviews by type was a follows:

- For the Household (HH) interview, the average length was 45.42 minutes
    - Telephone: 45.23 minutes; face-to-face: 47.50 minutes

- For the Adult (A) interview the average length was 34.62 minutes
    - Telephone: 34.63 minutes; face-to-face: 34.51 minutes

- For the combined (HHA) interview the average length was 41.26 minutes
    - Telephone: 41.40 minutes; face-to-face: 39.67 minutes

Digital recording of the main interviews was done for quality control purposes, with the explicit consent of the respondent. Almost all of the respondents who fully or partially completed the main interview agreed to have their interview recorded: 98.5% of the HH interview respondents gave permission for their interview to be recorded; 97.8% of the Adult interview respondents gave permission for their interview to be recorded; and, 98.6% of the HHA interview respondents gave permission for their interview to be recorded.

DNORS Response Rates

We present DNORS response rates for two sets of fieldwork results. First, we show the response rates for the DNORS household screener, which require an adjustment for dwelling vacancy rates prior to Hurricane Katrina as well as an adjustment for mortality and institutionalization of individuals between the time of Katrina and the DNORS which preclude the possibility of completing an interview. Second, we present response rates for the individual survey outcomes, which comprise of interviews with Household Respondents (HHA and HH respondents) and with Adult Respondents. Both the screener and individual response rates also require an adjustment for two-phase fieldwork plan, which involves the use of a weight constructed as the inverse of the Phase 2 fieldwork selection probabilities.

DNORS Screener Response Rates

The DNORS final adjusted screener response rate was 39.3%. This final adjusted screener response rate accounts for dwelling vacancies, mortality and institutionalization, and the second stage weights.

Table 4.6. DNORS Household Screener Outcome Rates

		Adjusted for:		Final
Measure	**Unadjusted**	**Vacancy**	**Mortality**	**Adjusted**
Tracked household				
Unweighted	60.0%	67.7%	63.5%	71.6%
Weighted	65.3%	73.7%	69.1%	77.8%
Located household				
Unweighted	35.2%	39.7%	37.3%	42.0%
Weighted	36.3%	41.0%	38.4%	43.3%
Eligible household				
Unweighted	.	.	.	95.0%
Weighted	.	.	.	94.9%
Consented				
Unweighted	.	.	.	83.6%
Weighted	.	.	.	83.7%
Overall response rate				
Unweighted	28.7%	35.2%	32.3%	38.6%
Weighted	29.7%	36.0%	33.2%	39.3%

Note: Weighted estimates adjust for the sub-sampling non-interview cases in Phase 2 of the DNORS fieldwork.

In Table 4.6 we present the full set of DNORS screener response rates using a variety of different adjustments as well as the two-stage weights. The unadjusted rates in the first column

provide both unweighted and weighted estimates of the household tracking rate, locating rate, and overall response rate. As expected, the preferred weighted outcome rates are higher than the unweighted rates. They indicated that approximately two-thirds of the released DNORS sample households were successfully tracked and just over half of these households (36.3%) were successfully located. Finally, almost all of the located households were successfully interviewed.

The second and third columns in Table 4.6 show the effects of separate adjustments for dwelling vacancy rates and for mortality and institutionalization, which mostly affected older individuals. The vacancy rates were estimated at the segment level using data from the 2000 Decennial Census, and are conservative because New Orleans continued to lose population between 2000 and 2005. The mortality and institutionalization rates addressed the problem that many elderly households—especially single-member elderly households—did not survive from the time of Katrina to the survey date and hence could not complete a DNORS screener. We estimated that 4.5% to 6.3% of New Orleans households were ineligible for the DNORS screener due to death, institutionalization, or emigration of all members. We estimated the net institutionalization rate by applying the cross-sectional ACS 2007 proportions institutionalized in the 5-year age group, p(x+5,x+9) – p(x,x+4), to the New Orleans elders living alone in 2005. Using the 2004 U.S. life tables along with an estimate of excess Katrina-related deaths among the elderly (from Sharkey, 2007), we estimated that there were a total of 6,188 deaths among single-person elder households, and an additional 646 net institutionalizations among single-person elder households. Together, these two groups account for a total of 3.6% of New Orleans households in 2005. A multiplier of 1.5 for deaths and institutionalizations (and emigration) of all members of households with one or more individuals results in an estimated ineligibility rate of 5.5%, with a range of 4.5% to 6.3% for a multiplier between 1.25 times and 1.75 times the estimated 3.6%. Ultimately, we settled on using an adjustment factor of 6.0% to

Table 4.7. Estimated Proportion of Pre-Katrina Households Lost Due to Mortality or Institutionalization

Row	Description	Source	Estimate
1	Katrina-related deaths to individuals aged 65+ years	Sharkey, P. (2007). Survival and death in New Orleans: An empirical look at the human impact of Katrina. *Journal of Black Studies*, 37(4), 482-501.	594.3
2	Proportion of individuals aged 65+ years living alone	Calculated from 2005 ACS microdata	0.414
3	Excess (Katrina-related) deaths to individuals aged 65+ years living alone	Row 1 x Row 2	246
4	Estimated deaths to individuals aged 50+ years living alone	2004 US Life Tables NVSR 56(9), Table V, Total Population, abridged	5,942
5	Total estimated and excess deaths to individuals aged 65+ years living alone	Row 3 + Row 4	6,188
6	Estimated number of individuals aged 65+ years living alone who became institutionalized	Calculated from 2007 American Community Survey microdata	646
7	Household heads (all ages)	Calculated from 2005 ACS microdata	190,208
8	Expected proportion of all New Orleans households with a single occupant aged 50+ years who died	(Row 5 + Row 6) / Row 7 = (6,188 + 646) / 190,208	0.036
9	Applied multiplier of 1.67 to account for households with more than one individual and no survivors due to mortality and institutionalization	1.67 x 0.036	0.060

account for the common occurrence of two (or more) elderly persons coresiding and both (or all) of these individuals dying or being institutionalized between the time of Hurricane Katrina and the DNORS fieldwork, which corresponds to a multiplier of 1.67. The construction of the estimated adjustment factor is summarized in Table 4.7.

DNORS Individual Response Rates

We next describe response rates for the DNORS individual interviews. Conditional on completing the DNORS Screener Interview, there were high response rates for the HH/HHA interviews in DNORS. The overall HH/HHA response rate was 85.7% (see Table 4.8). The refusal rate was low at 5.7% and the non-interview rates was 9.1%.

The response rate for DNORS Adult respondents was 67.0%, with a refusal rate of 11.6% and a non-interview rate of 24.3%. The outcome rates for Adult respondents were worse than those for HH/HHA respondents because the random selection of the Adult respondent made it more likely that this person was not coresident with the Screener respondent. As a consequence, additional tracking and locating activities often needed to be conducted, which is reflected in the non-interview rate almost three times higher for Adult respondents than for HH/HHA respondents.

Table 4.8. DNORS Sampled Individual Outcome Rates

Respondent type and outcome	Outcome rate
HH and HHA respondent	
Ineligible	0.7%
Non-interview	8.3%
Refusal	5.3%
Response	86.8%
Adult respondent	
Ineligible	5.1%
Non-interview	24.3%
Refusal	11.6%
Response	67.0%

Note: Household respondent type includes individuals selected to be the household respondent and the adult respondent. Adult respondent type includes individuals only selected as this type—that is, it excludes individuals selected to be both the adult and household respondent.

Representativeness of the DNORS Sample

DNORS' representation of its target population—residents of New Orleans just prior to Hurricane Katrina—is an issue of potential concern given the inherent challenges in finding and interviewing these individuals almost five years later and given DNORS' response rate of approximately 40%. We provide some information about how well DNORS did in capturing the target population.

To assess the population representativeness of DNORS, we compared demographic, social, and economic characteristics of all individuals in DNORS household rosters from the period just prior to Hurricane Katrina with those from a contemporaneous gold-standard survey of the same

population. The gold-standard survey is the American Community Survey (ACS), which has an extremely high (98%) response rate, excellent data quality and completeness, and a sufficient sample size. Given the unique design of DNORS, there are few external sources of data to use to evaluate the representativeness and characteristics of the weighted data. The ACS provides an appropriate comparison, but of course does not reflect circumstances in the five years after Katrina that could legitimately remove individuals from the DNORS sample (e.g., due to death).

We pooled the unweighted DNORS and weighted ACS data and estimated a propensity model, using logistic regression, to assess whether there are individuals with specific characteristics in DNORS who are less likely to be interviewed than corresponding weighted respondents in the ACS. Using the unweighted DNORS data provides a stringent assessment of DNORS representativeness because the weights help improve the DNORS alignment with the ACS, as shown in our assessment of the DNORS weights in Chapter 5. The dependent variable is a 0/1 indicator of whether an observation comes from ACS (y=0) or DNORS (y=1).

Our results are shown in Table 4.9. There are no statistically or substantively significant differences between the DNORS and ACS samples according to respondents' race, sex, or housing tenure. However, there are significant differences between unweighted DNORS and weighted ACS by dwelling type, household size, age, place of birth, education, children in the household, and household income. Although having significant differences in covariates between DNORS and ACS may be a cause for concern, the situation is ameliorated because the substantive significance of the differences is relatively modest for most covariates. In particular, DNORS was able to complete interviews substantial numbers of individuals in the underrepresented segments.

The covariates of most concern are related to dwelling type and number of adults in the dwelling. Individuals who lived in apartments were underrepresented in DNORS, which is a consequence of these individuals being more difficult to identify, track, and locate. Many of these individuals were renters, likely had short tenure, and may not have known their neighbors. Furthermore, in the aftermath of Katrina, many apartment building were entirely uninhabited, providing no opportunities to obtain leads for finding individuals from neighbors, a superintendent, or a building manager. The number of adults in a dwelling is mechanically related to likelihood of being a respondent in DNORS because multiple adult households have several individuals who can be identified and tracked, while single individuals may be untraceable for a variety of reasons including death and institutionalization. As we show in Table 5.1 in Chapter 5, the sampling weights account for most of the differences between DNORS and ACS sample characteristics, although they do not entirely eliminate the differences by place of birth and dwelling type. Note also that the response patterns in ACS tend to be qualitatively similar to those in DNORS—for instance, apartment dwellers and individuals born in Louisiana are under-represented in both ACS and DNORS. The ACS results also show that, as with DNORS, weights can effectively be used to narrow or eliminate these gaps.

The focus on differences in individual covariates between the DNORS and ACS samples provides some specific information about which specific groups may be underrepresented in DNORS. But to obtain an overall assessment of the DNORS sample, it is helpful to examine the overall propensity, or predicted probability, of observations being from the DNORS sample compared to the ACS sample. A graph of this propensity is provided in Figure 4.1 and shows two separate curves for the predicted probability of being in the DNORS sample for ACS respondents (solid line) and for DNORS respondents (dashed line). Overall, both distributions have broad coverage and there is substantial overlap between the distributions over almost the entire range. However, there is some evidence that there are individuals in ACS who have a

very low (<.10) probability of being in DNORS, although this group is small and far from the main mass of the two distributions.

5. DNORS SAMPLE WEIGHTS

Introduction

This chapter describes the sample weights for DNORS. We begin by describing the DNORS samples and linking them to the population groups that are of interest to DNORS data users. We then describe how the weights were calculated and indicate how the sample-specific weights are modified when various samples are combined. Finally, we provide some general comments and guidance for using the DNORS weights.

DNORS Samples

Households

DNORS collected data on a representative sample of households that lived in Orleans Parish in August 2005, just before Hurricane Katrina occurred. The sample of households was drawn from an address listing for a randomly selected set of 149 area segments in Orleans Parish (area segments are clusters formed from Census Blocks). During the DNORS fieldwork, staff attempted to identify, locate, and interview households within the U.S. that had lived in the sampled addresses at the time of Hurricane Katrina. The household sample is limited to those pre-Katrina households from New Orleans for which at least one member was still living and aged 18+ years at the time of the DNORS fieldwork in 2009–2010 and could be interviewed either by telephone or face-to-face, if necessary, in Orleans Parish. Households in which all the members were deceased or institutionalized were ineligible for the study.

Household and Adult Respondents

The Household Respondent (HHR) is an individual aged 18 years or older (at the time of the DNORS interview) who was randomly selected from among those in the pre-Katrina dwelling who were identified in the DNORS Screener as being most knowledgeable about the current circumstances of all members of the pre-Karina household. The Adult Respondent (AR) is a person who was randomly sampled from among all individuals aged 18 years or older at the time of the DNORS interview. The AR and HHR respondents were drawn from the list of household members who were living at the sampled address in New Orleans in August 2005 at the time of Hurricane Katrina and who were aged 18 years or older at the time of the first successful contact with the household when the screener interview was completed. Because the AR was selected first, the HHR could be the same person that was selected as the AR.

Child Sample

DNORS collected data on a sample of female Adult Respondents' living children who were less than age 18 years at the time of the interview in 2009–2010. The DNORS child sample was selected via the random sample of female Adult Respondents. Each female Adult Respondent provided a list of all her biological and adopted children. All of these children alive and less than age 18 years at the time of the survey were selected for the detailed DNORS Child Module if there were three or fewer children on the list; if there were four or more children alive and less than age 18 years on the list, three of these children were selected at random for the Child Module.

Children who were less then age 4 or 5 years—and hence too young to have experienced the Hurricane Katrina themselves—were eligible for inclusion in the Child Sample, as were children

who did not reside in New Orleans at the time of Katrina (e.g., children who in 2005 were living with their father or grandparent away from the city). Children who lived in New Orleans in 2005 but whose mother did not live in New Orleans in 2005 or whose mother died before the survey in 2009–2010 are not represented in the DNORS Child Sample.

New Orleans Population Groups Represented by DNORS

The DNORS data, when used with the appropriate sampling weights that accompany the data, provide representative samples of several different population groups that are tied to households residing in New Orleans in August 2005 just before Hurricane Katrina.

First, DNORS provides a representative sample of households with one or more adult member who was alive in 2009–2010. Through this representative sample of households, DNORS provides information on the pre-Katrina New Orleans household population in August 2005 as well as information on their status at the time of the DNORS fieldwork in 2009–2010.

Second, DNORS provides self-reported information on a representative sample of adults in 2009–2010 who resided in New Orleans just prior to Hurricane Katrina. There are two different ways to construct this adult sample in DNORS: either it can comprise of all DNORS Adult Respondents or it can comprise of the pooled sample of Adult Respondents and Household Respondents.

Finally, DNORS provides data on children of a representative sample of adult women in 2009–2010 who resided in New Orleans just prior to Katrina.

Construction of Weights

The DNORS weights were constructed in several stages. In the first stage, the DNORS household weights were constructed. Next, the household weights and sampling procedures for individuals were used to construct the weights for the Adult Respondent and the Household Respondent. The Adult Respondent weights for females and information on their eligible children were used to construct the Child Sample weights. Finally, the Adult and Household Respondent selection procedure was used to construct the Pooled Adult Respondent weight for analyses that combine the Adult and Household Respondents.

Household Weight

The DNORS household weight was constructed using multiple steps.

We began with a design-based weight that accounted for differences across sample segments in the probability of a household being sampled for DNORS. The design-based weight for household i is,

$$w_i^d = \frac{1}{pr(i\ is\ sampled)}. \quad (1)$$

Because the probability of selection was based on the number of households in a segment, all households within the same segment receive an equal design-based weight.

Next we applied via raking a post-stratification process in which two sets of correction factors from external household-level data were used. The first set of correction factors was based on an ACS validation sample that included all New Orleans households responding to the ACS

between January 2004 and August 2005. It included characteristics describing the age-group (ages 18-29, 30-39, 40-49, 50-59, 60-69, or 70+), sex (male vs. female), and race (black vs. nonblack) of a reference adult in each ACS household who was the individual aged 18+ years in the household whose age was closest to that of the median aged adult in all New Orleans households in 2005 (age 41 years). We experimented with two other definitions of the demographic cells, one based on the demographic characteristics of the *household head* and another based on the demographic characteristics of the *oldest household member*. Using household head characteristics was problematic because household heads are defined differently in the ACS and in DNORS. The weights based on the oldest household member's characteristics are quite similar to the weights based on the nearest-to-median-age member's traits but they exhibited a higher variance.

We constructed the first validation sample from the Restricted ACS data files, which were accessed through the Census Bureau's Research Data Center at the University of Michigan. An advantage of using the Restricted ACS data was that it included interview month, which is not provided on the public use ACS files. Furthermore, in contrast to the public use ACS data, the Restricted ACS data provide larger sample sizes and include unperturbed information on individual characteristics.

The second set of correction factors were based on the cross-classified household characteristics describing housing tenure (owner vs. renter), the presence of children in the household, the number of adults in the household (1 vs. 2 vs. 3+), and the dwelling type (single-family residence vs. duplex vs. apartment). These household characteristics were chosen because they could be matched easily between the ACS and DNORS and to address the underrepresentation in the DNORS sample of certain groups such as renters, apartment dwellers, and households with a single adult. An initial set of 36 categories were refined down to a final set of 20 categories by merging adjacent categories in order to avoid small cell sizes. The ACS estimates were developed from the public use data for 2005 because the Restricted ACS data were no longer available to us. The 2005 ACS data were designed to represent the mid-year target population in July 2005, and hence provide an appropriate benchmark for the pre-Katrina DNORS sample from August 2005.

For each of the two sets of correction factors, we constructed a set of mutually exclusive demographic cells with $j = 1,..,J$. For each cell j, the correction factor is

$$w_j^{cf} = \left(\frac{\sum w_k^{ACS} 1(cell=j)}{\sum w_k^{ACS}}\right) \Big/ \left(\frac{\sum w_i^d \times 1(cell=j)}{\sum w_i^d}\right). \quad (2)$$

The numerator is the "cell share" of demographic group j in the ACS validation sample. The denominator is the "cell share" of demographic group j in the DNORS sample.

We sequentially calculated and applied the correction factors for each of the two sets reference distributions from the ACS. At each step, we calculated a household weight for DNORS household i belonging to demographic cell j as

$$w_{ij}^{hh} = w_i^d \times w_j^{cf}. \quad (3)$$

With this new weight, we calculated the cell shares for each demographic group in the DNORS sample and then recalculated and applied the correction factors. We iterated this procedure to

convergence. Finally, we normalized the final household weights (HU_WGT_S) to have a mean equal to one.

Adult Respondent Weight

The creation of the Adult Respondent weight was also a two-step process. The first step was to compute the simple probability of selection based on the number of eligible adults in the pre-Katrina household listing in the Screener Interview (the "within-household selection probability"). For the randomly-selected Adult Respondent, this probability is the reciprocal of the total number of surviving pre-Katrina household members age 18+ years at survey, regardless of whether they live together or apart. The inverse of this probability, multiplied by the normalized post-stratified household weight, provided the preliminary Adult Respondent weight.

The second step was to apply an individual post-stratification adjustment factor based on the comparison of the size and proportion of population subgroups, by age-category (14-24, 25-34, 35-44, 45-54, 55-64, and 65+), sex (male vs. female), and race (black vs. nonblack) between DNORS and the 2005 New Orleans mid-year post-censal population estimates from the U.S. Census Bureau. (Because the Census population estimates grouped ages 10-14 into a single category, we estimated the number of 14 year olds as comprising one-fifth of the age 10-14 group, and added it to the 15-19 and 20-24 groups to get a 14-24 group.)

The post-stratification adjustment factor was computed as a ratio of the U.S. Census Bureau's 2005 mid-year population estimates to the sum of weights of the same population subtotals among DNORS respondents. Thus the sum of weights using the post-stratified and scaled weights is equal to the 2005 totals for these age groups and the total population. Multiplying the preliminary adult weight by the post-stratification adjustment factor yielded the final adult respondent weight (ADLT_WGT_S).

Child Weights

We created a set of weights for the DNORS child sample to reflect the selection of female adult respondents and the subsampling of children of mothers with more than three children. The DNORS child weights were the product of the mother's DNORS post-stratified adult sampling weight (normalized to have a mean of one) and the inverse probability of a given child being selected. For children in the sample with two or fewer eligible siblings under 18 years of age, the child's probability of selection is equal to one; for children with three eligible siblings under 18 years of age the child's selection probability is equal to 3 / 4 = 0.75; for children with four eligible siblings under 18 years of age the child's selection probability is equal to 3 / 5 = 0.6; and for children with five eligible siblings under 18 years of age the child's selection probability is equal to 3 / 6 = 0.5. The maximum number of eligible children for a female adult respondent was six. The DNORS child weights were normalized to have a mean of one.

The child weights are in the RESP_IW_PUBFIN file and are called CHILD_WGT1, CHILD_WGT2, and CHILD_WGT3 representing the weight for each selected child for up to three children. Each child of a given Adult Respondent mother has the same sample weight.

Pooled Adult Respondent Weight

As described above, there are two types of adult respondents in DNORS: the Household Respondent (HHR) and the Adult Respondent (AR). Both types of respondents were asked to

complete the full DNORS adult questionnaire. They can be pooled together and analyzed as an expanded adult sample using the pooled adult respondent (PAR) weight.

Let the probability of entering the PAR sample be represented by p_3, so that p_3 is the combined probability of being only the HHR, only the AR, or both the HHR and AR. If p_1 is the probability of being selected as the AR and p_2 is the probability of being selected as the HHR, then p_3 is given by:

$$p_3 = 1 - (1 - p_1) \times (1 - p_2). \quad (4)$$

In words, p_3 is the complement of the probability of not being selected as the HHR or the AR, and is based on the fact that the AR is selected independently of the HHR.

The probability p_1 of being selected as an AR is one divided by the total number of adults in the household eligible to be selected as the AR. For adults who were identified as being eligible to complete the household questionnaire module, the probability p_2 of being selected as an HHR is one divided by the total number of adults in the household belonging to this eligibility group. For individuals who were not identified as being eligible to complete the household questionnaire, $p_2 = 0$. In a household with a single knowledgeable person (one eligible HHR respondent), p_2 equals one for the HHR and zero for other adults. For each individual who was either a HHR or an AR, the appropriate values of p_1 and p_2 can be used in to obtain p_3, the probability of selection into the PAR sample.

The pooled adult respondent sampling weight is the product of the inverse of the sampling probability, p_3, and the household sampling weight. To produce the final PAR weights, we followed the same procedure used to post-stratify the AR weight. That is, we post-stratified the weights against the estimated proportions of the pre-Katrina New Orleans population by age-race-gender category obtained from the 2005 U.S. Census Bureau mid-year post-censal population estimates. Lastly, we normalized the PAR weights to have a sample-wide mean equal to one. The PAR weight, found in the RESP_IW_PUBFIN file, is called PAR_WGT_S.

Assessment of DNORS Weights

We assess the performance of the DNORS weights by comparing univariate distributions of several key variable between DNORS and the 2005 ACS. The results are presented in Table 5.1. This table provides unweighted and weighted summary statistics for both ACS and DNORS, as well as results of statistical test of the equivalence of the ACS and DNORS distributions for each variable.

Overall, the weighted DNORS and ACS distributions align very closely. There are statistically insignificant differences for age, sex, race, education, housing tenure, number of adults in dwelling, and households with children. The only statistically significant differences between DNORS and the ACS are for place of birth and dwelling type. Compared to the ACS, DNORS slightly under-represents individuals born in Louisiana (74% vs. 80%). Note that both ACS and DNORS up-weight Louisiana-born individuals, with the ACS providing a larger adjustment. DNORS under-represents individuals residing in apartments compared to the ACS (39% vs. 44%). Again, both ACS and DNORS up-weight individuals living in apartments, although the DNORS weights result in a larger adjustment. Overall, the patterns of differential weighting in DNORS is similar to that in the ACS—in other words, both ACS and DNORS tend to under-represent the same categories of individuals.

Table 5.1. Assessment of DNORS Weights: Comparisons with ACS-2005

	ACS		DNORS	
Variable	**Unweighted**	**Weighted**	**Unweighted**	**Weighted**
Age				
<10	11%	15%	12%	12%
10–19	13%	14%	16%	15%
20–29	12%	14%	11%	13%
30–39	12%	13%	12%	14%

Household with children				
No	74%	71%	65%	71%
Yes	26%	29%	35%	29%
F-test of weighted ACS vs. weighted DNORS (p-value): 0.0000 (0.9998)				

Note: The following variables were tabulated at the individual level: age, sex, race, education, and place of birth. The remaining variables were tabulated at the household level: housing tenure, dwelling type, adults in dwelling, and household with children. The DNORS and ACS household weights were used for weighting.

Summary of DNORS Weights

In Table 5.2 we list the four different DNORS weights and present case counts and summary statistics. All weights were normalized to have a mean of one. Overall, the DNORS weights appear to be well-behaved, with few extreme values and moderate values for the variances and design effects.

Table 5.2. Summary of DNORS Weights for Interviewed Respondents

Sample	Weight variable name	Count	Percentile			Variance	Rho	Design Effect
			1st	50th	99th			
Household	HU_WGT_S	1,380	0.256	0.699	4.743	0.814	0.321	3.648
Adult	ADLT_WGT_S	1,200	0.226	0.747	4.138	0.629	0.162	2.153
Pooled adult	PAR_WGT_S	1,761	0.209	0.690	4.647	0.901	0.162	2.757
Child	CHILD_WGT	247	0.250	0.834	3.497	0.479	0.496	1.897

Recommendations for Using DNORS Weights

In this section we summarize our recommendations for using the DNORS weights. Our basic recommendation is for users to always use the provided DNORS weights. In addition, we recommend that when calculating standard errors users should wherever possible account for the clustering of the DNORS data by sample segment, by household, or by sibship. Generally, when the option of clustering is only available at a single level, it is recommended that users account for clustering at the finest level. Furthermore, when analyses focus on a subset of individuals of any type, users should use an appropriate “sub-population” command. Clustering corrections and subpopulation commands are available with all standard statistical software.

Household weight (HU_WGT_S). This weight should be used for analyses in which the unit of analysis is: (a) the household, (b) the Household Respondent, or (c) all individuals listed on the household roster. This weight accounts for differences in sampling rates across segments, and post-stratification to margins representing characteristics of a representative individual in the households (e.g., age, race, and sex) and of the dwelling type and inhabitants. Estimates should account for clustering at the segment level when there is one observation per household—e.g., when analyzing household-level characteristics or outcomes for the Household Respondent. When analyzing some or all individuals who appear in the household roster, estimates should account for clustering at the household level.

Adult weight (ADLT_WGT_S). This weight should be used for analyses that use Adult Respondents on their own. This weight accounts for differences in sampling rates across segments, including post-stratification of the household sample, as well as differences in sampling rates across households based on the number of adults in each household. Finally, it also incorporates a second-stage post-stratification to U.S. Census Bureau population estimates defined by age, race, and sex. When analyzing Adult Respondents on their own, estimates should account for clustering at the segment level.

Pooled Adult weight (PAR_WGT_S). This weight should be used for analyses that combine together the Household Respondent sample and Adult Respondent sample. This weight incorporates the household weight and accounts for multiple chances of selection at the household level; it also incorporates a second-stage post-stratification to U.S. Census Bureau population estimates defined by age, race, and sex. When analyzing the Pooled Adult Respondent sample, estimates should account for clustering at the household level.

Child weight (CHILD_WGT). This weight should be used for analyses of children for whom information was collected in the Child Module section of the questionnaire (Sections CA-CE). This weight incorporates the Adult Respondent weight and a child selection probability based on the number of children exceeding three. Each child in a sibship receives the same weight, and estimates should account for clustering at the sibship level.

All of the DNORS weights have been normalized to have a mean equal to one. Hence, weighted counts using all observations of a particular type sum to the corresponding sample size but do not match any New Orleans population totals. There are a number of conceptual and empirical challenges associated with adjusting DNORS-based estimates to match population or subpopulation totals—most importantly, there are no population estimates available that correspond sufficiently well to the DNORS sample definitions to be used as a benchmark for the DNORS weights. Nevertheless, the design and implementation of DNORS is sufficiently rigorous and well-defined to provide a set of internally-consistent sampling weights. Data users who want to construct their own set of adjusted weights to match population control totals are warned to do so extremely cautiously and with the understanding that no support is available from the DNORS project for such an undertaking.

Finally, if users have questions about whether their analyses should be weighted or unweighted or about how to reflect the sampling design in their calculation of parameter estimates and standard errors, they should consult with a survey statistician. The DNORS project cannot provide specific guidance and advice beyond the general information and guidelines offered here.

6. DATA ENTRY AND DATA CLEANING

Data Entry

The DNORS questionnaire modules were administered to respondents using "computer-assisted" interviewing software (i.e., computer-assisted telephone interviewing or CATI). The software improves the quality and flexibility of the interviews because respondents are asked only questions that are appropriate to them, the program transfers information from one part of the questionnaire to other parts, and range and consistency checks are performed instantly. However, CATI programming of complex questionnaires can lead to programming errors even in the most carefully tested instruments. We have attempted to correct such errors where possible, and to flag instances where such errors could not be corrected.

Roster Cleaning

Verification with Screener

The pre-Katrina household roster in HHROST_PUBFIN was based on the list of pre-Katrina household members collected in the screener. We verified the roster listing against the screener listing using the name provided along with age and gender. There were some cases where the list of people changed such that individuals on the screener were dropped (6 people) or were added later by the respondent (85 people), as well as a couple of cases where the order of people on the screener differed from the order in the roster done by the respondent. Those who were only in the screener and not in the household roster will have a value for the screener person number (PERSONNUM) but no value for the household roster person number from the respondent interview (C2PERSONNUM); likewise, those added to the pre-Katrina roster after the screener was done will have a C2PERSONNUM value but will not have a value for PERSONNUM.

The variable AFTER_SCREEENR in the HHROST_PUBFIN file identifies those people added by the household respondent after the screener was done.

The 6 people who were mentioned in the screener but who were not listed as a pre-Katrina household member by the household respondent were from the following households:

SAMPLEID = 1102010513 (1 person: a 17-year old male)
SAMPLEID = 1192004613 (2 people: a 24-year old male and a 27-year old male)
SAMPLEID = 1212001311 (3 people: a 50-year old female, a 23-year old female, a 7-year old male)

Adding Pre-Katrina Members Mentioned only by Adult Respondent

We checked the pre-Katrina roster confirmed by the Household Respondent to that done by the Adult Respondent when they were not the same person. This led to adding 16 individuals who were only mentioned on the pre-Katrina roster confirmed by the Adult Respondent to the list of people confirmed by the Household Respondent. Those 16 added individuals are identified by the variable ARONLY_ROST and they will not have any of the detailed information collected on pre-Katrina household members in questions C6–C72 because those questions were only administered to the Household Respondent. Note that the count of pre-Katrina household members, HHCOUNT_REV, includes those only mentioned by the Adult Respondent.

There were 20 households where the Household Respondent was not interviewed but the Adult Respondent was interviewed. Only the Household Respondent was asked detailed questions about other pre-Katrina household members. In those 20 households, then, we only have the basic age, gender, and relationship to the Adult Respondent information on pre-Katrina household members other than the Adult Respondent and nothing else. In the HHROST_PUBFIN file, the variable IWTYPE = 1 identifies the members of these households.

Incorporating Callback Rosters

For households where an Adult Respondent had been interviewed but the Household Respondent had not, a second later attempt (or callback) was made to obtain information on pre-Katrina household members from a proxy respondent. This proxy respondent was only administered the section on pre-Katrina household members (Section C). There were 35 households where a "callback" was completed. Among those 35 households, in 13 of them the Adult Respondent was interviewed, in 21 of them the selected replacement Household Respondent was interviewed and in 1 case a non-selected respondent was interviewed. When the replacement Household Respondent was interviewed, the remaining portion of the respondent interview (Sections CC–M) was also administered.

Because the pre-Katrina roster was to be done by the Household Respondent, we created flags to identify those households where someone other than the Household Respondent provided the roster information. The variable PROXY_HHR = 1 identifies the cases where the pre-Katrina roster was not done by the Household Respondent; PROXY_HHRPNUM has the screener person number of the individual who completed the roster instead; and PROXYHH_RESP = 1 for that person's record in the HHROST_PUBFIN data.

For Deceased: Age at Katrina, Age at Death

The birth date for deceased pre-Katrina household members and the date of death were asked for in the roster section. If a full birth date was given, the CATI program did not ask for the age of the person at the time of Katrina (C8); if a full birth date and a full death date were given, the CATI program did not ask the age at death (C9C). Because only month and year of birth and of death are available on the public use data, we filled the C8 and C9C fields with the computed ages based on the full birth dates and full death dates. This was to have been done by the CATI program but it was not.

Dropping Households Interviewed Twice

There were four instances where the same household was interviewed under two different residences. Below are the household identifiers from the listing file for each pair and noting which was kept.

11960008 (kept)	11960009
11730009 (kept)	11730010
11060050 (kept)	11060051
11360007	11360067 (kept)

The first three pairs listed above were adjacent residences in the listing file and were of the type where one was XXX StreetName and the other was XXX ½ StreetName. In the last pair, the two residences were a block apart and said to be owned by the same household member. The pairs of interviews were all conducted months apart, with at least one of the same respondents

selected. The list of pre-Katrina household members was basically the same in each interview. We chose to keep the first interview done for the pre-Katrina household and drop the second.

For the one case (HHID=11960008) where each interview was done with a HH/Adult respondent who was a different person for each interview, we made the first interview respondent the HHR and the second interview respondent the AR, using the household identifier from the first interview.

Child Module Cleaning

For the Child Module questions, a maximum of three children under age 18 years of female Adult Respondents were selected from the list of own children collected in questions C35–C36 of the household roster. Those selected children who were listed in the pre-Katrina roster did not have Child Module questions CC0–CC14 asked about them as those had previously been covered in the pre-Katrina roster section; they were to be assigned their roster person number so that they could be linked to the information collected about them earlier. The CATI program did not make the correct assignment of pre-Katrina roster person numbers to those selected children in many cases. We had to make the proper assignment *ex post* by checking names, ages, and gender.

Person Numbers in C35/C36 for Children of Pre-Katrina Household members

As part of the Child Module cleaning process, we also corrected the C35/C36 roster person numbers that were incorrectly assigned to any of the children listed in C35/C36 as residing with the given household member at the time of Katrina. These corrections include those children over the age of 17 years as well. This process was a bit trickier because no names were collected in C35/C36, and thus age, gender, and relationship codes were all that could be used. If the given child in C35/C36 was said to be living with the given household member at the time of Katrina, we tried to assign a roster person number where possible. If we could not find a match for a child said to have been living with the given household member at the time of Katrina, we assigned a "-1" code.

There are cases where the C35/C36 questions say that a given child was not living with the given household member at the time of Katrina, but a check of the pre-Katrina household roster shows that child was listed as a pre-Katrina household member. In those cases, we did NOT assign a value into the C35/C36 roster person number variable. It is not clear whether this suggests the given child lived only part-time at the pre-Katrina location or if there was an error or confusion on the respondent's part.

"Other, Specify" Cleaning

A number of questions allowed respondents to report "other" responses when their situation did not correspond to the pre-coded answers listed in the questionnaires. Interviewers typed these textual responses into the CAPI instrument. These textual responses were subsequently hand-coded by DNORS staff either into pre-existing categories or into new categories. When new codes were assigned to "mark all that apply" questions, the indicator variable for "other, specify" response contains the new codes; thus that particular variable will not be a 0/1 indicator. In a few cases, we did not code the "other, specify" responses and have left them for users to decide. These are variables with only a limited number of text responses that generally do not fit existing categories.

Address Cleaning

At the time of the interview, reported addresses were run through the QAS address verification software that greatly improved the quality of those reports. For locations that were not street addresses, however, there were no checks on the quality of the city, state, and country names entered by the interviewers. We subsequently corrected various misspellings where possible to provide uniform spellings for the same city, state, and country.

Non-Response Code Cleaning

In reviewing the blank responses to questions, there were cases—due to CAPI programming oversights—where a "don't know" or "refused" code should have been used instead of a blank. We attempted to correct all such cases so that a blank response signifies that a question was not asked either because it was a legitimate skip or it was because the respondent broke off the interview before that point or data was lost due to a CAPI problem. In the pre-Katrina roster data, those household members who were only mentioned in an Adult-only Respondent interview have no data from Section C of that interview. Rather than assign "break-off"/"data lost"/"not asked" codes to so many variables, we created a set of variables to identify such cases.

WHY_NO_SEC_C: This variable in the HHROST_PUBFIN file explains why a given pre-Katrina household member has no data in variables C19 to C72. The codes are:

0: Household member has Section C data
1: Household member is only found in Adult-only Respondent interview so has no Section C data (NOHHR=1 or ARONLY_ROST=1)
2: Household member is deceased so would only have data in C7–C18
3: Incomplete interview by respondent (includes five household members with lost data)
4: Respondent refused to answer anything about this household member or did not really know anything about the household member

NO_SEC_C: Equals 1 for the five pre-Katrina household members for whom Section C roster data was not output from the Household Respondent's main interview.

IWCOMPLETE: This variable describes the completion status of the main interview by the given respondent and applies to the entire respondent questionnaire and not just the pre-Katrina roster section (Section C). AR_IWCOMPLETE and HR_IWCOMPLETE contain the completion status for the selected Adult Respondent and the Household Respondent for that household. The codes are:

1: Respondent interview complete
3: Partial complete—finished at least Section C
4: Partial complete—broke off in Section C
5: Partial complete—no Section C
6: Proxy HHR—Section C only completed

NO_WORKINFO: Equals 1 if the Adult Respondent or Household Respondent in the roster does not have the work history information in questions C47–C55 and C65–C71 because that selected respondent did not do an individual interview.

Relationship to Adult Respondent: REL_AR

We created a variable called REL_AR that contains the relationship of the given pre-Katrina household member to the Adult Respondent (AR). When the Household Respondent (HHR) was also the AR or when the AR was interviewed, we could easily assign the proper relationship code. However, when the AR was not interviewed, we had to generate the relationship code based mainly on the relationship of the AR to the screener respondent from the screener data and to the HHR from the roster data in comparison to the relationship of the given household member to the screener respondent and HHR. For children of the AR, we could look at the C35/C36 information provided by the HHR. We tried to verify these assignments as best we could. Where it was clear that the given household member was related to the AR but the specific relationship could not be determined, the code for "Other relative" was used. If the relationship to the AR could not be determined, then a "don't know" code was assigned.

Pre-Katrina Spouse Identifier: SPOUSEID

The DNORS did not specifically ask whether the spouse or partner of a given household member was in the pre-Katrina household. For the HHR, the AR and the screener respondent, one can identify a spouse/partner from the relationship code variables. As an aid to users, we created a variable called SPOUSEID that has the household roster ROST_ID value of the spouse/partner if the person is the HHR, AR, screener respondent, or the spouse/partner of these respondents. We could also assign SPOUSEID in those instances where both parents or parents-in-law of the HHR, AR, and/or screener respondent were in the household, making the assumption that if co-habiting in the pre-Katrina household, those parents/parents-in-law were still spouse/partners. Through hand-checks, we could also identify a number of instances where children of the respondents had a spouse/partner in the pre-Katrina household and where siblings of the respondents had a spouse/partner as well. The limitations on the detail of relationship codes and to other information that could confirm married/partnered couples meant that we have likely not identified all such couples in every pre-Katrina household, especially in households with large extended families and with members not related to a respondent. However, we do expect that we have identified the vast majority of them.

Only spouses/partners at the time of Katrina can be identified because the relationship code refers to the situation at the time of Katrina. Note that a spouse/partner of a respondent at the time of Katrina might no longer be a spouse/partner at the time of the DNORS due to death, divorce, or separation. The variable C32 is the current marital status of a pre-Katrina household member and not the status at Katrina. This means that one will see cases where the current marital status in C32 shows the given pre-Katrina household member as not married but a value for SPOUSEID exists, and vice-versa.

Mother/Father Identifiers: MOMID, DADID

The DNORS also did not specifically ask whether a given pre-Katrina household member's birth/adoptive mother or father was in the pre-Katrina household. As with SPOUSEID above, the relationship codes tied to the HHR, AR, and screener respondent were used along with the child identifiers in questions C35/C36 asked for household members age 16+ years who ever gave birth to or fathered or adopted children to identify parent/child combinations. The variables MOMID and DADID were created to contain the ROST_ID value of the resident birth/adoptive mother and father of a given pre-Katrina household member. Again because of relationship code limitations and because 11 percent (173 people) of the non-HHR/non-AR household members age 16+ years did not have the questions about ever-born/adopted children asked,

we may not have identified all parent/child combinations in the pre-Katrina households. In cases where it appears the parent of the child should be in the household but it is unclear exactly which person that is, we assigned a "-1" code to the relevant parent identifier variable. For children under age 18, we examined all cases where no parent had been assigned in order to verify those cases. Likewise, if one parent was identified and that parent had a spouse/partner in the pre-Katrina household, we also hand-checked those to be sure we had not missed coding the other parent.

Note that MOMID and DADID refer only to biological and adoptive parents. Step-parents are not coded except in those cases where the child was listed as an ever-born/adopted child in C35/C36 even though the relationship codes say "step-child". There are also a handful of cases where the grandparent was coded as the parent because the child was listed in the grandparent's list of ever-born/adopted children. Like the step-child, these could be cases of legal adoption but the relationship code given did not reflect that, as opposed to cases where the child was viewed as adopted but no formal paperwork had been done.

Father Identifier in Child Module: CB1_DADID_x

In the Child Module, the eligible female Adult Respondent was asked where the given selected child's father was in August 2005 just before Hurricane Katrina. For those children whose father was said to be living with the respondent, we have created a variable that contains the ROST_ID of child's father: CB1_DADID_1 has the father's roster ID for the first selected child, CB1_DADID_2 has it for the second selected child, and CB1_DADID_3 has it for the third selected child. Because the children selected for the Child Module might not have been in the pre-Katrina household (e.g., if they were born after August 2005), one cannot get the father's roster identifier from the household roster for all selected children. We created the CB1_DADID_x variables to make linking father information easier for Child Module children with a father in the pre-Katrina household.

7. FILE STRUCTURE AND DATA FORMAT

This chapter describes the public use version and restricted versions of the DNORS data. The Restricted Data include detailed geographic location information and a few data items that are not available in the Public Use Data because of confidentiality concerns. For example, variables that are top-coded and bottom-coded or modified for the public use version are generally left in their original form in the restricted version. Below we note the differences between the public use version and the restricted version for each file.

Most of variables that were recoded for the public use version of DNORS files are related to geographic locations. City names for locations mentioned in the DNORS survey are not available in the Public Use Data but will be available in Restricted Data Versions 2 and 3. State and country names in the Public Use Data have been recoded into regions. States in the United States other than Louisiana and Texas are assigned to U.S. Census Division codes. With the exception of Mexico, foreign countries are recoded into world regions as defined by the World Bank. State and country names are available in the restricted data.

The DNORS Public Use Data consists of three main files: screener, pre-Katrina household roster, and individual respondent interview plus two auxiliary files: segment observation and housing unit observation. The DNORS Restricted Data consist of 12 files: three files each for Versions 1, 2, 3, and 4. Information from a single module can be linked to any other module through ID numbers. Restricted Data can be linked with corresponding Public Use Data by ID numbers.

Table 7.1 lists the Public Use Data files, their ID numbers, and the number of records in each file; Table 7.2 covers the Restricted Use Data files; Table 7.3 covers the Public Use Auxiliary Data files. Variable codebooks for the individual Public Use Data files can be found in the Appendices C, D, and E of this document; variable codebooks for the individual Restricted Use Data files can be found in Appendices F through Q.; variable codebooks for the two auxiliary files are in Appendices T and U (the questionnaires for the two auxiliary files are in Appendices R and S).

Public Use Data File Descriptions

Below we describe the contents and structure of each DNORS Public Use Data file.

SCREENER_PUBFIN: Household Screener Interview

SCREENER_PUBFIN has *one record per screened household*. This file contains the listing of residents at the sample address in August 2005 just before Hurricane Katrina from which the Adult Respondent (AR) and Household Respondent (HHR) were selected. It includes the consent questions as well as questions related to the selection of respondents, plus contact information collected for those selected respondents.

HHROST_PUBFIN: Pre-Katrina Household Roster

HHROST_PUBFIN has *one record for each person listed as a resident at the sample address in August 2005* for the 1,380 households where at least one respondent was interviewed. This list is based on the screener listing with any additions/revisions made by the Household Respondent (HHR), or in those cases where the HHR was not interviewed, the interviewed Adult Respondent (AR) or the proxy household respondent (if not the AR). The file contains the

information collected in Section C of the Main Interview from the HHR and the proxy household respondent. For households where the AR was interviewed and was not also the HHR, the data on the AR's own record is from the AR's interview and thus is self-reported.

For households where only the AR was interviewed and no HHR or proxy was interviewed, the file contains just the basic age, gender, and relationship to respondent information on pre-Katrina residents collected in the screener and from the AR—there is no Section C data for these household members except for the AR respondent's own record. The variable WHY_NO_SEC_C = 1 flags such cases.

The order of the household members has the respondent listed first (ROST_ID = 1). The variable C2AREL is the relationship of the given pre-Katrina household member to the respondent. The variables ADULT_RESP, HH_RESP, PROXYHH_RESP, and SCRNR_RESP identify the records of the AR, the HHR, the proxy household respondent, and the screener respondent. The variable CC_CHILD identifies those pre-Katrina resident children who appear in the Child Module and the variable CC_CHILD_NUM indicates the numeric code for each of these three selected children.

The household weight, HU_WGT_S, is on the file.

RESP_IW_PUBFIN: Individual Respondent Interview

RESP_IW_PUBFIN has *one record for each interviewed respondent*: the AR, the HHR, and the proxy household respondent. The variable IWTYPE tells if it was an interview with the AR-only, the HHR-only, or the HHR/Adult (proxy household respondents are treated as HHR-only). The file contains the Section C data reported by the respondent plus the individual interview Sections D to M, and the Child Module for female AR with children under age 18 years. Imputed income measures are also included on this file.

The randomly selected Adult Respondent (AR) weight ADLT_WGT_S is on this file as is the pooled adult respondent weight PAR_WGT_S. The file also has the child weights for the children in the Child Module section (CHILD_WGT1–CHILD_WGT3) and the household weight, HU_WGT_S.

Table 7.1. DNORS Public Use Files and Sample Sizes

File name	File description	Unit of observation	Record Identifiers	Number of records
SCREENER_PUBFIN	Screener	Pre-Katrina household	HHID or screener SAMPLEID	1,557
HHROST_PUBFIN	Pre-Katrina roster	Pre-Katrina household member	HHID, ROST_ID	3,740
RESP_IW_PUBFIN	Individual interview	Household Respondent and Adult Respondent	HHID, ROST_ID, or respondent SAMPLEID if not linking	1,761

Restricted Data File Descriptions

DNORS Restricted Data consists of four levels, or versions, of restriction, each requiring a different level data safeguarding. Data users who are approved to receive a particular version of DNORS Restricted Data receive each of the less-restricted versions of the Restricted Data as well.

- Version 1 Data contain variables describing sensitive behaviors and the original values for top-coded/recoded variables in the Public Use Data plus distances of various locations from the Katrina residence, the respondent's residence, and from parents' residence for children mentioned in the roster and in the child module.
- Version 2 Data contain the city names, ZIP codes, and actual Census tracts for the Katrina residence and current residence and children's residences.
- Version 3 Data contain Census blocks for the Katrina residence and current residence and children's residences.
- Version 4 Data contain the longitude and latitude coordinates for locations plus the day of birth and day of death for the deceased.

Table 7.2. DNORS Restricted Data Files and Sample Sizes

File name	File description	Unit of observation	ID for linking to public use data	No. of records
SCREENER_RESV1	V1: State, distances	Pre-Katrina household	HHID	1,557
SCREENER_RESV2	V2: City, tract, zip			
SCREENER_RESV3	V3: Block			
SCREENER_RESV4	V4: Latitude/longitude			
HHROST_RESV1	V1: State, country, wages, distances	Pre-Katrina household member	HHID, ROST_ID	3,740
HHROST_RESV2	V2: City, tract, zip, 3-digit occ/industry			
HHROST_RESV3	V3: Block			
HHROST_RESV4	V4: Latitude/longitude, day of birth/death for deceased			
RESPIW_RESV1	V1: State, country, wages, (imputed) income, height/weight, damages, distances	Household Respondent and Adult Respondent	SAMPLEID (respondent)	1,761
RESPIW_RESV2	V2: City, tract, zip, 3-digit occ/industry			
RESPIW_RESV3	V3: Block			
RESPIW_RESV4	V4: Latitude/longitude			

Auxiliary Data File Descriptions

The DNORS Auxiliary Data files are part of the public use data. Below we describe the two auxiliary files. Note that these files have not been cleaned in any way. Because these data were only collected for use by the fieldwork team in determining effective use of resources and not collected for research analysis purposes, these data were entered by simple data entry and no checks on skip patterns were done by the data entry program. Users must deal with inconsistencies in responses as they see appropriate.

SEGOBS_PUBFIN: Segment Observations

As mentioned earlier in Chapter 2 (Survey Overview), a short survey on the nature of the selected sample area segments was conducted to assist in determining the assignment of resources for and the timing of the interview effort. The segment observation questionnaire is provided in Appendix R. The observational survey was done in each of the 150 originally selected segments and collected data on estimated proportion of housing units that were unoccupied or vacant, temporary, badly damaged, under repair, and being constructed. The

observer also noted evidence of clutter/litter in the streets, power outages, vandalism, open retail businesses, heavy traffic, and police/private security presence.

HUOBS_PUBFIN: Housing Unit Observations

In conjunction with the segment observations, the state of the individual housing units (HU) at the full set of addresses listed in the segment were observed, whether they were subsequently interviewed or not. The questionnaire is included in Appendix S. For each address in the segment listing, the type of housing unit was recorded, whether it appeared occupied, whether there was evidence of children living there, whether there was evidence of an adult being home during weekdays, what types of barriers to entry existed, what visible damage there was, how extensive and if repairs were underway. For addresses with multiple housing units, the observer listed the number of type at the address/lot. A screener result code has been added along with a flag for whether the HU was one of the 6,078 released HUs. The file contains 7,736 HUs, which is 8 more HUs than the 7,728 HUs that comprise the final sample of dwellings. The additional 8 HUs have values of "20," "30," and "40" in the last two digits of the screener SAMPLEID variable. None of these 8 HUs were located for a possible interview.

Table 7.3. DNORS Auxiliary Files and Sample Sizes

File name	File description	Unit of observation	Record Identifiers	Number of records
SEGOBS_PUBFIN	Segment Observations	Sample Segment	DNORS_SEGMENT	150
HUOBS_PUBFIN	Housing Unit Observations	Pre-Katrina household listing sample line	Screener SAMPLEID	7,736

Contextual Data File Descriptions

We have made available on the DNORS website two contextual data files that were created during the sample design process. These files contain data on general neighborhood characteristics. One file has all 181 Census Tracts (based on geographic codes used in the 2000 Decennial Census) in Orleans Parish and the other file includes all 10,181 Census Blocks (again based on codes from the 2000 Decennial Census) in Orleans Parish. The Census tract file, called NOLA_TR00, includes data from the 2000 Decenial Census on population counts by age, race/ethnicity, nativity, language, employment, income, and tenancy, as well as population density. The Census Block file, called NOLA_BL00, has similar data from the 2000 Decennial Census, as well as estimates of flood depth on 31 August 2005 and 2 September 2005, and of mean elevation. Please see the DNORS website for details (www.rand.org/labor/projects/dnors/data/contextual.html).

Data File Formats

The DNORS data files are available in two formats: SAS and STATA. The individual data file codebooks (the …._cdbk.txt files) were created using the STATA codebook command. They are text files that are provided for users' convenience. They show the full range of values for each variable. The contents of these text files are included in Appendices C through Q and Appendices T and U of this document.

SAS Files

The SAS files are from Unix SAS but can be read by Windows SAS without being converted to transport or export files. The SAS files were created with SAS Version 9.2. There is a set of format libraries as SAS files (".sas7bdat" extension) available in the SAS data zip file which were created with the CNTLOUT= option in PROC FORMAT so they can be used on any platform. The code to regenerate SAS format libraries from these format SAS files is as follows:

```
LIBNAME mylib "location of my format library";
LIBNAME fmtloc "location of DNORS format sas7bdat files";

PROC FORMAT  LIBRARY=mylib.formatfilename  CNTLIN=fmtloc.formatfilename;
```

STATA Files

STATA data files end with the extension .dta. The STATA files were created from the SAS files using Stat/Transfer, a commercially available data conversion program. The STATA files were the processed to add value labels to the variables. They are STATA Version 9 files.

8. DATA CONVENTIONS AND GENERATED VARIABLES

In this chapter we cover a variety of topics that will help users work with the DNORS data files.

Identifier Variables

The main identifier variables in the DNORS are discussed below. These do not necessarily appear in all files.

SAMPLEID is a ten-digit alpha-numeric respondent identifier. The first eight digits are the household identifier and the last two digits are the type of respondent for the given data file: 11 = AR only, 12 = HHR only, 13 = HHR/AR, 10 = Screener respondent. The SAMPLEID variable is found in all three Public Use Data files and in the HUOBS_PUBFIN auxiliary file, and in the SCREENER and RESPIW restricted data files.

HHID is an eight-digit alpha-numeric character household identifier. It is also the first eight digits of SAMPLEID above. HHID is found in all three Public Use Data files and in the HHROST restricted data files.

ROST_ID is a two-digit numeric identifier that is the person number from the pre-Katrina roster for each person in the household. ROST_ID is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files and in the HHROST restricted data files.

PERSONNUM is a two-digit numeric identifier that is the person number from the screener listing of pre-Katrina household residents. The values represent the order of the pre-Katrina residents in the screener and may not be the same as the order of those residents in the Section C roster. The screener respondent always has PERSONNUM = 1. The CATI program changed the order of pre-Katrina household residents so that the individual interview respondent was the first person listed—hence, if the screener respondent was not an individual interview respondent, the order of pre-Katrina residents in the roster would not be the same as that in the screener. PERSONNUM is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

C2PERSONNUM is a two-digit numeric identifier that is from the Section C roster done by the respondent. It is the same as ROST_ID. The roster respondent (who is the household respondent unless the adult respondent was used because no household respondent could be interviewed) always has C2PERSONNUM = 1. C2PERSONNUM is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

ARPNUM is a two-digit numeric identifier that is the screener person number for the selected Adult Respondent. The roster record where PERSONNUM = ARPNUM is the adult respondent. ARPNUM is found in the all three files.

HHRPNUM is a two-digit numeric identifier that is the screener person number for the selected Household Respondent. The roster record where PERSONNUM = HHRPNUM is the selected Household Respondent. HHRPNUM is found in all three files.

PROXY_HHRPNUM is a two-digit numeric identifier that is the screener person number for the proxy Household Respondent. The roster record where PERSONNUM = PROXY_HHRPNUM is the proxy Household Respondent. PROXY_HHRPNUM is found in the HHROST_PUBFIN file.

CC_CHPNUM_1–3 are two-digit numeric identifiers with the ROST_ID value for the given selected child in the Child Module. Only selected children who were in the pre-Katrina household will have values for this variable. Of the 247 children covered in the Child Module, 180 appear in pre-Katrina household rosters. CC_CHPNUM_1–3 are found in the RESP_IW_PUBFIN file.

C35A1, C36CHPNUM1–14 are two-digit numeric identifiers that are the roster numbers of children mentioned in C35 or C36 who currently live with the pre-Katrina household member. These variables are found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

HHR_ROSTID is a two-digit numeric identifier that is the roster person number (i.e., ROST_ID) of the Household Respondent, including the proxy household respondents. HHR_ROSTID is found in the HHROST_PUBFIN file.

AR_ROSTID is a two-digit numeric identifier that is the roster person number (i.e., ROST_ID) of the Adult Respondent. AR_ROSTID is found in the HHROST_PUBFIN file.

IWTYPE is a one-digit numeric identifier that shows the type of respondent from whose interview the given data came. The three types are: AR-only, HHR-only, and HHR/AR. In the HHROST_PUBFIN file, IWTYPE identifies the respondent type from whose interview the roster was created. In the RESP_IW_PUBFIN file, IWTYPE shows the type of respondent associated with the given interview. Note that proxy household respondents who were not also ARs are treated as HHR-only in IWTYPE. IWTYPE is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

ADULT_RESP equals 1 if the given person is the randomly selected Adult Respondent. ADULT_RESP is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

HH_RESP equals 1 if the given person is the selected Household Respondent. HH_RESP is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

CC_CHILD equals 1 if the given person in the roster is one of the selected children in the Child Module. CC_CHILD is found in the HHROST_PUBFIN file.

PROXYHH_RESP equals 1 if the given person is the proxy household respondent interviewed in the callback phase. PROXYHH_RESP is found in the HHROST_PUBFIN file.

SCRNR_RESP equals 1 if the given person in the roster was the screener respondent. SCRNR_RESP is found in the HHROST_PUBFIN file.

A16_PERSON equals 1 if the given roster member was listed as an owner/renter in question A16 of the screener. A16_PERSON is found in the HHROST_PUBFIN file.

A17_PERSON equals 1 if the given roster member was listed as one of those most knowledgeable about the pre-Katrina household. A17_PERSON is found in the HHROST_PUBFIN file.

PROXY_HHR equals 1 if the household interview was completed by a proxy who was not the original Household Respondent nor the replacement Household Respondent. PROXY_HHR is found in the HHROST_PUBFIN file.

CALLBACK equals 1 if the household is one where a proxy household respondent was selected to replace the originally selected household respondent. CALLBACK is found in the HHROST_PUBFIN file.

ARONLY_INT equals 1 for those households where the Household Respondent and the Adult Respondent were not the same person and an Adult Respondent was interviewed. Households with ARONLY_INT = 0 are ones where only the Household Respondent was interviewed or the Household Respondent and Adult Respondent were the same person. ARONLY_INT is found in the HHROST_PUBFIN file.

ARONLY_ROST equals 1 if the given household member was only mentioned by the Adult Respondent and not by the Household Respondent. These individuals will not have any of the detailed Section C information collected on pre-Katrina household members. ARONLY_ROST is found in the HHROST_PUBFIN file.

AFTER_SCREENER equals 1 if the given household member was mentioned after the screener household listing was done. These are individuals whom the HHR or AR added to the list of pre-Katrina household members from that provided at the time of the screener. AFTER_SCREENER is found in the HHROST_PUBFIN file.

SPOUSEID is a two-digit identifier that contains the roster person number of the spouse/partner of the given household member. This variable was created *ex post* and is described in Chapter 6. SPOUSEID is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

MOMID is a two-digit identifier that contains the roster person number of the biological/adoptive mother of the given household member. This variable was created *ex post* and is described in Chapter 6. MOMID is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

DADID is a two-digit identifier that contains the roster person number of the biological/adoptive father of the given household member. This variable was created *ex post* and is described in Chapter 6. DADID is found in the HHROST_PUBFIN and RESP_IW_PUBFIN files.

CB1_DADID_x is a two-digit identifier that contains the roster person number of the father of the given selected child in the Child Module if the father was said to be in the pre-Katrina household (i.e., CB1_x = 1). CB1_DADID_x is found in the RESP_IW_PUBFIN file.

HHCOUNT_REV is the number of pre-Katrina household members mentioned by either the Household Respondent or the Adult Respondent and thus includes those with ARONLY_ROST=1. It is found in the HHROST_PUBFIN file.

Variable Naming Conventions

Variable names for specific questions asked begin with a character prefix that identifies the given interview question number to which the variable belongs.

Variables generated by the CATI program do not have prefixes because they were given descriptive variable names. Variables have variable labels to help users identify those with names not directly tied to a question number.

Item Non-Response Codes

The DNORS programming mainly used the special missing code ".d" for "don't know" responses and the code ".r" for "refused." Character variables used alphabetic codes like "D," "DK," "R," "REF," and so on.

The variable IWCOMPLETE in HHROST_PUBFIN and RESP_IW_PUBFIN identifies partially completed interviews.

In general, blank values mean that the question was not asked because of the skip pattern. For respondents who broke-off the interview, all responses to questions following the break-off will be blank.

The variable WHY_NO_SEC_C in the HHROST_PUBFIN file identifies those pre-Katrina household members for whom no Section C data (questions C19–C72) was collected and thus have blank values for that data, and why they have no data.

The variable NO_SEC_C in HHROST_PUBFIN identifies the five cases where Section C data was collected but the data was not output due to a CATI programming problem. These five cases are coded as "incomplete interview" in WHY_NO_SEC_C for convenience.

Date Variables

All dates asked of respondents are presented as separate variables for each date component: a month variable, a day variable if relevant, and a year variable. Only the IWSTARTDATE and IWENDDATE generated by the CATI program are not in that form. Those dates are numeric and represent the number of days since Jan 1, 1960, for which we have attached value formats that translate the numeric count into a standard date format: for SAS, it is MM/DD/YYYY and for Stata, DD MMM YYYY).

Geographic Location Variables

In the Public Use Data, geographic variables report state and country information recoded into U.S. Census divisions and World Bank world regions. Louisiana and Texas are the only states identified separately; other states are coded according to the appropriate U.S. Census division. These divisions are:

(1) *New England*: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont;
(2) *Middle Atlantic*: New Jersey, New York, and Pennsylvania;
(3) *East North Central*: Indiana, Illinois, Michigan, Ohio, and Wisconsin;
(4) *West North Central*: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota;
(5) *South Atlantic*: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia;
(6) *East South Central*: Alabama, Kentucky, Mississippi, and Tennessee.
(7) *West South Central*: Arkansas, and Oklahoma (excludes Louisiana and Texas);
(8) *Mountain*: Arizona, Colorado, Idaho, New Mexico, Montana, Utah, Nevada, and Wyoming; and
(9) *Pacific*: Alaska, Hawaii, Oregon, Washington, California

Locations outside the U.S. are coded into the seven World Bank world regions, with only Mexico identified separately. Please check the World Bank web site for details on which countries are included in each region. The World Bank regions are:

(1) *Europe and Central Asia;*
(2) *Middle East and North Africa;*
(3) *Sub-Saharan Africa;*
(4) *South Asia;*
(5) *East Asia and the Pacific;*
(6) *Latin America and the Caribbean*, (excluding Mexico)*;* and
(7) *North America* (excluding the U.S.).

The recoded state and country variables end with the suffix of "R" in the Public Use Data. Actual state and country names are available in Version 1 of the Restricted Data. City names are available in Version 2 and higher of the Restricted Data. We corrected and standardized the spelling of city, state, and country names wherever possible. However, in cases where the location was unclear or ambiguous, the text was not modified.

Addresses collected in the DNORS were geocoded. The longitude and latitude coordinates are available in the Version 4 Restricted Data. If a zip code was reported but the address could not be geocoded, the coordinates of the zipcode centroid was used; if the address could not be geocoded and no zip was reported or if only a city was reported, then the coordinates for the city centroid were used. The geocode match quality flags discussed below identify such zip- and city-centroid assignments.

In the Public Use Data, we created the following four variables to help users easily identify the geographic locations of DNORS individuals:

WHERENOW:	Current location of pre-Katrina household member
CC_WHERENOW:	Current location of selected child in Child Module
WHERE1YRAGO:	Where resided 1 year before the survey
CC_WHERE1YRAGO:	Where selected child resided 1 year before the survey

The variable WHERENOW identifies pre-Katrina household members who still lived at the Katrina address versus those who still lived in New Orleans but at a different address versus those who no longer lived in New Orleans at the time of the DNORS. We created a similar variable (CC_WHERENOW_1–CC_WHERENOW_3) for the children listed in the Child Module because not all of them were pre-Katrina household members.

We created a variable called WHERE1YRAGO for the location where pre-Katrina household members lived one year before the DNORS interview. For children listed in the Child Module, the variables CC_WHERE1YRAGO_1–CC_WHERE1YRAGO_3 contain this same location information.

The variable values for these measures are:

-8 = Unknown
1 = At Katrina address
2 = In New Orleans (Orleans Parish)
3 = In the greater New Orleans area (Jefferson, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, and St. Tammany Parishes)

4 = Outside New Orleans
5 = Deceased

Geocoding Quality Flags

A match quality variable was created to help users assess the quality of geocoding. These geocode quality flag variables have a suffix of _QUALFLG. The variable values are:

0 = Unable to geocode
1 = Matched by SAS/GIS routine: with a score of 70 or more, or matched by the UMD routine
2 = Matched by QAS: code four
3 = Zip centroid
4 = City centroid
5 = Foreign country

Values of "1" and "2" mean that the street address was located and geocoded. A value of "3" means while the street address could not be located, the zip code was identified and the coordinates of the center of the zip code area are used. A value of "4" means the location only had a valid city name and the city centroid was assigned. We did not attempt to geocode areas outside the United States and such locations are coded as "foreign country" in the geocode quality flags.

Street addresses collected in the DNORS were geocoded once using the PROC GIS procedure in SAS and once by the QAS contractor. A matching score of 70 and over in PROC GIS generally indicates a good match on street name and number. The QAS scoring category of "four" indicates a good match under the system used there. Because RAND did the SAS/GIS coding, we know what the process was and used it as our first choice over the QAS system that was not specifically defined. Note that in some cases, the QAS procedure located addresses that the SAS/GIS procedure could not and we used the QAS results in those cases. City-only addresses were geocoded by PROC GIS and are assigned a city centroid that is the average of the zip centroids for the city.

As a crosscheck to the SAS/GIS and QAS results, addresses were also geocoded by staff at the Geography Department of the University of Maryland (UMD). The ArcGIS SPATIALJOIN procedure, which uses Census Bureau TIGER files, was the method used to assign Census tracts and blocks. Coordinates were obtained by interfacing with Google's geocoding service using code written in Python. These coordinates also served as input to the ArcGIS procedure to determine 2000 and 2010 Census tracts and blocks when street address and zip code alone were not sufficient to do that under SPATIALJOIN. The geocoded results from the UMD data were compared to the pooled SAS/GIS and QAS results. Discrepancies for tract assignments geocoded by both sources were investigated using the Census Bureau's American FactFinder website to determine which source was correct in the assignment of Census tracts and blocks. Among the 445 addresses geocoded by both SAS/GIS and UMD that differed according to the assigned Census tract, the UMD result was used for 83 of them. After review, places that were geocoded by UMD but not SAS/GIS were assigned the UMD results (approximately 5% of all addresses).

Distance Variables: _KDISTG, _RDISTG, _PDISTG, _KDIST, _RDIST, _PDIST

The geodetic distances between the Katrina residence and other residences mentioned have been generated from the longitude and latitude coordinates obtained from geocoding. These were created using the GEODIST function in SAS. The geodetic distances between the respondent's current residence and other residences mentioned have also been created. For the pre-Katrina residents' children mentioned in C35B and C36A of the household roster, we also created the distance of that child's residence from that of the given pre-Katrina household member. All distances are in miles.

In the Public Use data, these distances are available in categorical form with variables ending in _KDISTG for the distance from Katrina residence and ending in _RDISTG for the distance from the respondent's current residence. Those ending in _PDISTG are for the distance to the child's parent's residence where the parent is the given pre-Katrina household member. The categories are based on the quartile values for that distance. For example, the quartiles used for C35B and C36A are based on distances reported across all children of the pre-Katrina household member as opposed to the distances for a child of a given order in the list of children; quartiles used for C61A and C61B are based on the distances reported across both mothers and fathers as opposed to just mothers for C61A and just fathers for C61B. Note that the locations reported in C35B, C36A, C61A, and C61B were cities only so the corresponding distances are between the Katrina/respondent/parent residence and the city where the child in C35B/C36A lives or where the parent in C61A/C61B lives—it is not the distance to the actual residence. The general structure of the categorical values is:

0 = Zero miles
1 = Non-zero minimum ≤ distance ≤1st quartile
2 = First quartile < distance ≤ median
3 = Median < distance ≤ third quartile
4 = Third quartile < distance ≤ maximum

Value labels for the grouped variables tell users what ranges in miles each quartile represents.

The actual geodetic distances are available in the Version 1 Restricted Data. Variables ending in _KDIST represent distances from the Katrina residence, those ending in _RDIST represent distances from the respondent's current residence, and those ending in _PDIST represent distances from the given parent's residence (only exists for C35B and C36A distances collected in the household roster).

Note that the _PDISTG and _PDIST variables for C35B and C36A are not in the RESP_IW data files because they are just a repeat of the _RDISTG and _RDIST variables as the respondent is also the parent.

Census Tracts and Blocks

Census tract and block numbers for street addresses collected in the Screener and in the Main Interview were assigned using the longitude and latitude coordinates generated by the geocoding process. If a street address could not be geocoded, no census tract or block was assigned. There are two sets of tract and block numbers: one set are based on the 2000 Census tract definitions and the other on the 2010 Census tract definitions.

No census tract or block variables are available in the Public Use Data. Census tract variables are available in the Restricted Version 2 data. Census block variables are in Restricted Version 3 data.

Sampling Segments

The DNORS sample area consisted of 149 area segments in Orleans Parish. These area segments were Census block clusters formed to have a minimum number of housing units. The variable DNORS_SEGMENT identifies the area segment for each address at the time of Katrina, which represents the Secondary Sampling Unit (SSU) for DNORS. In DNORS, the Primary Sampling Unit (PSU) is Orleans Parish from which is where all SSUs were selected. DNORS_SEGMENT is found in the three Public Use Data files and in the SEGOBS_PUBFIN auxiliary data file.

Top-Coding of Variables

Household Income and Household Losses

In the Public Use Data, the values for current household income, pre-Katrina household income, and the value of household losses due to Katrina have been top-coded at the 95th percentile to remove confidentiality concerns. Current household income (M1) and pre-Katrina household income (M2) were top-coded at $300,000, and household losses (D18) were top-coded at $400,000. The imputed versions of these variables were also top-coded at the 95th percentile: M1_IMP at $200,000, M2_IMP at $170,000, and D18_IMP at $400,000. The actual values of the household income and household losses variables are available in Restricted Version 1 Data.

Table 8.1. Summary Statistics for Household Income and Damage Loss Variables before Top-Coding, for Nonzero Values, in Dollars

	Variable		
	M1	**M2**	**D18**
N	1,225	1,235	1,424
Mean	68,604.66	70,582.56	126,102.04
Std. dev.	144,162.79	149,597.38	221,491.40
Minimum	74	188	90
10th percentile	9,000	10,800	5,000
20th percentile	15,000	19,000	15,000
30th percentile	22,000	25,000	25,000
40th percentile	30,000	34,000	45,000
50th percentile	40,000	45,000	70,000
60th percentile	50,000	55,000	100,000
70th percentile	70,000	70,000	150,000
80th percentile	90,000	90,000	200,000
90th percentile	130,000	130,000	300,000
Maximum	3,000,000	3,000,000	5,000,000

Table 8.1 shows the distribution of the non-imputed M1, M2 and D18 variables before top-coding was done. Table 8.2 shows the distribution of the imputed M1, M2, and D18 variables before top-coding was done.

Table 8.2. Summary Statistics for Imputed Household Income and Damage Losses before Top-Coding, for Nonzero Values, in Dollars

	Variable		
	M1_IMP	**M2_IMP**	**D18_IMP**
N	1,746	1,743	1,650
Mean	63,092.85	62,046.99	127,180.20
Std. dev.	128,512.77	129,705.25	224,443.15
Minimum	74	188	90
10^{th} percentile	7,500	9,600	6,000
20^{th} percentile	12,000	16,000	15,000

60^{th} percentile	45,000	50,000	100,000
70^{th} percentile	63,000	60,000	150,000
80^{th} percentile	85,000	80,000	200,000
90^{th} percentile	130,000	125,000	300,000
Maximum	3,000,000	3,000,000	5,000,000

Wage Earnings

Average earnings were top-coded at the 95^{th} percentile. Current average pay (C53) and pre-Katrina average pay (C69) were top-coded to correspond with a maximum annual salary of $150,000 per year. The actual values for the average pay variables are available in the Restricted Version 1 Data. Table 8.3 shows the distributions of salary/wages before top-coding.

Table 8.3. Summary Statistics for Non-Zero Salary/Wages before Top-Coding, in Dollars

	Current average pay: C53			
	Hourly	Weekly	Monthly	Annual
N	298	67	48	282
Mean	14.50	515.30	2,554.79	72,370.30
Std. dev.	10.93	377.02	1,697.84	58,690.55
Minimum	5.25	50.00	150.00	1,400.00
10^{th} percentile	7.35	180.00	1,000.00	32,000.00

Maximum	60.00	1,900.00	5,500.00	400,000.00

Height and Weight

Self-reported height and weight were bottom-coded at the 1st percentile and top-coded at the 99th percentile by gender in the sample. Height and weight were only asked of the main interview respondents. Weight (F2) was bottom-coded at 100 pounds for women and 120 pounds for men, and top-coded at 300 pounds for women and 315 pounds for men. Height (F3) was bottom-coded at 58 inches for women and 63 inches for men, and top-coded at 71 inches for women and 77 inches for men.

Actual values of self-reported height and weight are available in the Restricted Version 1 Data.

Occupation and Industry Codes

DNORS collected text responses on the type of occupation and industry related to the respondent's current job (C48, C50) and the job at the time of Katrina (C64 and C66). The text responses were assigned three-digit occupation and industry codes by staff at the University of Michigan using the standard coding protocols associated with the Panel Study of Income Dynamics. The occupation and industry codes are from the 2000 Census. For the Public Use data, we created an occupation grouping with 25 categories and an industry grouping with 19 categories from the three-digit code frame and we have included the first two digits of the three-digit code. Appendix B contains the list of three-digit occupation and industry codes used. Below are the categories used in the occupation and industry groupings variables (C48OCCGRP, C64OCCGRP, C50INDGRP, and C66INDGRP).

Occupation groupings

1. Management occupations
2. Business Operations specialists
3. Financial specialists
4. Computer and mathematical occupations
5. Architecture and engineering occupations
6. Life, physical and social science occupations
7. Community and social services occupations;
8. Legal occupations
9. Education, training, library occupations
10. Arts, design, entertainment, sports, media occupations
11. Healthcare practitioners and technical occupations
12. Healthcare support occupations
13. Protective service occupations
14. Food Preparation and Serving occupations
15. Building and grounds cleaning and maintenance occupations
16. Personal care and service occupations
17. Sales occupations
18. Office and administrative support occupations
19. Farming, fishing, and forestry occupations
20. Construction trades
21. Extraction workers
22. Installation, maintenance and repair workers
23. Production occupations
24. Transportation and material moving occupations
25. Military specific occupations

Industry groupings

1. Agriculture, forestry, fishing, and hunting
2. Mining
3. Utilities
4. Construction
5. Manufacturing
6. Wholesale trade
7. Retail trade
8. Transportation and warehousing
9. Information
10. Finance and insurance
11. Real estate and rental and leasing
12. Professional, scientific and technical services
13. Management, administrative and support, and waste management
14. Educational services
15. Health Care and Social Assistance
16. Arts, Entertainment, and Recreation
17. Accommodations and food services
18. Other services (except public administration)
19. Public administration and active duty military

Imputed Income and Value Losses

We imputed current household income (M1) and pre-Katrina household income (M2) along with the value of hurricane damage to respondents' properties (D17 and D18) for cases where respondents could not report a value. Details of the imputation process can be found in Appendix A of this document. In the Public Use Data, the imputed values have been top-coded as described above. The Restricted Version 1 Data contains the actual imputed values.

K6 (Mental Illness) Scale

The K6 scale of non-specific psychological distress was used to screen for anxiety and mood disorders in the previous 30 days.[1] The K6 is widely used in the U.S. as a screener for mental illness, and has been used in other research to examine the psychological effects of Hurricane Katrina. It has been shown to provide good validity in assessing mental illness.

Questionnaire items H1a–H1f were used to create the variable K6_SCORE, which is the sum of the responses to those six questions after reverse recoding the responses (i.e., the code of "5" for "none at all" was recoded to "0", the code of "4" for "a little of the time" was recoded to "1", and so on with the code of "1" for "all the time" recoded to "4"). K6_SCORE was only created if the respondent answered all six questions.

[1] Kessler, R.C., G. Andrews, L.J. Colpe, E. Hiripi, K.D. Mroczek, S.L. Normand, E.E. Walters, and A.M. Zaslavsky, 2002, "Short screening scales to monitor population prevalences and trends in non-specific psychological distress," *Psychological Medicine* 32:959–976. Kessler, R.C., P.R. Barker, L.J. Colpe, J.F. Epstein, J.C. Gfroerer, E. Hiripi, M.J. Howes, S.L. Normand, R.W. Manderscheid, E.E. Walters, and A.M. Zaslavsky, 2003, "Screening for serious mental illness in the general population," *Archives of General Psychiatry* 60:184–189.

The variable K6 is a categorized version of K6_SCORE where values of 8 or less have K6 = 0 (not a case of mental illness), values of 8–12 have K6 = 1 (mild to moderate mental illness), and values of 13 or more have K6 = 2 (serious mental illness). K6 was used to create the indicator variables K6R_ANY (equals 1 if K6 = 1 or K6 = 2) and K6R_SPD (equals 1 if K6 = 2) for a quick way of identifying those with any mental distress and those with serious mental distress, respectively.

Behavior Problems Index (BPI)

The child Behavior Problems Index (BPI), developed by Peterson and Zill from the more extensive Achenbach Behavior Problems Checklist,[2] was administered in the DNORS Child Module (questions CE1–CE1ff). There are a number of different versions of the Child BPI available; DNORS used the version from the Panel Study of Income Dynamics (PSID) Child Development Supplement.

The Behavior Problems Index was designed to assess children's behavior problems, including anxiety, depression, and aggression. The BPI was originally intended for use with children aged 4 years and older. The DNORS asked BPI questions for children aged 3–17 years. The original instrument has 28 items, which make up three subscales: internalizing, externalizing, and total. The internalizing scale assesses the presence of withdrawn and sad behaviors. The externalizing score provides a measure of the presence of aggressive and related behaviors. The total score provides an overall measure of problem behaviors, reflecting both externalizing and externalizing behaviors.

The National Longitudinal Survey of Youth (NLSY) included four additional items pertaining to older children, such as "He/She has been hanging around with kids who get into trouble." DNORS included those four items as questions CE1aa–CE1dd. However, these four items were not included in the internalizing, externalizing, and total behavior scores. The NLSY data was used to create six behavior subscales—antisocial, anxious/depressed, hyperactive, headstrong, dependent, and peer conflicts—which we have also created for the DNORS (see Table 8.5, below, and NLSY79[3] for more information).

Female Adult Respondents who did the Child Module responded to the BPI questions using a three-point Likert scale that indicated how true each statement was of their child: "1" if the statement is often true, "2" if the statement is sometimes true, and "3" if the statement is not true. In computing the three primary BPI scales (internalizing, externalizing, and total) and the various subscales, the coding of items was reversed (often true = "2"; sometimes true = "1"; and not true = "0") so that a lower number indicates fewer behavior problems. Scores were produced by summing each individual's responses across all items that belong to that scale or subscale. A score was not created if any component item was missing. In addition to the subscale scores listed in the tables below, we created a variable for each score that shows how many items were missing for each child.

Table 8.4. Behavior Problems Index Subscales in DNORS

Item from Parent Questionnaire	Internalizing (BPIINT)	Externalizing (BPIEXT)	Total (BPITOT)
CE1ee. Disobedient at school		X[a]	X
CE1ff. Has trouble getting along with teachers		X[a]	X
CE1a. Has sudden changes in mood or feeling		X	X
CE1b. Has felt or complained that no one loved him/her	X		X
CE1c. Has been rather high strung, tense and/or nervous		X	X
CE1d. Has cheated or told lies		X	X
CE1e. Has been too fearful or anxious	X		X
CE1f. Has argued too much		X	X
CE1g. Has had difficulty concentrating; has not been able to pay attention for long		X	X
CE1h. Has been easily confused and/or has seemed to be in a fog	X		X
CE1i. Has bullied or has been cruel or mean to others		X	X
CE1j. Has been disobedient		X	X
CE1k. Has not seemed to feel sorry after he/she has misbehaved		X	X
CE1l. Has had trouble getting along with other children		X	X
CE1m. Has been impulsive or has acted without thinking		X	X
CE1n. Has felt worthless or inferior	X		X
CE1o. Is not liked by other children	X		X
CE1p. Has had a lot of difficulty getting his/her mind off certain thoughts	X		X
CE1q. Has been restless or overly active; has not been able to sit still		X	X
CE1r. Has been stubborn, sullen, or irritable		X	X
CE1s. Has had a very strong temper and has lost it easily		X	X
CE1t. Has been unhappy, sad or depressed	X		X
CE1u. Has been withdrawn, and/or has not gotten involved with others	X		X
CE1v. Has broken things on purpose or deliberately destroyed his/her own or another's things		X	X
CE1w. Has been clinging to adults	X		X
CE1x. Has cried too much	X		X
CE1y. Has demanded a lot of attention		X	X
CE1z. Has been too dependent on others	X		X
CE1aa. Has felt others were out to get him/her			
CE1bb. Has been hanging around with kids who get into trouble			
CE1cc. Has been secretive, and/or has kept things to him/herself			
CE1dd. Has been worrying too much			
Number of Items	11	17	28
Alpha level	0.73	0.87	0.89

Note: Codes in the questionnaire have been reverse-recoded before summation to create scores.
[a] Excludes children not in school.

For those interested in comparing the DNORS BPI data with those from the NLSY and the Panel Study of Income Dynamics (PSID), items CE1a–CE1z from DNORS should be used. Items CE1ee and CE1ff, which are in DNORS, were not included in the NLSY and PSID. DNORS asked questions CE1ee and CE1ff for children who were in school or kindergarten.

Items CE1a–CE1ff are in the Child Module section. Table 8.4 lists the BPI items in DNORS. An 'X' indicates which items were used to compute internalizing, externalizing, and total BPI scores. Alpha levels for the all the scales are also shown in Tables 8.4 and 8.5. (Alphas indicate how

well a set of items measures a single underlying construct; generally, alpha levels higher than 0.60 are regarded as satisfactory measures of a construct.) The BPI variables in DNORS were generated for each child and the variable names with a suffix of "1" are those for the first child, a suffix of "2" are those for the second child, and a suffix of "3" are those for the third child.

Table 8.5. Additional Child Behavior Problems Index Scales created for DNORS

Scale (var. name)	Item
Antisocial	CE1d. Has cheated or told lies
(BPIANTI)	CE1i. Has bullied or has been cruel or mean to others
Alpha level = 0.68	CE1k. Has not seemed to feel sorry after he/she has misbehaved.
	CE1v. Has broken things on purpose or deliberately destroyed own or other's things
	CE1ee. Is disobedient at school
	CE1ff. Has trouble getting along with teachers
Anxious/Depressed	CE1a. Has sudden changes in mood or feeling
(BPIANXDP)	CE1b. Has felt or complained that no one loved him/her
Alpha level = 0.64	CE1e. Has been too fearful or anxious
	CE1n. Has felt worthless or inferior
	CE1t. Has been unhappy, sad or depressed
Hyperactive	CE1g. Has had difficulty concentrating, and/or has not been able to pay attention for long
(BPIHYPER)	CE1h. Has been easily confused and/or has seemed to be in a fog
Alpha level = 0.70	CE1m. Has been impulsive or has acted without thinking
	CE1p. Has had a lot of difficulty getting his/her mind off certain thoughts (had obsessions)
	CE1q. Has been restless or overly active, and/or has not been able to sit still
Headstrong	CE1c. Has been rather high strung, tense and/or nervous
(BPIHEAD)	CE1f. Has argued too much
Alpha level = 0.77	CE1j. Has been disobedient
	CE1r. Has been stubborn, sullen, or irritable
	CE1s. Has had a very strong temper and has lost it easily
Dependent	CE1w. Has been clinging to adults
(BPIDEP)	CE1x. Has cried too much
Alpha level = 0.66	CE1y. Has demanded a lot of attention
	CE1z. Has been too dependent on others
Peer conflicts	CE1l. Has had trouble getting along with other children
(BPIPEER)	CE1o. Is not liked by other children
Alpha level = 0.62	CE1u. Has been withdrawn, and/or has not gotten involved with others

Note: Codes in the questionnaire have been reverse-recoded before summation to create scores.

PTSD Checklist (PCL)

The PTSD Checklist (PCL) was used to assess post-traumatic stress disorder (PTSD).[4] The PCL includes 17 questions that correspond to each of the single items that together comprise the symptoms of PTSD from the *Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition* (DSM-IV). The PCL in DNORS is focused on respondents' Katrina-related experiences.

[4] Weathers, F., B. Litz, D. Herman, J. Huska, and T. Keane, 1993, "The PTSD Checklist (PCL): Reliability, validity, and diagnostic utility," paper presented at the Annual Convention of the International Society for Traumatic Stress Studies, San Antonio, TX. Andrykowski, M.A., M.J. Cordova, J.L. Studts, and T.W. Miller, 1998, "Posttraumatic stress disorder after treatment for breast cancer: Prevalence of diagnosis and use of the PTSD Checklist Civilian Version (PCL-C) as a screening instrument," *Journal of Consulting and Clinical Psychology* 66:586–590. Blanchard, E.B., J. Jones-Alexander, T.C. Buckley, and C.A. Forneris, 1996, "Psychometric properties of the PTSD Checklist (PCL)," *Behaviour Research and Therapy* 34:669–673.

Questionnaire items L1–L17 were used to create the variable PCL_TOTAL, the sum of the responses to L1–L17 for those who answered all 17 questions. The codes for L1–L17 run from "1" (not at all) to "5" (extremely) in response to those 17 questions which begin "In the last month, how much have you been bothered by […]?"

The indicator variable PTSD_DIAG is based on the DSM-IV diagnostic rule for a diagnosis of PTSD. For that diagnosis of PTSD (PTSD_DIAG = 1), the following conditions must be met:

1. At least one of the following items must have been experienced at least moderately in the last month:
   - Repeated, disturbing memories, thoughts or images of Katrina (L1)
   - Repeated, disturbing dreams of Katrina (L2)
   - Suddenly acting or feeling as if Katrina was happening again (L3)
   - Feeling very upset when something reminded you of Katrina (L4)
   - Having physical reactions when something reminded you of Katrina (L5)

2. At least three of the following items must have been experienced at least moderately in the last month:
   - Avoiding thinking about or talking about Katrina or avoiding having feelings related to it (L6)
   - Avoiding activities or situations because they reminded you of Katrina (L7)
   - Trouble remembering important parts of Katrina (L8)
   - Loss of interest in activities that you used to enjoy (L9)
   - Feeling distant or cut off from other people (L10)
   - Feeling emotionally numb or being unable to have loving feelings for those close to you (L11)
   - Feeling as if your future will somehow be cut short (L12)

3. At least two of the following items must have been experienced at least moderately in the last month:
   - Trouble falling or staying asleep (L13)
   - Feeling irritable or having angry outbursts (L14)
   - Having difficulty concentrating (L15)
   - Being "super alert" or watchful or on guard (L16)
   - Feeling jumpy or easily startled (L17)

Patient Health Questionnaire for Depression (PHQ-9)

The nine-item Patient Health Questionnaire (PHQ-9) was used to assess major depression.[5] The PHQ-9 assesses symptoms and functional impairment, in order to determine the likelihood a respondent has major depression, and also assesses the severity of the respondent's symptoms. The PHQ-9 is based on the diagnostic criteria from the DSM-IV. Questionnaire items

[5] Kroenke, K., and R.L. Spitzer, 2002, "The PHQ-9: A new depression and diagnostic severity measure," *Psychiatric Annals* 32:509–521. Spitzer, R., K. Kroenke, and J. Williams, 1999, "Validation and utility of a self-report version of PRIME-MD: The PHQ Primary Care Study," *Journal of the American Medical Association* 282:1737–1744. Kroenke, K., R.L. Spitzer, and J.B. Williams, 2001, "The PHQ-9: Validity of a brief depression severity measure," *Journal of General Internal Medicine* 16:606–613. Pinto-Meza, A., A. Serrano-Blanco, M.T. Penarrubia, E. Blanco, and J.M. Haro, 2005, "Assessing depression in primary care with the PHQ-9: Can it be carried out over the telephone?" *Journal of General Internal Medicine* 20:738–742.

G1–G10 were used in the creation of PHQ9 measures PHQ9_DEPRESSED, PHQ9_SCORE, and PHQ90_SCORE_CAT.

The indicator variable PHQ9_DEPRESSED (likely depressed) equals "1" if all the following conditions are met:

1. At least one of the following items must have been experienced at least more than half the days in the last two weeks:
   • Little interest or pleasure in doing things (G1)
   • Feeling down, depressed, or hopeless (G2)

2. At least five of the following six items must have been experienced at least more than half the days in the last two weeks:
   • Trouble falling or staying asleep, or sleeping too much (G3)
   • Feeling tired or having little energy (G4)
   • Poor appetite or overeating (G5)
   • Feeling bad about yourself or that you are a failure or have let yourself or you family down (G6)
   • Trouble concentrating on things, such as reading the newspaper or watching television (G7)
   • Moving or speaking so slowly that other people could have noticed, or the opposite, being so fidgety or restless that you have been moving around a lot more than usual (G8)

   OR have experienced this item at least several days in the last two weeks:
   • Thoughts that you would be better off dead or hurting yourself in some way (G9)

3. The problems or feeling above made it somewhat to extremely difficult for you to do your work, take care of things at home, or get along with other people (G10).

The variable PHQ9_SCORE is the sum of the recoded responses to items G1 to G9 where the original response of "1" (not at all) was recoded to "0", the response of "2" (several days) recoded to "1", and so on with the response of "4" (nearly every day) recoded to "3". PHQ9_SCORE is only generated for those who answered all nine questions. The variable PHQ9_SCORE_CAT is a categorized version with the following values:

0: Score of 0–4 (no symptoms of depression)
1: Score of 5–9 (minimal symptoms of depression)
2: Score of 10–14 (major depression, mild)
3: Score of 15–19 (major depression, moderately severe)
4: Score of 20 or more (major depression, severe)

Perceived Stress Scale (PSS)

DNORS used the Perceived Stress Scale (PSS) to assess respondents' experiences of psychological stress.[6] The PSS items were designed to assess the degree to which respondents found the circumstances in their lives to be unpredictable, uncontrollable, and

[6] Cohen, S., T. Kamarck, and R. Mermelstein. 1983. "A global measure of perceived stress," *Journal of Health and Social Behavior* 24:385–396. Cohen, S., and G. Williamson, 1988, "Perceived stress in a probability sample of the United States," in S. Spacapam and S. Oskamp (eds.), *The social psychology of health: Claremont Symposium on applied social psychology*, Newbury Park, CA: Sage.

overloaded. It provides a general measure of perceived stress, rather than the experience as a result of specific stressor. DNORS used a four-item version of the scale and those items are questions J1–J4.

The variable PSS_4 is a summary score based on the recoded responses to questions J1–J4. For the creation of PSS_4, questions J1 and J4 were recoded so that an original response of “1” (never) was changed to “0”, an original response of “2” (almost never) was changed to “1”, and so on with an original response of “5” (very often) was changed to “4”. Questions J2 and J3 were also recoded but in a different manner: an original response of “1” (never) was recoded to “4”, and original response of “2” (almost never) was recoded to “3”, and so on with an original response of “5” (very often) recoded to “0”. PSS_4 was only generated for those who responded to all four questions.

9. IDENTIFYING HOUSEHOLDS AND INDIVIDUALS

This chapter discusses how to identify various types of household and individuals in the DNORS sample.

Households

In the DNORS, the main pre-Katrina household identifier is HHID, an 8-digit character variable.

Individuals

The variable ROST_ID is the person number from the pre-Katrina household roster. An individual is uniquely defined by the combination of HHID and ROST_ID.

Those pre-Katrina household members listed in the screener have a value for PERSONNUM, the person number from the screener. The combination of HHID and PERSONNUM uniquely identifies those listed in the screener.

Selected Child for Child Module

The variable CC_CHILD identifies those pre-Katrina household members who were selected for the Child Module. Note that the Child Module selection process included children who were born after Katrina as well as those who were not living with the female Adult Respondent at the time of Katrina.

For selected children not in the pre-Katrina household, the variable CC_CHILD_NUM can be used to show which of the children listed in C36CHNUMx series were selected if the female adult respondent had more than one child (i.e., C33 > 1). Although the age and gender of the child is asked again in the Child Module section (CC_CHAGE, CC_CHSEX), the location of the child at the time of Katrina was only asked in the C36 set of questions.

Household Head

In the DNORS, no one has been specifically identified as the household head. In the pre-Katrina household roster, the relationships are relative to the Household Respondent (HHR), except in the few cases where no HHR was interviewed and the pre-Katrina roster is from the Adult Respondent interview. The variable A16_PERSON identifies the pre-Katrina household member or members in whose name the residence was owned or rented. Depending on how one wishes to define a household head, one could consider those with A16_PERSON=1 as likely candidates.

Respondents

Screener Respondent

The indicator variable SCRNR_RESP identifies the screener respondent. As an alternative, the record with RELSCRR = 0 also identifies the screener respondent.

Household Respondent (HHR)

The indicator variable HH_RESP identifies the originally selected Household Respondent. For the 35 callback households where the originally selected Household Respondent was not interviewed, the variable PROXYHH_RESP identifies the second selected household respondent. For data collected from the Household Respondent, the last two digits of SAMPLEID are “12” or “13”; likewise, the value of IWTYPE would be “2” or “3”. For cases where the proxy household respondent was not the Adult Respondent, the last two digits of SAMPLEID are “14”. Note that for them IWTYPE = 2 as they are only a household respondent.

In the pre-Katrina household roster, the record with C2AREL = 0 also identifies the HHR.

Adult Respondent (AR)

The indicator variable ADULT_RESP identifies the randomly selected Adult Respondent. Another way of identifying data collected from the Adult Respondent is through the last two digits of SAMPLEID which would be “11” or “13”, or through the value of IWTYPE which would be “1” or “3”.

In the pre-Katrina household roster, the record with REL_AR = 0 also identifies the AR.

Household and Adult Respondent (HHA)

Those who have HH_RESP = 1 and ADULT_RESP = 1 were originally selected as both the Household Respondent and the Adult Respondent. That last two digits of SAMPLEID are “13” for data collected from the HHA, and the value of IWTYPE = 3 for such cases. Note that in the callback cases, if the Adult Respondent was interviewed as the proxy household respondent, ADULT_RESP = 1 and PROXYHH_RESP = 1 for those cases and this is the only way to positively identify them: one cannot use SAMPLEID or IWTYPE values for these few cases.

Other Individuals (Not Respondents)

Below we discuss how to identify other types on individuals of interest.

Pre-Katrina Spouses/Partners of Respondents

In the HHROST_PUBFIN file, the variable C2AREL provides the relationship to household roster respondent for a given pre-Katrina household member and REL_AR shows the relationship to the Adult Respondent. When the Household Respondent completed the roster, the spouse/partner of the Household Respondent will have C2AREL= 1, 2, or 3, and the spouse/partner of the Adult Respondent (if not he/she is not also the HHR) will have REL_AR = 1, 2, or 3. If the Adult Respondent and Household Respondent are the same person, then only C2AREL needs to be consulted as it as REL_AR will be the same as C2AREL. The variable RELSCRR, relationship to screener respondent, can be used when the screener respondent was neither the HHR nor the AR.

To assist users, we have created a variable called SPOUSEID that has the ROST_ID value for the spouse/partner of a given individual when the spouse could be determined. See Chapter 6 for details.

Parents/Children of Respondents

Like spouses/partners above, C2AREL can be used to identify parents and children of the Household Respondent when the HHR completed the roster. REL_AR can be used to identify the parents and children of the Adult Respondent, and RELSCRR can be used to identify parents and children of the Screener Respondent. Parents have codes of “12” and “13”; parents-in-law have codes “14” and “15”; children have codes running from “4” to “9” that cover biological, adopted, and step children; children-in-law have codes “16” and “17”.

To assist users in identifying biological/adoptive parents, we have created two variables, MOMID and DADID, which contain the ROST_ID of the given individual’s mother and father, if present in the pre-Katrina household. See Chapter 6 for details.

Other Family Members of Respondents

C2AREL can be used to identify other family members of the Household Respondent, with the variables REL_AR and RELSCRR providing a similar function for the Adult Respondent and screener respondent respectively. Siblings will have codes of “10” and “11”; grandchildren have codes “18” and “19”; uncles/aunts have codes “24” and “25”; nieces/nephews have codes “22” and “23”; in-laws have codes “14”–“17” and “20” and “21”.

Household Members Listed After Screener

The initial list of pre-Katrina household members was drawn from the screener. If the Household Respondent did not complete the screener, the HR was asked if there was anyone else who lived at that address in August 2005 besides those listed by the Screener Respondent. There were instances where additional people were mentioned. These individuals have the variable AFTER_SCREENER = 1. They will have blanks for the screener-related variables PERSONNUM, AGE, AGE18, GENDER, and RELSCRR.

Household Members in Adult Respondent list and not in Household respondent list

When the Adult Respondent was interviewed, he/she was also asked if there was anyone else besides those listed in the screener who lived at the address in August 2005. There were cases where the Adult Respondent mentioned someone whom the Household Respondent did not. We added those individuals to the roster constructed from the Household Respondent interview. These individuals have the variable ARONLY_ROST = 1 and will have no data on them other than the C2PERSONNUM, C2AAGE, C2AAGE18, C2AGENDER, and C2AREL variables because the Adult-only respondent (i.e., the respondent was not also the HHR) was not asked the detailed questions about the individual pre-Katrina household members. Note that these individuals will also have AFTER_SCREENER = 1.

10. LINKING DNORS DATA FILES

This chapter covers strategies for linking information across and within DNORS data files. Much of the information on appropriate IDs to use for linkage in this chapter is summarized in Tables 7.1 and 7.2 in Chapter 7 and in Chapter 9.

Linking Household-Level Data

The variable HHID is the pre-Katrina household identifier and is used to link household-level data. Household-level data in DNORS can be generated from the household roster (HHROST_PUBFIN) by aggregating across household members (e.g., creating counts of different types of people). Household-level data was also collected in some sections of the individual interview data file (RESP_IW_PUBFIN) such as D (household losses) and M (household income). In households where there were two individual respondents, users will have to decide how to handle multiple reports for the same household. Information in the screener file (SCREENER_PUBFIN) includes one record per pre-Katrina household and can be linked to other data using HHID.

Linking Individual-Level Data

Linking Child Roster and Child Module data

In the RESP_IW_PUBFIN file, for a given HHID, the CC_CHPNUM_x variables are the ROST_ID values in the household roster (HHROST_PUBFIN) for the children selected for the Child Module who were pre-Katrina household members.

Linking Child Module and C35/C36 Children Ever Born/Adopted data

In the RESP_IW_FIN, the CC_CHNUM_x variable shows which children in the list of the respondent's children covered in questions C35 (for those with only one child under age 18 years [C33 = 1]) and C36 (for those with more than one child under age 18 years [C33 > 1]) were selected for the Child Module. The order of CC_CHNUM_x is the order in which the child was randomly selected if there were more than three such children. For example, if C33 = 5 and the third child in the C36 list was the first child selected for the Child Module, CC_CHNUM_1 = 3; if the first child in the C36 list was the second child selected, CC_CHNUM_2 = 1; if the fifth child was the third child selected, CC_CHNUM_3 = 5. When there were three children listed in C36 and all were under age 18 years, the first child listed in C36 (C35 if C33 = 1) will have CC_CHNUM_1 = 1, the second child listed in C36 will have CC_CHNUM_2 = 2, and the third child CC_CHNUM_3 = 3.

Linking Respondent Interview to Household Roster data

In RESP_IW_PUBFIN, the respondent's own data from the household roster file HHROST_PUBFIN has already been added so no linkage of this type needs to be done. As noted earlier, the HHID/ROST_ID combination would be used to link the individual respondent's roster data to his/her main interview data if that is needed.

Linking Katrina Spouses/Partners

For linking spouse/partner data to the HHR and AR respondent individual interview data (RESP_IW_PUBFIN), the variable SPOUSEID is on the HHROST_PUBFIN file and on the

RESP_IW_PUBFIN file. Users can merge the spouse/partner roster data to the RESP_IW_PUBFIN file using HHID and SPOUSEID.

For linking spouse/partner data within the pre-Katrina roster (HHROST_PUBFIN), merging can be done in several ways depending on the programming software used and the user's programming skills. For example, SQL procedures in SAS provide a simpler matching process than the alternative of renaming ROST_ID in one file to SPOUSEID (along with renaming variables to be added) and merging by HHID and SPOUSEID. Please refer to the manual for the software you are using for specifics on how to merge files.

Linking Parents and Children

For child-based analyses, a common task may be to link information about the parents to a child's record.

Parents to Children in the Child Module Data

Because the Child Module data is part of the RESP_IW_PUBFIN file, the linkage of the mother's data already exists. For Child Module children with fathers in the pre-Katrina household (CB1_x = 1), the CB1_DADID_x variables can be used to link in the information found in HHROST_PUBFIN for the father by matching them to ROST_ID for a given HHID. In cases where the father of a selected child in the Child Module might be the household respondent, one can use the CB1_DADID_x to compare to the ROST_ID for a given HHID in the RESP_IW_PUBFIN data.

Parents to Children in the Pre-Katrina Household Roster

The MOMID and DADID variables in the HHROST_PUBFIN file can be used to link parental data to children listed as members in a given pre-Katrina household defined by HHID. The linkage process is similar to that for adding spouse/partner data.

Linking Adult Respondent and Household Respondent Data

When the AR and HHR are not the same person, the user may wish to link the two sets of data together in some instances. In the RESP_IW_PUBFIN file, records with the same HHID are respondents from the same household, and the variables AR_ID and HH_ID have the ROST_ID values for the Adult and Household Respondents, respectively, for those in the same HHID.

APPENDIX A. DESCRIPTION OF IMPUTED INCOME AND LOSSES DATA FOR DNORS

This appendix describes the methods used to perform imputations for the Displaced New Orleans Residents Survey (DNORS) household income variables (M1 and M2) and property damage and losses variables (D17 and D18). The methodology is based on the RAND HRS imputation methodology for income and asset variables. We imputed continuous values for M1, M2, and D18, and we imputed a categorical response for D17.

DNORS sometimes conducted interviews with two adults from the same household. In two-respondent households in which one respondent provided a valid response and the other did not, we imputed the missing response by assigning the other household member's valid response. For the variable M1, household income in the year prior to the DNORS interview, we only used the other adult's response when both adults were living in the same household. In two-respondent households in which neither respondent provided a valid response, we performed separate imputations, because the two respondents in those cases sometimes provided quite different partial information (for example, different responses to bracket follow-up questions). We suggest that the researchers using these data carefully consider how to treat those cases.

The file "hh_income_and_loss-value_imputations.dta" contains the results of these imputations. The file contains the household identifier HHID, the individual identifier PERSONNUM (because separate imputations were sometimes done for the same household), the raw interview responses M1, M2, D17, or D18, the corresponding imputed variables (identified by the suffix _IMP), and corresponding imputation flags (identified by the suffix _IMPFLAG) that describe the type of imputation that was performed for each record.

Imputation Methodology

Our methodology for performing these imputations closely resembles the imputation methodology used to construct RAND Health and Retirement Study (HRS) extracts. We constructed the imputations in two stages. First, "bracket" responses (e.g., annual income less than $17,000; $17,000–$35,000; $35,000–$70,000, $70,000–$140,000, and more than $140,000) were imputed for records that did not provide a continuous response and failed to complete the bracket follow-up questions. Then continuous values were imputed for all records that failed to provide a continuous response.

Stage 1: During the DNORS interviews, respondents who refused or did not know the answer to questions about household income or the value of property losses were prompted to provide a bracket, or range, in which the value in question fell. In these cases, some respondents provided a valid bracket response and other did not. We began the imputation process by imputing a bracket response for respondents that did not provide a valid response to the bracket follow-up questions. To do this, we used the records of respondents who provided a valid bracket response to impute brackets for respondents who did not. We estimated the probability of a response falling in each of the possible brackets using an ordered logit model. The explanatory variables in this model were the principal components from a group of explanatory variables listed below. We included all principal components that had a corresponding eigenvalue above one as explanatory variables in the imputation models. We then stochastically imputed brackets, setting the probability of each bracket equal to the probability predicted by the estimated ordered logit.

We used this same categorical imputation procedure to impute responses to the categorical variable D17. We felt that this procedure was appropriate for imputing D17, because the responses to the question are themselves ordered (no damage, some damage, a moderate amount of damage, a lot of damage).

Stage 2: We next imputed continuous values using three different methods.

First we imputed continuous values for observations in closed brackets (e.g. $35,000–$70,000) using a matching procedure. To facilitate the matching procedure, we estimated a regression of the log of income/losses (among records with valid continuous responses) on the set of principal components, and we computed predicted values (both for the observations needing imputation and for the valid "donor" observations). We then imputed a continuous value for each observation from a closed bracket by assigning it the continuous value of the donor observation from the same bracket with the closest predicted value. The RAND HRS methodology uses alternative procedures when there are few donor observations in a bracket. Those procedures were not necessary for DNORS, because all of the brackets had a sufficient number of donors.

Next we stochastically imputed continuous values for observations in open brackets (e.g., more than $140,000) using a Tobit-based procedure. We estimated a Tobit model in which the dependent variable was the log of income/losses with the bottom 25 percent of values censored to the 25th percentile, and the explanatory variables were the same set of principal components. We then imputed a continuous value for each observation from an open bracket by assigning it the sum of the predicted value from the Tobit and a normally distributed random disturbance with a mean of zero and a standard deviation of σ (the Tobit's scale parameter). When this value fell outside of the open bracket to which the record belonged (e.g., if a prediction fell below $140,000 and the bracket was "over $140,000"), we repeatedly re-drew the random disturbance until the resulting prediction fell inside the appropriate bracket. We exponentiated the imputed log-values to obtain imputed levels.

Finally we stochastically imputed continuous values for records in which the respondent did not provide a continuous response but did indicate that the continuous income/losses value fell "near" a boundary point of one of the brackets. The bracket follow-up questions were of the form, "Was (that amount) more than $X, or less than $X, or what?", and the accepted answers include "MORE THAN $X," "LESS THAN $X," and "ABOUT $X". In cases in which the respondent indicated "about $X", we imputed continuous values using,

$$\text{imputed} = (\$X) * \exp[N(0,0.05)],$$

where N(0,0.05) is a draw from a normal distribution with a mean of zero and a standard deviation of 0.05. This procedure sets the continuous value to the bracket boundary $X plus a random disturbance that has a standard deviation of approximately 5% of $X.

Control Variables for Imputations

The control variables used to compute the principal components differed slightly for the four variables being imputed. Table A.1 lists the control variables that were included as explanatory variable in all of the imputation models. Table A.2 lists the variables that were added as additional explanatory variables when computing the principal components used to impute M2. Table A.3 lists variables that were added as additional explanatory variables when computing the principal components used to impute D17. Table A.4 lists the variables that were added as additional explanatory variables when computing the principal components used to impute D18.

Table A.1. Control Variables Included in all of the Imputation Models

Variable	Description
head_1male	Single-male-headed household dummy
head_1female	Single-female-headed household dummy
heads_married	Two married household heads dummy
oth_workage	Number of working-age household members besides household heads
oth_retired	Number of retirement-age household members besides household heads
interview_adult	DNORS adult interview dummy
interview_hh	DNORS household interview dummy
Rent	Renter dummy
hm_samehouse	Dummy indicating that male head resides in pre-Katrina home at the time the interview
hm_oth_nola	Dummy indicating that male head resides elsewhere in New Orleans
hf_samehouse	Dummy indicating that female head resides in pre-Katrina home at the time the interview
hf_oth_nola	Dummy indicating that female head resides elsewhere in New Orleans
kids0010	Number of children age 0-10
kids1117	Number of children age 11-17
hm_age_0019	Dummy indicator that the male head is under age 20
hm_age_2029	Dummy indicator that the male head is 20-29 years old
hm_age_3034	Dummy indicator that the male head is 30-34 years old
hm_age_3539	Dummy indicator that the male head is 35-39 years old
hm_age_4044	Dummy indicator that the male head is 40-44 years old
hm_age_4549	Dummy indicator that the male head is 45-49 years old
hm_age_5064	Dummy indicator that the male head is 50-64 years old
hm_age_ge65	Dummy indicator that the male head is 65 years old or more
hm_age_deceased	Dummy indicator that the male head is deceased
hm_health_low	Dummy indicator that the male head's health is fair or poor
hm_health_hi	Dummy indicator that the male head's health is excellent or very good
hm_working	Dummy indicator that the male head is working at the time of the interview
hm_unemp	Dummy indicator that the male head is unemployed at the time of the interview
hm_black	Dummy indicator that the male head is black
hm_hsdrop	Dummy indicator that the male head is a high school dropout
hm_somecoll	Dummy indicator that the male head attended college but has no bachelor's
hm_bach	Dummy indicator that the male head has a bachelor's
hf_age_0019	Dummy indicator that the female head is under age 20
hf_age_2029	Dummy indicator that the female head is 20-29 years old
hf_age_3034	Dummy indicator that the female head is 30-34 years old
hf_age_3539	Dummy indicator that the female head is 35-39 years old
hf_age_4044	Dummy indicator that the female head is 40-44 years old
hf_age_4549	Dummy indicator that the female head is 45-49 years old
hf_age_5064	Dummy indicator that the female head is 50-64 years old
hf_age_ge65	Dummy indicator that the female head is 65 years old or more
hf_age_deceased	Dummy indicator that the female head is deceased
hf_health_low	Dummy indicator that the female head's health is fair or poor
hf_health_hi	Dummy indicator that the female head's health is excellent or very good
hf_working	Dummy indicator that the female head is working at the time of the interview
hf_unemp	Dummy indicator that the female head is unemployed at the time of the interview
hf_black	Dummy indicator that the female head is black
hf_hsdrop	Dummy indicator that the female head is a high school dropout
hf_somecoll	Dummy indicator that the female head attended college but has no bachelor's
hf_bach	Dummy indicator that the female head has a bachelor's
hm_age_miss	Dummy indicator that the male head's age is missing
hm_racemiss	Dummy indicator that the male head's race is missing
hm_educmiss	Dummy indicator that the male head's education is missing
hm_health_miss	Dummy indicator that the male head's health status is missing
hf_age_miss	Dummy indicator that the female head's age is missing
hf_racemiss	Dummy indicator that the female head's race is missing
hf_educmiss	Dummy indicator that the female head's education is missing
hf_health_miss	Dummy indicator that the female head's health is missing

Table A.2. Additional Explanatory Variables for M2 Imputation Models

Variable	Description
lnm1_fill	Log of pre-Katrina annual household income (=0 for zero or missing income)
m1_zero	Dummy indicator for zero pre-Katrina annual household income
m1_miss	Dummy indicator for missing pre-Katrina annual household income
DUMm1_bracket_fill*	Dummies for pre-Katrina income categories (if no continuous response provided)

Table A.3. Additional Explanatory Variables for D17 Imputation Models

Variable	Description
flood02	Dummy for 0-2 feet of flooding at household's pre-Katrina residence
flood24	Dummy for 2-4 feet of flooding at household's pre-Katrina residence
floodgt4	Dummy for > 4 feet of flooding at household's pre-Katrina residence
flood_nocode	Dummy for missing geocode (so no flood depth measure)
rnt_flood02	Renter indicator times Dummy for 0-2 feet of flooding at household's pre-Katrina residence
rnt_flood24	Renter indicator times Dummy for 2-4 feet of flooding at household's pre-Katrina residence
rnt_floodgt4	Renter indicator times Dummy for > 4 feet of flooding at household's pre-Katrina residence
rnt_flood_nocode	Renter indicator times Dummy for missing geocode (so no flood depth measure)

Table A.4. Additional Explanatory Variables for D18 Imputation Models

Variable	Description
dmg_some	Dummy for "some" Katrina-related damage to property and possessions
dmg_moderate	Dummy for "moderate" Katrina-related damage to property and possessions
dmg_alot	Dummy for "a lot" of Katrina-related damage to property and possessions
dmg_miss	Dummy for a missing Katrina-related damage category
flood02	Dummy for 0-2 feet of flooding at household's pre-Katrina residence
flood24	Dummy for 2-4 feet of flooding at household's pre-Katrina residence
floodgt4	Dummy for > 4 feet of flooding at household's pre-Katrina residence
flood_nocode	Renter indicator times dummy for missing geocode (so no flood depth measure)
rnt_dmg_some	Renter indicator times dummy for "some" Katrina-related damage to property and possessions
rnt_dmg_moderate	Renter indicator times dummy for "moderate" Katrina-related damage to property and possessions
rnt_dmg_alot	Renter indicator times dummy for "a lot" of Katrina-related damage to property and possessions
rnt_dmg_miss	Renter indicator times dummy for a missing Katrina-related damage category
rnt_flood02	Renter indicator times dummy for 0-2 feet of flooding at household's pre-Katrina residence
rnt_flood24	Renter indicator times dummy for 2-4 feet of flooding at household's pre-Katrina residence
rnt_floodgt4	Renter indicator times dummy for > 4 feet of flooding at household's pre-Katrina residence
rnt_flood_nocode	Renter indicator times dummy for missing geocode (so no flood depth measure)

Income and Losses Imputation Results

Overall, approximately three-quarters or more of DNORS respondents provided numeric values in response to questions about income and the monetary value of losses due to Hurricane

Katrina (see Table A.5). Between 9% and 16% of respondents provided bracketed values, and the remaining 8% to 11% of respondents either did not know or refused to respond to these questions.

Table A.5. Imputed, Bracketed, and Missing Values for DNORS Household Income and Losses Data

	M1: current HH income		M2: 2005 HH income		D18: value of damages	
	Percent	Count	Percent	Count	Percent	Count
Not imputed	74.4	1,027	75.0	1,035	83.9	1,158
Imputed from brackets	15.7	217	14.1	194	8.5	117
Imputed for DK/Ref	9.9	136	10.9	151	7.6	105
Total	100.0	1,380	100.0	1,380	100.0	1,380

Finally, in Table A.6 we present the results of the imputations. The table shows the median values for current household income, household income in 2005, and damage losses due to Katrina, both with and without the imputed values and both with and without using the sample weights. For M2, the 2005 household income, we also present the median household income from the 2005 ACS for New Orleans. Comparing the DNORS imputed values with the ACS-2005 estimates shows the two values are similar.

Table A.6. Median Values for DNORS Household Income and Losses

	M1: current HH income		M2: 2005 HH income		D18: value of damages	
Variable	Unweighted	Weighted	Unweighted	Weighted	Unweighted	Weighted
No imputed values	$38,000	$30,000	$40,000	$32,000	$66,00061,500	$40,000
With imputed values	$32,000	$27,000	$35,000	$29,000	$60,00053,320	$30,000
ACS-2005 (MOE)				$30,711 (+/- $1,780)		

APPENDIX B. OCCUPATION AND INDUSTRY CODES

This appendix lists the occupation and industry codes used for DNORS, which are based the U.S. Census Bureau's coding scheme used in the 2000 Decennial Census.

Occupation Codes

MGR Management Occupations
001 Chief Executives
002 General and Operations Managers
003 Legislators
004 Advertising and Promotions Managers
005 Marketing and Sales Managers
006 Public Relations Managers
010 Administrative Services Managers
011 Computer and Information Systems Managers
012 Financial Managers
013 Human Resources Managers
014 Industrial Production Managers
015 Purchasing Managers
016 Transportation, Storage, and Distribution Managers
020 Farm, Ranch, and Other Agricultural Managers
021 Farmers and Ranchers
022 Constructions Managers
023 Education Administrators
030 Engineering Managers
031 Food Service Managers
032 Funeral Directors
033 Gaming Managers
034 Lodging Managers
035 Medical and Health Services Managers
036 Natural Science Managers
040 Postmasters and Mail Superintendents
041 Property, Real Estate, and Community Association Managers
042 Social and Community Service Managers
043 Managers, All Other

BUS Business Operations Specialists
050 Agents and Business Managers of Artists, Performers, and Athletes
051 Purchasing Agents and Buyers, Farm Products
052 Wholesale and Retail Buyers, Except Farm Products
053 Purchasing Agents, Except Wholesale, Retail, and Farm Products
054 Claims Adjusters, Appraisers, Examiners, and Investigators
056 Compliance Officers, Except Agriculture, Construction, Health and Safety, and Transportation
060 Cost Estimators
062 Human Resources, Training, and Labor Relations Specialists
070 Logisticians
071 Management Analysts
072 Meeting and Convention Planners
073 Other Business Operations Specialists

FIN Financial Specialists
080 Accountants and Auditors
081 Appraisers and Assessors of Real Estate
082 Budget Analysts
083 Credit Analysts
084 Financial Analysts
085 Personal Financial Advisors
086 Insurance Underwriters
090 Financial Examiners
091 Loan Counselors and Officers
093 Tax Examiners, Collectors, and Revenue Agents
094 Tax Preparers
095 Financial Specialists, All Other

CMM Computer and Mathematical Occupations
100 Computer Scientists and Systems Analysts
101 Computer Programmers
102 Computer Software Engineers
104 Computer Support Specialists
106 Database Administrators
110 Network and Computer Systems Administrators
111 Network Systems and Data Communications Analysts
120 Actuaries
121 Mathematicians
122 Operations Research Analysts
123 Statisticians
124 Miscellaneous Mathematical Scientists and Technicians

ENG Architecture and Engineering Occupations
130 Architects, Except Naval
131 Surveyors, Cartographers, and Photogrammetrists
132 Aerospace Engineers
133 Agricultural Engineers
134 Biomedical Engineers
135 Chemical Engineers
136 Civil Engineers
140 Computer Hardware Engineers
141 Electrical and Electronics Engineers
142 Environmental Engineers
143 Industrial Engineers, including Health and Safety
144 Marine Engineers and Naval Architects
145 Materials Engineers
146 Mechanical Engineers
150 Mining and Geological Engineers, Including Mining Safety Engineers
151 Nuclear Engineers
152 Petroleum Engineers
153 Engineers, All Other
154 Drafters
155 Engineering Technicians, Except Drafters
156 Surveying and Mapping Technicians

SCI Life, Physical, and Social Science Occupations
160 Agricultural and Food Scientists
161 Biological Scientists
164 Conservation Scientists and Foresters
165 Medical Scientists
170 Astronomers and Physicists
171 Atmospheric and Space Scientists
172 Chemists and Materials Scientists
174 Environmental Scientists and Geoscientists
176 Physical Scientists, All Other
180 Economists
181 Market and Survey Researchers
182 Psychologists
183 Sociologists
184 Urban and Regional Planners
186 Miscellaneous Social Scientists and Related Workers
190 Agricultural and Food Science Technicians
191 Biological Technicians
192 Chemical Technicians
193 Geological and Petroleum Technicians
194 Nuclear Technicians
196 Other Life, Physical, and Social Science Technicians

CMS Community and Social Services Occupations
200 Counselors
201 Social Workers
202 Miscellaneous Community and Social Service Specialists
204 Clergy
205 Directors, Religious Activities and Education
206 Religious Workers, All Other

LGL Legal Occupations
210 Lawyers
211 Judges, Magistrates, and Other Judicial Workers
214 Paralegals and Legal Assistants
215 Miscellaneous Legal Support Workers

EDU Education, Training, and Library Occupations
220 Postsecondary Teachers
230 Preschool and Kindergarten Teachers
231 Elementary and Middle School Teachers
232 Secondary School Teachers
233 Special Education Teachers
234 Other Teachers and Instructors
240 Archivists, Curators, and Museum Technicians
243 Librarians
244 Library Technicians
254 Teacher Assistants
255 Other Education, Training, and Library Workers

ENT Arts, Design, Entertainment, Sports, and Media Occupations

260 Artists and Related Workers
263 Designers
270 Actors
271 Producers and Directors
272 Athletes, Coaches, Umpires, and Related Workers
274 Dancers and Choreographers
275 Musicians, Singers, and Related Workers
276 Entertainers and Performers, Sports and Related Workers, All Other
280 Announcers
281 News Analysts, Reporters and Correspondents
282 Public Relations Specialists
283 Editors
284 Technical Writers
285 Writers and Authors
286 Miscellaneous Media and Communication Workers
290 Broadcast and Sound Engineering Technicians and Radio Operators
291 Photographers
292 Television, Video, and Motion Picture Camera Operators and Editors
296 Media and Communication Equipment Workers, All Other

MED Healthcare Practitioners and Technical Occupations

300 Chiropractors
301 Dentists
303 Dietitians and Nutritionists
304 Optometrists
305 Pharmacists
306 Physicians and Surgeons
311 Physician Assistants
312 Podiatrists
313 Registered Nurses
314 Audiologists
315 Occupational Therapists
316 Physical Therapists
320 Radiation Therapists
321 Recreational Therapists
322 Respiratory Therapists
323 Speech-Language Pathologists
324 Therapists, All Other
325 Veterinarians
326 Health Diagnosing and Treating Practitioners, All Other
330 Clinical Laboratory Technologists and Technicians
331 Dental Hygienists
332 Diagnostic Related Technologists and Technicians
340 Emergency Medical Technicians and Paramedics
341 Health Diagnosing and Treating Practitioner Support Technicians
350 Licensed Practical and Licensed Vocational Nurses
351 Medical Records and Health Information Technicians
352 Opticians, Dispensing
353 Miscellaneous Health Technologists and Technicians
354 Other Healthcare Practitioners and Technical Occupations

HLS Healthcare Support Occupations
360 Nursing, Psychiatric, and Home Health Aides
361 Occupational Therapist Assistants and Aides
362 Physical Therapist Assistants and Aides
363 Massage Therapists
364 Dental Assistants
365 Medical Assistants and Other Healthcare Support Occupations

PRT Protective Service Occupations
370 First-Line Supervisors/Managers of Correctional Officers
371 First-Line Supervisors/Managers of Police and Detectives
372 First-Line Supervisors/Managers of Fire Fighting and Prevention Workers
373 Supervisors, Protective Service Workers, All Other
374 Fire Fighters
375 Fire Inspectors
380 Bailiffs, Correctional Officers, and Jailers
382 Detectives and Criminal Investigators
383 Fish and Game Wardens
384 Parking Enforcement Workers
385 Police and Sheriff's Patrol Officers
386 Transit and Railroad Police
390 Animal Control Workers
391 Private Detectives and Investigators
392 Security Guards and Gaming Surveillance Officers
394 Crossing Guards
395 Lifeguards and Other Protective Service Workers

EAT Food Preparation and Serving Occupations
400 Chefs and Head Cooks
401 First-Line Supervisors/Managers of Food Preparation and Serving Workers
402 Cooks
403 Food Preparation Workers
404 Bartenders
405 Combined Food Preparation and Serving Workers, Including Fast Food
406 Counter Attendant, Cafeteria, Food Concession, and Coffee Shop
411 Waiters and Waitresses
412 Food Servers, Nonrestaurant
413 Dining Room and Cafeteria Attendants and Bartender Helpers
414 Dishwashers
415 Host and Hostesses, Restaurant, Lounge, and Coffee Shop
416 Food Preparation and Serving Related Workers, All Other

CLN Building and Grounds Cleaning and Maintenance Occupations
420 First-Line Supervisors/Managers of Housekeeping and Janitorial Workers
421 First-Line Supervisors/Managers of Landscaping, Lawn Service, and Groundskeeping Workers
422 Janitors and Building Cleaners
423 Maids and Housekeeping Cleaners
424 Pest Control Workers
425 Grounds Maintenance Workers

PRS Personal Care and Service Occupations
430 First-Line Supervisors/Managers of Gaming Workers
432 First-Line Supervisors/Managers of Personal Service Workers
434 Animal Trainers
435 Nonfarm Animal Caretakers
440 Gaming Services Workers
441 Motion Picture Projectionists
442 Ushers, Lobby Attendants, and Ticket Takers
443 Miscellaneous Entertainment Attendants and Related Workers
446 Funeral Service Workers
450 Barbers
451 Hairdressers, Hairstylists, and Cosmetologists
452 Miscellaneous Personal Appearance Workers
453 Baggage Porters, Bellhops, and Concierges
454 Tour and Travel Guides
455 Transportation Attendants
460 Child Care Workers
461 Personal and Home Care Aides
462 Recreation and Fitness Workers
464 Residential Advisors
465 Personal Care and Service Workers, All Other

SAL Sales Occupations
470 First-Line Supervisors/Managers of Retail Sales Workers
471 First-Line Supervisors/Managers of Non-Retail Sales
472 Cashiers
474 Counter and Rental Clerks
475 Parts Salespersons
476 Retail Salespersons
480 Advertising Sales Agents
481 Insurance Sales Agents
482 Securities, Commodities, and Financial Services Sales Agents
483 Travel Agents
484 Sales Representatives, Services, All Other
485 Sales Representatives, Wholesale and Manufacturing
490 Models, Demonstrators, and Product Promoters
492 Real Estate Brokers and Sales Agents
493 Sales Engineers
494 Telemarketers
495 Door-to-Door Sales Workers, News and Street Vendors, and Related Workers
496 Sales and Related Workers, All Other

OFF Office and Administrative Support Occupations
500 First-Line Supervisors/Managers of Office and Administrative Support Workers
501 Switchboard Operators, Including Answering Service
502 Telephone Operators
503 Communications Equipment Operators, All Other
510 Bill and Account Collectors
511 Billing and Posting Clerks and Machine Operators
512 Bookkeeping, Accounting, and Auditing Clerks
513 Gaming Cage Workers

514 Payroll and Timekeeping Clerks
515 Procurement Clerks
516 Tellers
520 Brokerage Clerks
521 Correspondence Clerks
522 Court, Municipal, and License Clerks
523 Credit Authorizers, Checkers, and Clerks
524 Customer Service Representatives
525 Eligibility Interviewers, Government Programs
526 File Clerks
530 Hotel, Motel, and Resort Desk Clerks
531 Interviewers, Except Eligibility and Loan
532 Library Assistants, Clerical
533 Loan Interviewers and Clerks
534 New Account Clerks
535 Order Clerks
536 Human Resources Assistants, Except Payroll and Timekeeping
540 Receptionists and Information Clerks
541 Reservation and Transportation Ticket Agents and Travel Clerks
542 Information and Record Clerks, All Other
550 Cargo and Freight Agents
551 Couriers and Messengers
552 Dispatchers
553 Meter Readers, Utilities
554 Postal Service Clerks
555 Postal Service Mail Carriers
556 Postal Service Mail Sorters, Processors, and Processing Machine Operators
560 Production, Planning, and Expediting Clerks
561 Shipping, Receiving, and Traffic Clerks
562 Stock Clerks and Order Fillers
563 Weighers, Measurers, Checkers, and Samplers, Recordkeeping
570 Secretaries and Administrative Assistants
580 Computer Operators
581 Data Entry Keyers
582 Word Processors and Typists
583 Desktop Publishers
584 Insurance Claims and Policy Processing Clerks
585 Mail Clerks and Mail Machine Operators, Except Postal Service
586 Office Clerks, General
590 Office Machine Operators, Except Computer
591 Proofreaders and Copy Markers
592 Statistical Assistants
593 Office and Administrative Support Workers, All Other

FFF Farming, Fishing, and Forestry Occupations
600 First-Line Supervisors/Managers/Contractors of Farming, Fishing, and Forestry Workers
601 Agricultural Inspectors
602 Animal Breeders
604 Graders and Sorters, Agricultural Products
605 Other Agricultural Workers
610 Fishers and Related Fishing Workers

611 Hunters and Trappers
612 Forest and Conservation Workers
613 Logging Workers

CON Construction Trades
620 First-Line Supervisors/Managers of Construction Trades and Extraction Workers
621 Boilermakers
622 Brickmasons, Blockmasons, and Stonemasons
623 Carpenters
624 Carpet, Floor, and Tile Installers and Finishers
625 Cement Masons, Concrete Finishers, and Terrazzo Workers
626 Construction Laborers
630 Paving, Surfacing, and Tamping Equipment Operators
631 Pile-Driver Operators
632 Operating Engineers and Other Construction Equipment Operators
633 Drywall Installers, Ceiling Tile Installers, and Tapers
635 Electricians
636 Glaziers
640 Insulation Workers
642 Painters, Construction and Maintenance
643 Paperhangers
644 Pipelayers, Plumbers, Pipefitters, and Steamfitters
646 Plasterers and Stucco Masons
650 Reinforcing Iron and Rebar Workers
651 Roofers
652 Sheet Metal Workers
653 Structural Iron and Steel Workers
660 Helpers, Construction Trades
666 Construction and Building Inspectors
670 Elevator Installers and Repairers
671 Fence Erectors
672 Hazardous Materials Removal Workers
673 Highway Maintenance Workers
674 Rail-Track Laying and Maintenance Equipment Operators
675 Septic Tank Servicers and Sewer Pipe Cleaners
676 Miscellaneous Construction and Related Workers

EXT Extraction Workers
680 Derrick, Rotary Drill, and Service Unit Operators, Oil, Gas, and Mining
682 Earth Drillers, Except Oil and Gar
683 Explosives Workers, Ordnance Handling Experts, and Blasters
684 Mining Machine Operators
691 Roof Bolters, Mining
692 Roustabouts, Oil and Gas
693 Helpers--Extraction Workers
694 Other Extraction Workers

RPR Installation, Maintenance, and Repair Workers
700 First-Line Supervisors/Managers of Mechanics, Installers, and Repairers
701 Computer, Automated Teller, and Office Machine Repairers
702 Radio and Telecommunications Equipment Installers and Repairers

703 Avionics Technicians
704 Electric Motor, Power Tool, and Related Repairers
705 Electrical and Electronics Installers and Repairers, Transportation Equipment
710 Electrical and Electronics Repairers, Industrial and Utility
711 Electronic Equipment Installers and Repairers, Motor Vehicles
712 Electronic Home Entertainment Equipment Installers and Repairers
713 Security and Fire Alarm Systems Installers
714 Aircraft Mechanics and Service Technicians
715 Automotive Body and Related Repairers
716 Automotive Glass Installers and Repairers
720 Automotive Service Technicians and Mechanics
721 Bus and Truck Mechanics and Diesel Engine Specialists
722 Heavy Vehicle and Mobile Equipment Service Technicians and Mechanics
724 Small Engine Mechanics
726 Miscellaneous Vehicle and Mobile Equipment Mechanics, Installers, and Repairers
730 Control and Valve Installers and Repairers
731 Heating, Air Conditioning, and Refrigeration Mechanics and Installers
732 Home Appliance Repairers
733 Industrial and Refractory Machinery Mechanics
734 Maintenance and Repair Workers, General
735 Maintenance Workers, Machinery
736 Millwrights
741 Electrical Power-Line Installers and Repairers
742 Telecommunications Line Installers and Repairers
743 Precision Instrument and Equipment Repairers
751 Coin, Vending, and Amusement Machine Servicers and Repairers
752 Commercial Divers
754 Locksmiths and Safe Repairers
755 Manufactured Building and Mobile Home Installers
756 Riggers
760 Signal and Track Switch Repairers
761 Helpers--Installation, Maintenance, and Repair Workers
762 Other Installation, Maintenance, and Repair Workers

PRD Production Occupations
770 First-Line Supervisors/Managers of Production and Operating Workers
771 Aircraft Structure, Surfaces, Rigging, and Systems Assemblers
772 Electrical, Electronics, and Electromechanical Assemblers
773 Engine and Other Machine Assemblers
774 Structural Metal Fabricators and Fitters
775 Miscellaneous Assemblers and Fabricators
780 Bakers
781 Butchers and Other Meat, Poultry, and Fish Processing Workers
783 Food and Tobacco Roasting, Baking, and Drying Machine Operators and Tenders
784 Food Batchmakers
785 Food Cooking Machine Operators and Tenders
790 Computer Control Programmers and Operators
792 Extruding and Drawing Machine Setters, Operators, and Tenders, Metal and Plastic
793 Forging Machine Setters, Operators, and Tenders, Metal and Plastic
794 Rolling Machine Setters, Operators, and Tenders, metal and Plastic

795 Cutting, Punching, and Press Machine Setters, Operators, and Tenders, Metal and Plastic
796 Drilling and Boring Machine Tool Setters, Operators, and Tenders, Metal and Plastic
800 Grinding, Lapping, Polishing, and Buffing Machine Tool Setters, Operators, and Tenders, Metal and Plastic
801 Lathe and Turning Machine Tool Setters, Operators, and Tenders, Metal and Plastic
802 Milling and Planing Machine Setters, Operators, and Tenders, Metal and Plastic
803 Machinists
804 Metal Furnace and Kiln Operators and Tenders
806 Model Makers and Patternmakers, Metal and Plastic
810 Molders and Molding Machine Setters, Operators, and Tenders, Metal and Plastic
812 Multiple Machine Tool Setters, Operators, and Tenders, Metal and Plastic
813 Tool and Die Makers
814 Welding, Soldering, and Brazing Workers
815 Heat Treating Equipment Setters, Operators, and Tenders, Metal and Plastic
816 Lay-Out Workers, Metal and Plastic
820 Plating and Coating Machine Setters, Operators, and Tenders, Metal and Plastic
821 Tool Grinders, Filers, and Sharpeners
822 Metalworkers and Plastic Workers, All Other
823 Bookbinders and Bindery Workers
824 Job Printers
825 Prepress Technicians and Workers
826 Printing Machine Operators
830 Laundry and Dry-Cleaning Workers
831 Pressers, Textile, Garment, and Related Materials
832 Sewing Machine Operators
833 Shoe and Leather Workers and Repairers
834 Shoe Machine Operators and Tenders
835 Tailors, Dressmakers, and Sewers
836 Textile Bleaching and Dyeing Machine Operators and Tenders
840 Textile Cutting Machine Setters, Operators, and Tenders
841 Textile Knitting and Weaving Machine Setters, Operators, and Tenders
842 Textile Winding, Twisting, and Drawing Out Machine Setters, Operators, and Tenders
843 Extruding and Forming Machine Setters, Operators, and Tenders, Synthetic and Glass Fibers
844 Fabric and Apparel Patternmakers
845 Upholsterers
846 Textile, Apparel, and Furnishings Workers, All Other
850 Cabinetmakers and Bench Carpenters
851 Furniture Finishers
852 Model Makers and Patternmakers, Wood
853 Sawing Machine Setters, Operators, and Tenders, Wood
854 Woodworking Machine Setters, Operators, and Tenders, Except Sawing
855 Woodworkers, All Other
860 Power Plant Operators, Distributors, and Dispatchers
861 Stationary Engineers and Boiler Operators
862 Water and Liquid Waste Treatment Plant and System Operators
863 Miscellaneous Plant and System Operators
864 Chemical Processing Machine Setters, Operators, and Tenders
865 Crushing, Grinding, Polishing, Mixing, and Blending Workers
871 Cutting Workers

872 Extruding, Forming, Pressing, and Compacting Machine Setters, Operators, and Tenders
873 Furnace, Kiln, Oven, Drier, and Kettle Operators and Tenders
874 Inspectors, Testers, Sorters, Samplers, and Weighers
875 Jewelers and Precious Stone and Metal Workers
876 Medical, Dental, and Ophthalmic Laboratory Technicians
880 Packaging and Filling Machine Operators and Tenders
881 Painting Workers
883 Photographic Process Workers and Processing Machine Operators
884 Semiconductor Processors
885 Cementing and Gluing Machine Operators and Tenders
886 Cleaning, Washing, and Metal Pickling Equipment Operators and Tenders
890 Cooling and Freezing Equipment Operators and Tenders
891 Etchers and Engravers
892 Molders, Shapers, and Casters, Except Metal and Plastic
893 Paper Goods Machine Setters, Operators, and Tenders
894 Tire Builders
895 Helpers--Production Workers
896 Production Workers, All Other

TRN Transportation and Material Moving Occupations
900 Supervisors, Transportation and Material Moving Workers
903 Aircraft Pilots and Flight Engineers
904 Air Traffic Controllers and Airfield Operations Specialists
911 Ambulance Drivers and Attendants, Except Emergency Medical Technicians
912 Bus Drivers
913 Driver/Sales Workers and Truck Drivers
914 Taxi Drivers and Chauffeurs
915 Motor Vehicle Operators, All Other
920 Locomotive Engineers and Operators
923 Railroad Brake, Signal, and Switch Operators
924 Railroad Conductors and Yardmasters
926 Subway, Streetcar, and Other Rail Transportation Workers
930 Sailors and Marine Oilers
931 Ship and Boat Captains and Operators
933 Ship Engineers
934 Bridge and Lock Tenders
935 Parking Lot Attendants
936 Service Station Attendants
941 Transportation Inspectors
942 Other Transportation Workers
950 Conveyor Operators and Tenders
951 Crane and Tower Operators
952 Dredge, Excavating, and Loading Machine Operators
956 Hoist and Winch Operators
960 Industrial Truck and Tractor Operators
961 Cleaners of Vehicles and Equipment
962 Laborers and Freight, Stock, and Material Movers, Hand
963 Machine Feeders and Off bearers
964 Packers and Packagers, Hand
965 Pumping Station Operators

972 Refuse and Recyclable Material Collectors
973 Shuttle Car Operators
974 Tank Car, Truck, and Ship Loaders
975 Material Moving Workers, All Other

MIL Military Specific Occupations
980 Military Officer Special and Tactical Operations Leaders/Managers
981 First-Line Enlisted Military Supervisors/Managers
982 Military Enlisted Tactical Operations and Air/Weapons Specialists and Crew Members
983 Military, Rank Not Specified (Census only)

999 Don't know

Industry Codes

017–029 | Agriculture, Forestry, Fishing, and Hunting
017 Crop production
018 Animal production
019 Forestry except logging
027 Logging
028 Fishing, hunting, and trapping
029 Support activities for agriculture and forestry

037–049 | Mining
037 Oil and gas extraction
038 Coal mining
039 Metal ore mining
047 Nonmetallic mineral mining and quarrying
048 Not specified type of mining
049 Support activities for mining

057–069 | Utilities
057 Electric power generation transmission and distribution
058 Natural gas distribution
059 Electric and gas and other combinations
067 Water, steam, air-conditioning, and irrigation systems
068 Sewage treatment facilities
069 Not specified utilities

077 | Construction
077 Construction

107–399 | Manufacturing
107 Animal food, grain, and oilseed milling
108 Sugar and confectionery products
109 Fruit and vegetable preserving and specialty food Manufacturing
117 Dairy product manufacturing
118 Animal slaughtering and processing
119 Retail bakeries
127 Bakeries except retail
128 Seafood and other miscellaneous foods n.e.c.

129 Not specified food industries
137 Beverage manufacturing
139 Tobacco manufacturing
147 Fiber, yarn, and thread mills
148 Fabric mills, except knitting
149 Textile and fabric finishing and coating mills
157 Carpets and rugs manufacturing
159 Textile product mills except carpets and rugs
167 Knitting mills
168 Cut and sew apparel manufacturing
169 Apparel accessories and other apparel manufacturing
177 Footwear manufacturing
179 Leather tanning and products, except footwear manufacturing
187 Pulp, paper, and paperboard mills
188 Paperboard containers and boxes
189 Miscellaneous paper and pulp products
199 Printing and related support activities
207 Petroleum refining
209 Miscellaneous petroleum and coal products
217 Resin, synthetic rubber and fibers, and filaments manufacturing
218 Agricultural chemical manufacturing
219 Pharmaceutical and medicine manufacturing
227 Paint, coating, and adhesives manufacturing
228 Soap, cleaning compound, and cosmetic manufacturing
229 Industrial and miscellaneous chemicals
237 Plastics product manufacturing
238 Tire manufacturing
239 Rubber products, except tires, manufacturing
247 Pottery, ceramics, and related products manufacturing
248 Structural clay product manufacturing
249 Glass and glass product manufacturing
257 Cement, concrete, lime, and gypsum product manufacturing
259 Miscellaneous nonmetallic mineral product manufacturing
267 Iron and steel mills and steel product manufacturing
268 Aluminum production and processing
269 Nonferrous metal, except aluminum, production and processing
277 Foundries
278 Metal forgings and stampings
279 Cutlery and hand tool manufacturing
287 Structural metals and tank and shipping container manufacturing
288 Machine shops; turned product; screw nut and bolt manufacturing
289 Coating, engraving, heat treating and allied activities
297 Ordnance
298 Miscellaneous fabricated metal products manufacturing
299 Not specified metal industries
307 Agricultural implement manufacturing
308 Construction mining and oil field machinery manufacturing
309 Commercial and service industry machinery manufacturing
317 Metalworking machinery manufacturing
318 Engines, turbines, and power transmission equipment manufacturing
319 Machinery manufacturing, n.e.c.

329 Not specified machinery manufacturing
336 Computer and peripheral equipment manufacturing
337 Communications, audio, and video equipment manufacturing
338 Navigation, measuring, electrometrical, and control instruments manufacturing
339 Electronic component and product manufacturing, n.e.c.
347 Household appliance manufacturing
349 Electrical machinery, equipment, and supplies manufacturing, n.e.c.
357 Motor vehicles and motor vehicle equipment manufacturing
358 Aircraft and parts manufacturing
359 Aerospace product and parts manufacturing
367 Railroad rolling stock manufacturing
368 Ship and boat building
369 Other transportation equipment manufacturing
377 Sawmills and wood preservation
378 Veneer, plywood, and engineered wood product manufacturing
379 Prefabricated wood buildings and mobile homes manufacturing
387 Miscellaneous wood product manufacturing
389 Furniture and fixtures
396 Medical equipment and supplies manufacturing
397 Toys, amusement, and sporting goods manufacturing
398 Miscellaneous manufacturing, n.e.c.
399 Not specified manufacturing industries

407–459 | Wholesale Trade
407 Motor vehicles, parts and supplies wholesalers
408 Furniture and home furnishing wholesalers
409 Lumber and other construction materials wholesalers
417 Professional and commercial equipment and supplies Wholesalers
418 Metals and minerals, except petroleum, wholesalers
419 Electrical goods wholesalers
426 Hardware, plumbing and heating equipment, and supplies wholesalers
427 Machinery, equipment, and supplies wholesalers
428 Recyclable material wholesalers
429 Miscellaneous durable goods wholesalers
437 Paper and paper product wholesalers
438 Drugs, sundries, and chemical and allied product Wholesalers
439 Apparel, fabrics, and notions wholesalers
447 Groceries and related product wholesalers
448 Farm product raw material wholesalers
449 Petroleum and petroleum product wholesalers
456 Alcoholic beverage wholesalers
457 Farm supplies wholesalers
458 Miscellaneous nondurable goods wholesalers
459 Not specified wholesale trade

467–579 | Retail Trade
467 Automobile dealers
468 Other motor vehicle dealers
469 Auto parts, accessories, and tire stores
477 Furniture and home furnishings stores
478 Household appliance stores

479 Radio, TV, and computer stores
487 Building material and supplies dealers
488 Hardware stores
489 Lawn and garden equipment and supplies stores
497 Grocery stores
498 Specialty food stores
499 Beer, wine, and liquor stores
507 Pharmacies and drug stores
508 Health and personal care, except drug, stores
509 Gasoline stations
517 Clothing and accessories, except shoe, stores
518 Shoe stores
519 Jewelry, luggage, and leather goods stores
527 Sporting goods, camera, and hobby and toy stores
528 Sewing, needlework and piece goods stores
529 Music stores
537 Book stores and news dealers
538 Department stores
539 Miscellaneous general merchandise stores
547 Retail florists
548 Office supplies and stationary stores
549 Used merchandise stores
557 Gift, novelty, and souvenir shops
558 Miscellaneous retail stores
559 Electronic shopping and mail-order houses
567 Vending machine operators
568 Fuel dealers
569 Other direct selling establishments
579 Not specified retail trade

607–639 | Transportation and Warehousing
607 Air transportation
608 Rail transportation
609 Water transportation
617 Truck transportation
618 Bus service and urban transit
619 Taxi and limousine service
627 Pipeline transportation
628 Scenic and sightseeing transportation
629 Services incidental to transportation
637 Postal Service
638 Courier and messengers
639 Warehousing and storage

647–679 | Information
647 Newspaper publishers
648 Publishing except newspapers and software
649 Software publishing
657 Motion pictures and video industries
659 Sound recording industries
667 Radio and television broadcasting and cable

668 Wired telecommunications carriers
669 Other telecommunication services
677 Libraries and archives
678 Other information services
679 Data processing services

687–699 | Finance and Insurance
687 Banking and related activities
688 Savings institutions, including credit unions
689 Non-depository credit and related activities
697 Securities, commodities, funds, trusts, and other financial investments
698 Insurance carriers and related activities

707–719 | Real Estate and Rental and Leasing
707 Real estate
708 Automotive equipment rental and leasing
717 Video tape and disk rental
718 Other consumer goods rental
719 Commercial, industrial, and other intangible assets rental and leasing

727–749 | Professional, Scientific, and Technical Services
727 Legal services
728 Accounting, tax preparation, bookkeeping and payroll services
729 Architectural, engineering, and related services
737 Specialized design services
738 Computer systems design and related services
739 Management, scientific and technical consulting services
746 Scientific research and development services
747 Advertising and related services
748 Veterinary services
749 Other professional, scientific and technical services

757–779 | Management, Administrative and Support, and Waste Management services
757 Management of companies and enterprises
758 Employment services
759 Business support services
767 Travel arrangement and reservation services
768 Investigation and security services
769 Services to buildings and dwellings
777 Landscaping services
778 Other administrative and other support services
779 Waste management and remediation services

786–789 | Educational Services
786 Elementary and secondary schools
787 Colleges and universities, including junior colleges
788 Business, technical, and trade schools and training
789 Other schools, instruction, and educational services

797–829 | Health Care and Social Assistance
797 Offices of physicians

798 Offices of dentists
799 Office of chiropractors
807 Offices of optometrists
808 Offices of other health practitioners
809 Outpatient care centers
817 Home health care services
818 Other health care services
819 Hospitals
827 Nursing care facilities
829 Residential care facilities, without nursing
837 Individual and family services
838 Community food and housing, and emergency services
839 Vocational rehabilitation services
847 Child day care services

856–859 | Arts, Entertainment, and Recreation
856 Independent artists, performing arts, spectator sports, and related industries
857 Museums, art galleries, historical sites, and similar Institutions
858 Bowling centers
859 Other amusement, gambling, and recreation industries

866–869 | Accommodations and Food Services
866 Traveler accommodation
867 Recreational vehicle parks and camps, and rooming and boarding houses
868 Restaurants and other food services
869 Drinking places, alcoholic beverages

877–929 | Other Services (Except Public Administration)
877 Automotive repair and maintenance
878 Car washes
879 Electronic and precision equipment repair and maintenance
887 Commercial and industrial machinery and equipment repair and maintenance
888 Personal and household goods repair and maintenance
889 Footwear and leather goods repair
897 Barber shops
898 Beauty salons
899 Nail salons and other personal care services
907 Drycleaning and laundry services
908 Funeral homes, cemeteries and crematories
909 Other personal services
916 Religious organizations
917 Civic, social, advocacy organizations, and grantmaking and giving services
918 Labor unions
919 Business, professional, political, and similar Organizations
929 Private households

937–987 | Public Administration and Active Duty Military
937 Executive offices and legislative bodies
938 Public finance activities
939 Other general government and support
947 Justice, public order, and safety activities

948 Administration of human resource programs
949 Administration of environmental quality and housing programs
957 Administration of economic programs and space research
959 National security and international affairs
967 U.S. Army
968 U.S. Air Force
969 U.S. Navy
977 U.S. Marines

APPENDIX R. SEGMENT OBSERVATIONS FORM

Displaced New Orleans Residents Study: Segment Observations Form

PSU-SEGMENT: _____

IWER ID: _____

DATE LISTED: _____

Please review the "Estimated HUs" total (located in the bottom pane of the Listing Tab) before you fill out this form.

0 = None	**3 = 41-60%**
1 = 1-20%	**4 = 61-80%**
2 = 21-40%	**5 = 81-100%**

Please use the number codes above (0-5) to indicate the estimated percentage of:

1._____ HUs that are now UNOCCUPIED (that appear habitable but are unoccupied/empty) in the segment overall.

2._____TEMPORARY HUs such as travel trailers and RVs that are located in the segment overall. Note: Include manufactured houses as temporary HUs only if there is evidence on the lot (such as a foundation, driveway, or utility connection) of a more permanent structure recently damaged or destroyed.

> Travel Trailer/RV: A "travel trailer" is on wheels, whatever the make or model and includes RV's (where the unit has its own motor) as well as units where the trailer is pulled behind a car or truck.
>
> Manufactured Home: A manufactured home sits on the ground. Is clearly a prefab or 'kit' structure intended for temporary living space. There may or may not be indications that a more permanent structure is being built/repaired.

3._____ HUs that have been BADLY DAMAGED in the segment overall.

4._____ HU sites (in the original listing) that are now VACANT (completely cleared of buildings, but with some evidence of previous occupancy, such as a foundation, a driveway, or utility connections) in the segment overall.

OVER

5. Is there any indication that housing units (HUs) are being REPAIRED in this segment overall?

_____ YES. Please give estimate of the proportion using codes 0-5 noted above. _____

_____ NO

6. Is there any indication that housing units (HUs) are being CONSTRUCTED in this segment overall?

_____ YES. Please give estimate using codes 0-5 noted above. _____

_____ NO

Were any of the following conditions observed in this segment? Please circle YES or NO for every question. (Q7-9: 1=YES, 0=NO)

7.	Evidence of clutter or litter in the streets (including personal belongings, furniture, appliances, etc.).	YES	NO
8.	Any indications that power outages are occurring while you were listing?	YES	NO
9.	Evidence of vandalism, including graffiti?	YES	NO
10.	Open retail businesses?	YES	NO
11.	Heavy vehicle traffic?	YES	NO
12.	Police or private security patrols?	YES	NO

13. Other comments: _____

APPENDIX S. HOUSING UNIT OBSERVATIONS QUESTIONNAIRE

Displaced New Orleans Residents Study: Housing Unit Observations (for selected lines only)

1. Describe the type of this housing unit. Please select one.

   _____ 1 **Traditional structure**, fixed to a foundation, pilings, piers, or concrete slab, such as a house, apartment, condo, duplex, etc.

   _____ 2 **Modular/manufactured unit**, clearly a prefab or 'kit' structure intended for temporary living space. Typically not "fixed" to a foundation or slab except by utility connections--have no axles or wheels. [SKIP TO Q3]

   _____ 3 **Mobile home/house trailer**, generally sits on a concrete slab but may have wheels. Intended to reside on-site for long periods or permanently parked. [SKIP TO Q3]

   _____ 4 **Camper/travel trailer**, has one or more axles and wheels is towed by or sits in the bed of a pickup truck. Do not have their own motors. [SKIP TO Q3]

   _____ 5 **Recreational vehicle**, has axles, wheels and is powered and driven under own power, rather than towed behind another vehicle. [SKIP TO Q3]

   _____ 6 **None, vacant lot** [SKIP TO Q6]

   _____ 7 **Other**, any other structure not noted above that is being lived in temporarily (examples could be a garage, pole barn or other "out-building", bus, even a tent). Please specify
   _____
   _____. [SKIP TO Q3]

2. In what type of structure is this Housing Unit located? Please select one.

   _____ 1 Single family dwelling
   _____ 2 Duplex
   } GO TO Q3 AND Q4

   _____ 3 Small multi-unit (3-9 units)
   _____ 4 Medium multi-unit (10-49 units)
   _____ 5 Large multi-unit (50+ units)
   } SKIP TO Q5

3. Does the HU appear to be occupied? Please select one.

   _____ 1 Yes
   _____ 0 No [SKIP to Q6]

4. Is there evidence of children living in the Housing Unit? Please select one.

   _____ 1 Yes
   _____ 0 No

5. Is there evidence of an ADULT at home on weekdays? Please select one.

   _____ 1 Yes _____ 0 No

6. What barriers are there to accessing this Housing Unit? Please check all that apply.

_____ a Locked common entrance
_____ b Locked gates
_____ c Doorkeeper / Gatekeeper
_____ d Access through intercom
_____ e Guard dog(s)
_____ f Other (specify) _____

7. What sort of visible damage is there to the Housing Unit? If any of the categories below make the HU uninhabitable without major repairs, check "Major" damage. This will be a judgment call in some instances.

   Please check a damage level (none, minor, or major) for each Visible Damage Type category, and indicate whether repairs appear to be under way if there is any damage.

Visible Damage Type	**Level of Damage**			**Repairs Under Way?**	
	None (0)	Minor (1)	Major (2)	Yes(1)	No(0)
Roof				Yes(1)	No(0)
Windows				Yes(1)	No(0)
Walls				Yes(1)	No(0)
Foundation				Yes(1)	No(0)
Interior water damage				Yes(1)	No(0)
Interior mud damage				Yes(1)	No(0)
Outbuildings				Yes(1)	No(0)
Other (Specify) _____ _____				Yes(1)	No(0)

8. Are there **OTHER** Housing Units at **this address/ on this lot**?

_____ 1 Yes
_____ 0 No [SKIP TO END] THANK YOU, YOUR FORM IS COMPLETE

8a. If yes, **how many** other housing units are **at this address/ on this lot**? [PLEASE FILL IN A NUMBER FOR EACH STRUCTURE BELOW. IF NONE, ENTER "0."]

_____ 1 Traditional single-family structures with foundations or cement slabs
_____ 2 Duplex units
_____ 3 Apartment/condo units
_____ 4 Manufactured/modular homes
_____ 5 Mobile homes/house trailers
_____ 6 Campers/travel trailers
_____ 7 Recreational vehicles
_____ 8 Other units used as housing (Specify) _____

THANK YOU
