Dry field are all fields aside a rice field that is usually planted with secondary crops/*gogo* rice, such as garden plants, a plantation, a field, pond, dam, swamp or others that are not included in a state forest.

Plantation field is a dry field that is specifically to cultivate yearly plantation plants that are planted in a single, mixed or *tumpangsari* system.

Community forest field is a dry field aside from that is mentioned above specifically for cultivating forest plants either planted single, combined or *tumpangsari* such as a bamboo forest or a forest owned by the village. Including seashore swamp that is grown by *bakau/api-api* (mangrove trees) that is usually used for cultivating shrimp.

Land for building and the yard surrounding it is the land that surrounds the building and usually has a fence or a house as a boundary. If the boundary of the yard with the field is not clear then it is classified as a field.

Others: are land that is not included in the questions above such as roads, water canal, sports field, a lake and a cemetery.

Question 4: a certified land is based on the UUPA that is a land that has status as:

- Right to Own
- Right for Undertaking
- Right to Use Building
- Right for Manufacturing
- Right to Use

Question 5:

Bengkok/Pelungguh Land is a land owned by the village/kelurahan where the village administrator is given the authority as salary or to a formal village administrator as pension.

Village/Kelurahan Cash Land is land owned by the village/kelurahan where the income is used as funding source for the village/kelurahan.

Village/Kelurahan Cash Land that is written in question 5 is a Bengkulu or Village Cash Land that is located in the related village.

Question 7:

Critical Land is where the condition of the land endangers the stability and the performance of the water system also the natural environment and is a part of the land that is temporarily not used. Example: empty space land, land grown with coarse grass or polluted land.

BLOCK IX.B. THE CHANGE OF LAND STATUS DURING 3 YEARS

Question 1: Write in hectares with one figure behind the comma the dimension of rice field that has changed into dry agriculture land, housing, industry, establishment/offices, services and others

Question 2: Write in hectares with one figure behind the comma the dimension of a field/plantation that has changed into a rice field housing, industry, establishment/offices, services and others

Question 3: Write in hectares with one figure behind the comma the dimension of a fishpond that has changed into a rice field housing, industry, establishment/offices, services and others

Question 4: Write in hectares with one figure behind the comma a forest that has changed into a rice field housing, industry, establishment/offices, services and others

BLOCK X. SOURCE OF ENERGY IN THE AGRICULTURE FIELD

Question 1 and 2: Windmill for irrigation is an instrument that generates the flow of water/wind for watering by raising the water from a low location to a higher location.

The number of windmills and water pumps for irrigation is the number of windmills either water/wind or others and water pump for irrigation that occurs in the village/kelurahan area.

Question 5a: Demplot is a piece of land that is used for a personal demonstration for a farmer by applying agriculture technology to a small agriculture enterprise with a certain commodity (the size of each unit is between 0.1hectare till <1 hectare). There are several types of *Demplot*: agriculture, fishery, agriculture and forestry. The forestry *Demplot* is namely UPSDA/UPM (UPSDA = Usaha Pelestarian Sumber Daya Alam = Undertaking Preserving of Natural Source of Energy, UPM = Usaha Pertanian Menetap = Undertaking Permanent Agriculture).

Question 5b: Village Seedlings Field is a field in the village that is used for seeds/grow seedlings, *stek* (cutting a branch of a plant) or *okulasi* (a seedling technique) before it is planted in the productive field.

Balai Benih (Seedling Hall) is a research place that conducts research on seeds/seedlings.

Question 5c:

Cultivating seeds/seedlings is a person that has an expertise on producing seeds/seedlings where most of the production is sold to another party.

BLOCK XI. AGRICULTURE

A. FOOD CROP AGRICULTURE

Question 1: An agriculture food crop household is a household that undertakes rice, second crop, horticulture plants (vegetables, fruits and decorative plants), either undertake their own land or not; based on their own risk where a part or the whole production is sold.

Question 2: Food crop potentials is the widest land in the village planted with a type of food crop. If there are two types of crops that is planted in the same size of land then the potential sequence are based on which household is most involved. Fill in the potential of rice, second crop, vegetables and decorative plants that are in the village/kelurahan. Not included is the agriculture household that undertakes outside the village although it fulfills the minimal requirement

B. COMMUNITY PLANTATION

Question 1:

The number of Community Plantation households that are in the village area/kelurahan. The contents has to be less or the same as the household in the village/kelurahan.

A Community Plantation household is a household that cultivates plantation crops and aims to sell a part or all of the products to obtain income.

Question 2a till 2e: The potential of plantation crops is the types of plantation crops that have the widest land in the village. If there are crops that are planted in the same size of land then the potential sequence are based on which household is most involved.

Write down five types of plantation/commodity crops that is undertaken and owned by the household in the village/kelurahan. If the code of the crop is unknown then write down the name of the crop.

C. LIVESTOCK AND FISHERY

Question 1a and 1b: A household that raises livestock is a household that raises livestock/poultry disregarding whether the livestock/poultry is self-owned or not.

Question 2: The potential of livestock/poultry is based on the sequence of the number of livestock/poultry that is undertaken and raised by the household in the village/kelurahan.

Question 3: Freshwater fisherman household is a household that aims to cultivate seedlings and raises fish for sale either a part/the whole product or to obtain income/profit at their own risk (not included as a hobby).

Question 4: Salty water pond fisherman household is a household that raises fish, shrimp or others in a salty water pond and aims to sell a part/the whole product to obtain income/profit at their own risk.

Question 5: Keramba is an obstacle to raise fish put inside a river shaped as a box made out of woven bamboo. The fishes raised in a Keramba usually have grown to a full size.

Question 6a and 6b: A household undertaking fishery is a household that takes their own risk to conduct catching fish/water plants in the public waters or in the sea with an aim to sell a part/all products or to obtain income/profit.

D. FORESTRY

A forestry household is a household that undertakes the planting, raising, replanting/mutation of wooden plants, collecting products, timber and processing coal also other forest products in the forest.

E. AGRICULTURE BUSINESS

Agriculture business is an undertaking unit in a legal form either as a large establishment or a small establishment that moves in the agriculture field.

BLOCK XII. AGRICULTURE EQUIPMENT

Mobile agriculture equipment is recorded in the village that owns the equipment (such as a tractor) but the immobile equipment is recorded where the equipment is located.

Question 2a: Sprayer is equipment that is operated by hand or motor to spray liquid pesticide.

Question 2b: Duster is equipment to spray powdered pesticide.

Question 2c: Emposan is a blowing equipment to blow poisoned gas into rat holes.

Question 3e: Penyosoh beras is an equipment that is generated with a machine to clean rice grain with broken husks into *sosoh* rice.

Question 3g: RMU is a rice grinder that consists of a husker and a polisher assembled as one. The process of moving materials from one equipment to another uses an elevator.

Question 4a: Pemipil jagung is a mechanical device made out of wood, stone or iron generated by hand or machine to pick out corn from the cob.

Question 4b: Pemberas jagung is a mechanical device operated by hand or machine made out of iron/wood that is used to change corn grain into rice corn.

Question 5b: Chip maker is a mechanical device generated by machine/diesel made out of iron to change dried cassava (small dried cassava in the size of 1 – 2 cm) into chips.

Question 5c: Pellet maker is a mechanical device generated by machine/diesel to change dried cassava, *onggok*, tapioca and others into the form of pellets (livestock food).

Question 6a: Rubber mill: is a mechanical device to grind rubber generated with kerosene fuel/ electricity/diesel.

Question 6b: Smoke house: is a house installed with a device to smoke/dry rubber

Question 6c: Remilling: is a machine to roll out rubber and produces rubber in the form of sheets (fine rubber sheets) and crepe (wrinkled rubber sheets).

Question 6d: Crumb rubber maker: is a machine to produce rubber in the form of crumbs, including sponge.

BLOCK XIII. ECONOMY

Question A.a. 1 till 10: Agriculture household covers food crop agriculture, plantation, livestock, fishery and forestry.

Industrial/handicraft household is a household where one of the members or more has an activity to change raw/half made commodity into ready made that increases the value of the commodity.

Construction households such as the development/repairing/renovation/demolition of a building/house, road, bridge, railroad and train bridge, dam, water canal, airplane runway, dock construction, vehicle parking place, building communication network, including installing water pump, digging water well/W.C and others.
