H53 For the rest of the interview, we would like to understand the process by which you provide a pregnancy examination. We would like to know everything you do, beginning with the arrival of the patient, waiting upon the patient and ending when she goes home. I shall describe the patient, and I will ask you a series of questions about activities you perform regularly. Once a section is complete, we are unable to go back and change answers. Now I will read out the case

- INSTRUCTIONS TO INTERVIEWER:
- 1. READ OUT CASE 2 TIMES, AND THEN ASK QUESTIONS H55 – H60.
 - 2. FIRST LISTEN TO THE RESPONDENT. ANY RESPONSE THAT HE OR SHE MENTIONS SPONTANEOUSLY SHOULD BE MARKED WITH CODE 1.
 - 3. AFTER THE RESPONDENT IS FINISHED WITH THE WHOLE QUESTIONNAIRE, TELL THE RESPONDENT THAT YOU ARE GOING TO REVIEW THE CASE AGAIN.
 - 4. START FROM THE BEGINNING AND READ THE CASE A SECOND TIME. ASK QUESTIONS H55 – H60.
 - 5. READ OUT ANY RESPONSES THAT HE/SHE DID NOT MENTION SPONTANEOUSLY THE FIRST TIME. CODE THE APPROPRIATE RESPONSE:

SECTION F: STATISTICS AND FINAL EXAMINATION GRADES

We would like to have information regarding the report of the UAN Score for the school year 2013/2014. In this study, we need the tests results of 25 students who will be selected at random. The sample selection stages areas follows:	
How to collect the national final examination mark for the school year 2013/2014	
<div><div><div>1. Collect the data from school for students who followed final examination test for mathematic and Indonesian subjects.</div><div>2. Grouped each mark based on the subject and arranged based on examination number, for senior high school if each major has each series number then it is compounded from science major added with social mayor or language major.</div><div>3. It is needed to get all final examination marks for all students who followed national examination.</div><div>4. If it's possible the marks of final examination can be copied to be borrowed to the base camp. Therefore if it is possible it can be entered in base camp to short the interview time in facilities so that move to other facilities.</div><div>5. The data entry for final examination marks should be suitable with the selected number based on random rules that is done automatically by CAPI</div><div>6. For entry the final examination marks, if there is selected number but has no final examination marks then it will be replaced with the previous number (it is the rules applied previously)</div></div><div>This proses is done automatically by CAPI</div><div><div>FIRST ROUND</div><div><div>1. Count the number of students who have taken the Ebtanas test for Indonesian Language and Mathematics. For example, participants for Indonesian Language= 53 students, therefore (N) = 53 students. Write the figure 53 in column 1a.</div><div>2. The interval of the selection[I] is a rounding up of (N/25) .Example N= 53, round up from(53/25) = 3. Write the figure 3 in column 2a.</div><div>3. The Consecutive Numbers of the First Selected Participants are:1,21,.....kl.(with k≤ N) In case N = 53, the First Round of Selected Participants have the Numbers: 3, 6, 9, 48, and 51. So the number of Selected Participants of the First round is: k = (53/3) = 17. Write the figure 17 in column 3a.</div><div>4. EXAMINE: Is the number of Selected Participants (K)= 25? If Yes -----> STOP No ----->continue to stage 5.</div><div>5. Thus, the number of participants still needed = X = (25 - k) In this case it has been calculated (seestage 3), that k = 17 .So, X = (25 - 17)= 8.</div><div>6. EXAMINE: if, X = 1 -----> To stage 7 if X > 1 to stage 8</div><div>7. Because X ≠1, for the purpose of determining the Number of the Final Selected Participants, another student is needed. Thus the Final Selected Participant is the Participant with the Number (I - (N - kl)).</div><div>8. SECOND ROUND: If at the sixth stage, X > 1----->, then Determine a New Interval [IB] which constitutes a rounding down from {N/(25-k)} In case N = 53, IB = rounding down {53/(25-17)} =7 . Write number 6 in column 4a.</div><div>9. The number of the First Selected Participant [NPP]= IB - (N - kl) In example N = 53, NPP =6 - (53 - 51) = 4. Write number 4 in column 5a.</div><div>10. The Consecutive Order of the Selected Participants in the Second Round is: NPP,NPP+IB,NPP + 2IB,ect. In example N = 53,the Consecutive Order of Selected Participants in the Second Round is:4, 10, 16, ...</div><div>11. BEFORE WRITING DOWN THE EBTANAS SCORES, EXAMINE:IF THERE ARE ANY SELECTED PARTICIPANTS IN THE FIRST ROUND. IF YES, REPLACE THE NUMBER BY THE NUMBER OF A PREVIOUS PARTICIPANT.</div><div>12. If the selected number has no data, replaced with the next number. For population ≤25 (N≤25) with selected number without data, enter "996" (because previous number has been selected)</div><div>13. Subsequently, write the UAN SCORE for eachselected participantin the second round</div></div></div></div>
