I. PREFACE

A. General

In order to implement their tasks, the Central Bureau of Statistics is responsible to provide data needed for planning sectional and cross sectional development. To observe the situation, monitor and evaluate the implementation of the development program, the availability of continuous data is very helpful in making necessary improvements of an existing program. The needs for social data specifically on the community welfare has to be fulfilled in order to understand whether the development outcome has reached the community of all levels mainly on the aspects of daily requirements such as needs for clothing, housing, education, health, security and work opportunity.

The social data produced by BPS were gathered through various modes such as: Sensus Penduduk (SP), Survei Penduduk Antar Sensus (Supas), Survei Angkatan Kerja Nasional (Sakernas), and Survei Sosial Ekonomi Nasional (Susenas). Due to the broad coverage of community welfare also the constraints not all types of data could be gathered each year. Whereas from the available data/information each year, the progress of the developing program can be monitored and evaluated periodically but the system of data collection on to obtain the people's welfare, has to be improved. From all surveys conducted by BPS, Susenas is a survey that has the broadest social data coverage. The gathered data covers the field of education, health/nutrition, housing/environment, criminal, social culture activities, consumption and household income, tour trips and the society's opinion on their household welfare. From all data sets, demographic characteristic and household member's education are the only core data gathered each year. The remaining is classified into the target data (module) where the data is gathered in an average of a three-year period.

Questions in the core are aimed to obtain information on various welfare aspects of the people that are feasible to be included in the Susenas. The questions are selected from module questions where the feasibility has been tested in the field and hopefully covers the factors reflects the success of development. Basically Susenas 1993 is similar to the previous Susenas but specifically has similar characteristics in the data core of Susenas 1992. In the 1992 Susenas the core questions has expanded widely such as expenditures for food consumption and non-food consumption that is usually asked in the module is included into the core. The consequences on the expansion of questions are the increase in the survey methodology and exercise procedures, local management on supervision and guidance also enumeration.

Susenas data has an increasingly number of uses and implementation is expanding widely of which the results are essential in formulating policies. The Central Bureau of Statistics is assigned to provide of quality data, complete and on time.

B. Objectives

In general the objectives of collating data through Susenas is providing data of community welfare (Kesra) that reflects the social and economic condition of the community. Specifically the welfare data is for the internal needs of BPS to develop welfare indicators in each Regency/municipality. The objectives of Susenas 1993 are the data consumption/household expenditures. The household data consumption/expenditures is classified into food consumption and non-food consumption disregarding the origin of the goods (purchased, self produced or gifted) and is limited to the household needs only. The consumption/expenditures for the needs of business or handed to another party is not included. Information on the household income is differentiated into the types of income source such as salary/wages, agriculture business, non-agriculture business and other types of income.

C. Scope

The 1993 Susenas is conducted in all areas in Indonesia with the sample size of 202,592 households at provinces in the urban and rural area. The household samples are divided into core samples (202,592) and module (65, 664). The number of the same core with the total sample is the module sample is a part of core

sample but with a smaller total number. In other words all selected core samples where 136,928 specific households are selected Cores only. The 65,644 selected households for enumeration are simultaneously Core also Module (Core + Module). Households that are located in specific enumeration areas and specific households that are located in a regular enumeration area are not chosen as samples. The core data is collected using the VSEN93.K List and the module data uses the VSEN93.M List.

D. Schedule of Activities

| Activity | Date |
|---|-------------------------------|
| 1. Send document to BPS | October 1- 15, 1992 |
| 2. Training | |
| a. Main instructor | October 1-9, 1992 |
| b. Instructor | October 24 – November 1, 1992 |
| -1 st shift | November 2 – 10 November 1992 |
| -2 nd shift | November 13-30, 1992 |
| c. Area Officials | |
| 3. Implementation | |
| a. Household listing | December 1-31, 1992 |
| b. Household sampling | December 15- January 5, 1993 |
| c. Household enumeration | January 1993 |
| 4. List Checking | |
| a. Sub reGENCY Statistic Office | February 1993 |
| b. Provincial Statistic Office | March 1993 |
| 5. Send selected Core & Module documents that has been filled in and checked by BPS | March 1993 |
| 6. Training on editing – coding and data entry VSEN93K at the provinces | February - March 1993 |
| 7. Process the VSEN93.K List at the province | April-August 1993 |
| 8. Send clean data to BPS | Early September 1993 |

II. METHODOLOGY

A. Type of Data Collected

a. Core Data

Starting from 1991/1992 the Susenas that was conducted in February 1992 covers the expanded core data. The core data covered in Susenas 1993 is similar to the previous Susenas (1992). The core data are:

1. Characteristics on members of the household (name, relationship with head of the household, sex, age, marital status, tour trip, crime victim and school participation)
2. Characteristics of health and education of the household members;
3. Characteristics of economic activities and the workforce of household members over the age of 10 years
4. Characteristics on fertility of ever married women and information on Family Planning methods used by the married women members of the household
5. Characteristics on the quality of household buildings, household facilities and environment.
6. Characteristics on the average household consumption and main source of household income

b. Module Data

The data module collected in Susenas 1993 covers: Detailed data on consumption and household expenditures also the household income. Consumption and expenditures are not limited to the commodity of food materials and ready-made food but also non-food commodities. The sources of income of the household recorded here are from various sources such as agriculture, industry/handicraft, trade etc.

B. Outline Sample

The outline sample (namely *KCI = Kerangka Contoh Induk = Main Outline Sample*) for selecting the Susenas 1993 samples is the list of the selected enumeration areas of the Population Census 1990. The number of enumeration areas in the KCI is 20% of the main outline (*MFD = Master File Desa = Village Master File*). Selecting approximately 20% of the enumeration area is based on the **probability proportional to size (pps)**, where each enumeration area has the probability to be selected is proportional to the number of the households. In the MFD which is the main outline for selecting the sample units at the first phase, all sub-districts in each regency/municipality is sequenced based on the geographical location. This is also valid for the sequence of villages in each sub-district and the sequence of enumeration areas in each village.

To estimate the Core data at the regency/municipality level and Module data at the provincial level; and to ease the sample selection, a KCI is formed at the provincial level whereas the sample obtained will be proportional at each regency/municipality. At the first stage, an enumeration area is selected for the needs of core and module enumeration. The next phase is adding samples to each regency/municipality to obtain estimation at the regency/municipality level. In each regency/municipality the areas are not differentiated between urban and rural areas on the contrary the provincial level the areas are differentiated in urban and rural areas.

C. Sample Design

The procedures on selecting samples are through 3 phases. In the first phase a number of enumeration areas are systematically selected from the KCI which means is pps towards MFD. The second phase is a segment group is selected pps with the size of number of households in the ST'93-LP1 List. The third phase is: 16 households are taken systematically from each segment group. The first phase is conducted by BPS, the second phase by the regency/municipality Statistic Office and the supervisor (see Picture 1) conducts the third phase.

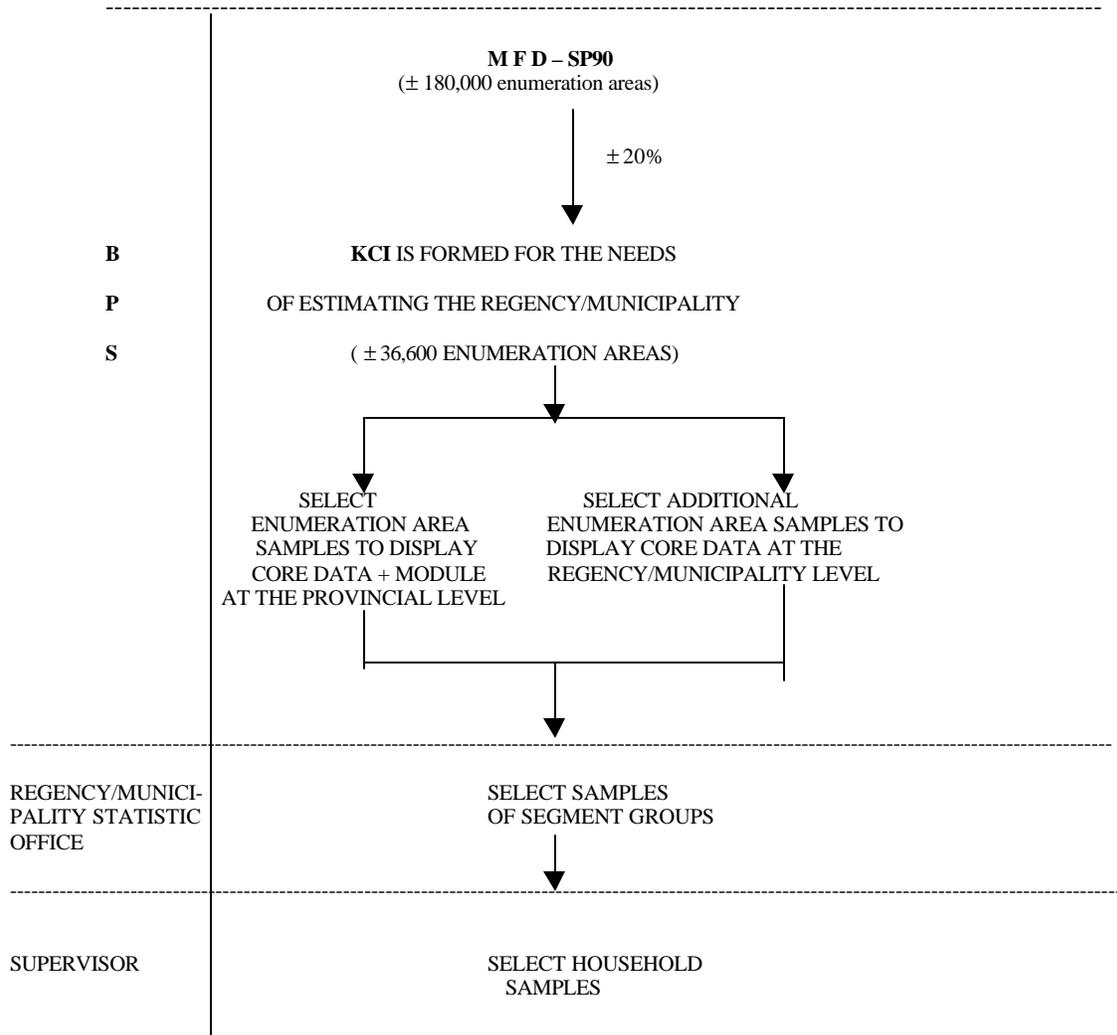

D. Formation and Selecting Segment Group

Before selecting segment groups, the formation of segment groups has to be conducted first. The basic for this action is:

- a. The sketched map of enumeration area was designed in October 1988 (mapping enumeration areas at provincial capital cities and regencies) and in October 1989 (mapping of 20% of the enumeration areas at the regencies), that has been up dated during the preparation of Sensus Pertanian 1993 (Agriculture Census 1993).
- b. Each segment group has to have clear boundaries either natural or man made boundaries, that covers one segment or more that are located close together with a number of approximately 70 households. After the segment groups are formed the Regency/municipality Statistic Office chooses one segment group by PPS with the size of the number of households in each segment group.

Picture 1

FLOWCHART ON SELECTING THE SUSENAS 1993 SAMPLE

Example on the Formation of Segment Groups

Based on the enumeration area sketch 04 (see Picture 2) and ST93-LP1, several information are obtained as follows:

| Segment Number | S 4.1 | S 4.2 | S 4.3 | S 4.4 | S 4.5 | S 4.6 | S 4.7 | Total |
|---|-------|-------|-------|-------|-------|-------|-------|-------|
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) |
| Number of Households ST93-LP1 or ST93-LP2 Lists | 2 | 31 | 17 | 26 | 54 | 46 | 23 | 199 |

Guided by the concept on the formation of segment groups and by using the number of households that are in each segment, 3 segment groups could be formed. The segment groups are namely: segment group number 1 consists of segments that are close together which are segment 1, segment 2 and segment 7: $S 4.1 + S 4.2 + S 4.7$ with number of households = $2 + 31 + 23 = 56$. Segment group number 2 consists of segment 3 and 6 that are located closely: $S 4.3 + S 4.6$, with the number of households = $17 + 46 = 63$. Segment group number 3 consists of $S 4.4 + S 4.5$ with the number of households = $26 + 54 = 80$.

After segment groups are formed the selection of segment groups are conducted by using the following list:

| SERIAL NUMBER OF SEGMENT GROUPS | SEGMENT NUMBER | NUMBER OF HOUSEHOLDS | CUMULATIVE NUMBER OF HOUSEHOLDS | RANDOM NUMBER |
|---------------------------------|-----------------------|----------------------|---------------------------------|---------------|
| (1) | (2) | (3) | (4) | (5) |
| 1. | S 4.1 + S 4.2 + S 4.7 | 56 | 1-56 | |
| 2. | S 4.3 + S 4.6 | 63 | 57 – 119 | 096 |
| 3. | S 4.4 + S 4.5 | 80 | 120 – 199 | |

The selected random number is determined by using the Random Number Table. If the number of households in the selected enumeration areas is 3 digits, determine the random number in 3 digits. Example: if from the selected Table page 2 row 13 column 2 – 4 is 979, because it is larger than the number of households in the enumeration area, find the next number downwards on the first selection (979) until meets 096. If random number 096 is selected, the selected segment group is located in the cumulative interval of the household segment group. An enumerator conducts household listing in segment 3 and 6 (S 4.3 and S 4.6).

Determining the Selected Enumeration Areas of Susenas 1993 Core, Susenas 1993 Core + Module and Sakernas 1993.

In order to determine the Selected Enumeration Areas of Susenas 1993 Core, Susenas 1993 Core + Module also for Sakernas 1993, it is based on the Sample Code Number (NKS = Nomor Kode Sampel) of Susenas 1993. The NKS Susenas 1993 consists of 4 digits with the requirements as follows:

- If the first digit of the Susenas 1993 Sample Code Number is 0, it is selected for Core only.
- If the first digit of the Susenas 1993 Sample Code Number is 1 and 2, it is selected for Core + Module
- If the first digit of the Susenas 1993 Sample Code Number is 1, it is selected for the second quarter period of Sakernas (February 1993)
- If the first digit of the Susenas 1993 Sample Code Number is 2, it is selected for the third quarter period of Sakernas (May 1993)

The enumeration area list and selected segment groups for the 3rd quarter period of Sakernas (August 1993) and the 4th quarter period (November 1993) will be determined later. The results of household

listing in Susenas '93 in the selected segment groups is the outline sample for selecting households in Susenas '93. Specifically for Core and Module enumeration areas the selection of households for the 1st quarter period of Sakernas (where the first digit of the NKS Susenas 1993 is 1) and the 2nd quarter (where first digit of the NKS Susenas 1993 is 2) is also conducted. In the process of household selection, the RI (Random Start) between Susenas and Sakernas has to be distinct, so that the selected household between Susenas and Sakernas are different. See Attachment 6 for the example on the format of the selected enumeration area for Susenas 1993 and Sakernas 1993.

E. Estimation Method

The design of sample selection starting from the first phase till the last phase uses the opportunity principle with the number of households as the foundation of selecting the sample units so that the design of self-weighting is still persisted.

The presentation of Core data from each regency/municipality is conducted by disregarding whether the area is an urban area (u) or a rural area (r), but the Core and Module data at the provincial level is differentiated based on the urban and rural area.

The estimation on the average value and total value parameter module for each urban and rural area at the provincial and regency/municipality level is as follows:

$$\hat{\bar{Y}} = \frac{1}{16w} \sum_{i=1}^{16} \sum_{j=1}^k Y_{ijk}$$

$$\hat{Y} = \hat{P} \hat{\bar{Y}}$$

$$\hat{\bar{Y}} = \text{estimated average value parameter}$$

$$\hat{Y} = \text{estimated total value parameter}$$

$$w = \text{total selected enumeration area}$$

$$Y_{ijk} = \text{characteristic value of the } k - \text{household, The } j \text{ Segment group and the } i \text{ enumeration area}$$

$$\hat{P} = \text{estimated total population or households}$$

Based on the estimation value above specifically at the provincial level the estimated value at the urban and rural areas is as follows:

$$\hat{\bar{Y}}_{u+r} = \frac{\hat{Y}_u}{\hat{P}_u} + \frac{\hat{Y}_r}{\hat{P}_r}$$

$$\hat{Y}_{u+r} = \hat{Y}_u + \hat{Y}_r$$

F. Types of Lists and Documents Used

| No. | Type of Lists | Usage | By whom | Number of Copies | Stored at |
|-----|---------------|---|-------------------------|------------------|-----------------------------------|
| 1. | VSEN93.L | Household Listing | Enumerator | 1 | Regency Statistic Office |
| 2. | VSEN93.DSRT | Selected household sample list | Supervisor/Investigator | 1 | BPS |
| 3. | VSEN93.K | Household enumeration | Enumerator | 1 | Regency Statistic Office BPS*) |
| 4. | VSEN93.M | Household enumeration | Enumerator | 1 | BPS |
| 5. | VSEN93.LPK | Record the consumption of ready-made food | Enumerator | 1 | BPS |

*) The samples selected without module (approximately 137,000 documents) are stored and processed at the Regency Statistic Office. The samples with module (65,664 documents) are sent to BPS.

Manual books that are used:

1. Manual Book I: Working Manual for Head of Provincial and Regency/Municipality Statistic Office
2. Manual Book IIA: Core Enumeration Manual
3. Manual Book IIB: Core Supervisor Manual
4. Manual Book IIIA: Core and Module Enumeration Manual
5. Manual Book IIIB: Core and Module Supervisor Manual
6. Manual Book IV: Core Manual on Village Potentials

II. FIELD ORGANIZATION

A. The People Responsible for Survey Implementation in the Local Areas

The people responsible for the survey at the local areas are similar to the previous surveys conducted by the Central Bureau of Statistics (BPS) which are the Head of Provincial Office assisted by Head of Statistic Office at the regency/municipality. The responsibilities cover the technical also the administrative sector, such as appointing the officers till gathering documents at the Central Bureau of Statistics also other aspects related in this survey including field supervision.

B. Field Officers

Enumerators in Susenas 1993 are classified into two namely the mantri statistik or the sub-regency staff and mitra statistik (hired worker) with the following requirements:

- 1) For the selected sub-regency core + module, the enumeration was conducted by mantri statistik or the sub-regency staff or other officers that are appointed and has a good working performance. The Supervisors/investigators are Head Sections/Sub-sections or the office staff of regency/municipality Statistic Office. Each supervisor/investigator is in charge of 3 enumerators.
- 2) For the selected sub-regency core only, the mantri statistik (sub-regency staff) acts as Supervisor Core Enumeration and enumeration is conducted by mitra statistik (hired worker). If the selected enumeration area at the selected core sub-regency is more than two or less, the enumeration is still conducted by mantri statistik (sub-regency staff).
- 3) Listing households at all selected sub-regencies are conducted by the representative enumerators

C. Training

Training will be conducted at the training center towards enumeration officers also the instructors before the implementation of enumeration.

1. Main Instructor Training (Intama) conducted in Jakarta on October 1st – 9th, 1992
2. National Instructor (Innas) will be conducted in Jakarta through 2 phases: first phase October 24th – November 1st 1992 and the second phase on November 2nd – 10th, 1992.
3. Training on Enumerator and Supervisor Officers
The training in the local areas are conducted for 8 effective days. The training is conducted at the training centers of each province on November 1st – 30th 1992. On the end of each training a test is conducted to select candidate officers that fulfill requirements to be elected as officers. A supervisor could also be an enumerator based on the instructor's suggestion to Head of the Statistic Office, if there are candidate officers at the survey location when tested showed low performance.

The schedule of training is as follows:

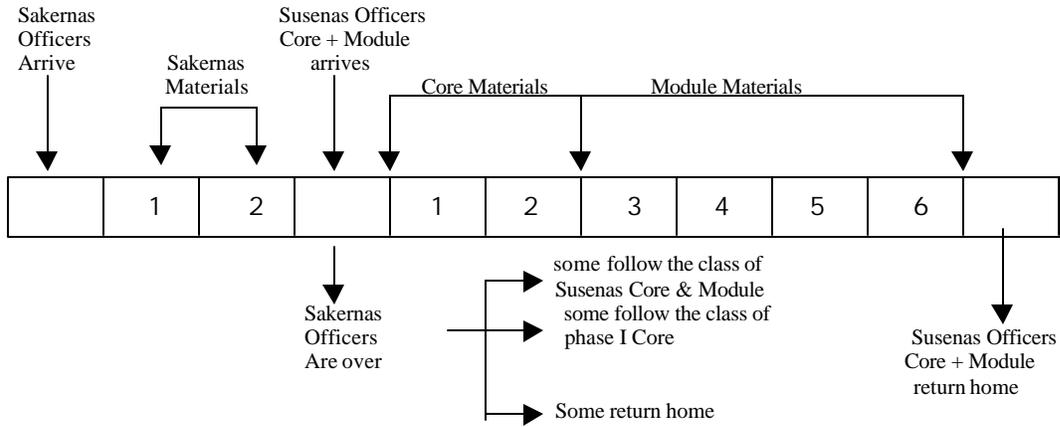

The number of effective days on training for field officers for each topic is as follows:

- Sakernas = 2 days
- Susenas Core + Module = 6 days
- Susenas Core = 2 days

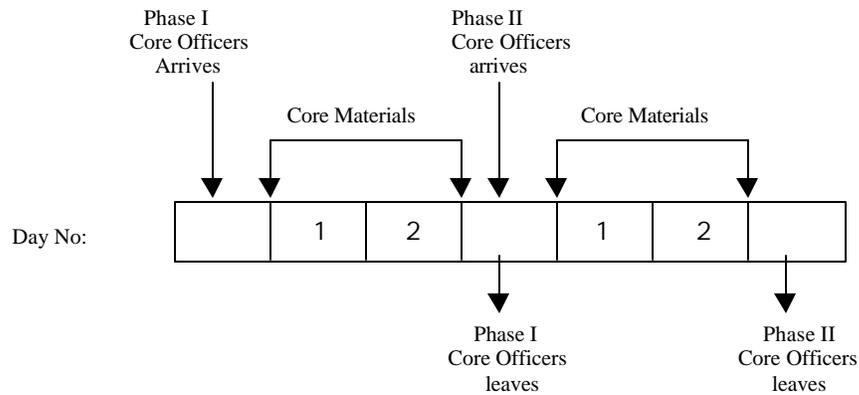

The number of training days are counted as 10 days if an officer follows the training of all 3 topic (8 effective days added with 2 days round trip), for those that only follow the Sakernas material it is only counted as 4 days and so on. There are no specific training for Supervision, it could be conducted during 2 days round trip or the 4 days of Module.

The training days are scheduled as follows:

a. Sakernas officers class and Susenas Core + Module

b. Officers class specifically for Core

Example: The estimation on the number of classes and National Instructors for the Province of Aceh is (see attachment 5)

- Sakernas = 5 classes
- Susenas Core + Module = 3 classes
- Susenas Core only = 6 classes (2 phases 3 classes each)
- Number of instructors = 6 people (A, B, C, D, E, F)

Day No.:

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|----|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
|---|---|---|---|---|---|---|---|---|----|

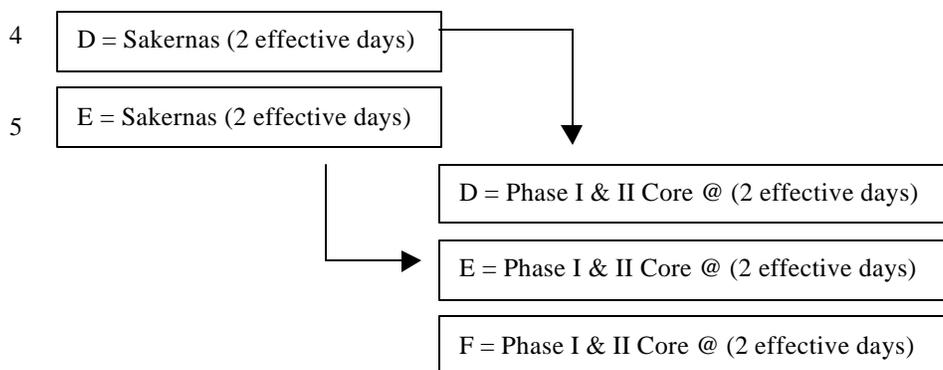

Instructor:

- 1

| |
|---|
| A = Sakernas + Core/Module = (2 + 6) effective days |
|---|
- 2

| |
|---|
| B = Sakernas + Core/Module = (2 + 6) effective days |
|---|
- 3

| |
|---|
| C = Sakernas + Core/Module = (2 + 6) effective days |
|---|

Note:

If a number of instructors teach the Sakernas officers also the Core officers, the number of instructors is 6 people. The number of instructors could be more than 6 people if the instructor that teaches Sakernas are different from those that teach Core (for example the training time of Sakernas and Core officers are simultaneously) or the number of Core classes from phase I and phase II are different. In this matter please remember that the maximum number of Innas (National Instructors) is as mentioned in Attachment 5. The number of training days and the available budget in a DIP (*Daftar Isian Proyek = Project List Form*) has to be studied by The Provincial Statistic Office, due to no extra funds are available. The SPJ (*Surat Permohonan Jalan = Travel Request Letter*) and the realization on the length of training also the supporting documents has to be appropriate.

D. Sending Documents

1. The Central Bureau of Statistics will send documents for training and field implementation to the Provincial Statistic Office.
2. The Provincial Statistic Office distributes the documents needed for the fieldwork to the Regency/municipality Statistic Office.
3. The Regency/municipality Statistic Office distributes the documents to the supervisors and the enumerators will receive the documents from the supervisors based on their work load.
4. All filled in documents has to be submitted to the Supervisor based on the determined schedule, then sent to the regency/municipality Statistic Office for further checking. Then the documents will be sent to BPS after being checked.

For regency levels that have facilities sending documents directly to the central (more efficient) is urged to do so. The Provincial Statistic Office has to coordinate the sending costs. The regency Statistic Office has to report (send carbon copies) on the Questioned documents sent to the central to the Provincial Statistic Office.

E. Budget and Training Implementation

The budget for officers at each province is based on the condition of each area. The training budget for the officers is burdened to the Susenas DIP. The budget for conducting enumeration and individual supervision for the wages of household enumeration is allocated to each officer with the following requirements:

- a. Enumeration at the urban areas
- b. Enumeration at the rural areas, but is accessible to public transportation
- c. Enumeration at the rural areas, that are located far and the access to public transportation is difficult.

Requirements to become an Instructor:

1. Works in the field that is related to survey matters (central) or a staff in the field of social statistic and population (local area)
2. Minimum is a graduate from the Academy of Statistic Studies (AIS) or a bachelor
3. Has followed the training of Susenas 1993 at a training center in Jakarta and has passed the final exams during the last training to be elected as an instructor.

The main duties of an instructor is to train the candidates of supervisors and enumerators at the training center at the province, in order to produce officers that understand and are able to conduct their duties at a satisfactory. The Central Bureau of Statistics in mid October 1992 hopefully receives the announcement on the names of instructor candidates.

F. Field Implementation

1. Household listing and household sample selection is conducted between the first week of December till the last week of December 1992, the interviewing of selected households are conducted in January 1993.
2. The checking of the enumeration results are conducted by the regency/municipality Statistic Office during February 1993.
3. The results of enumeration data that has been checked are divided into:
 - a. VSEN93.K List from selected core households only is stored at the province to be processed.
 - b. VSEN93.K and VSEN93.M Lists from selected Core-Module are sent to BPS by the end of March 1993 at the latest.

G. Data Processing

1. On February – March 1993 approximately, the training on the editing-coding and data entry of VSEN.K List (specifically for selected enumeration areas core only) will be conducted at the provinces.
2. On April – August 1993 the data entry of VSEN93.K List (specifically for selected enumeration areas core only) will be conducted at the provinces.
3. On November 1994 all data of the results on processing the VSEN93.K Susenas 1993 data is sent to the provinces in the form of diskettes.
